Part I

Ergodicity and Mixing. Examples of Dynamic Systems 1

Chapter 1

Basic Definitions of Ergodic Theory 3

- §1. Definition of Dynamical Systems 3
- §2. The Birkhoff–Khinchin Ergodic Theorem. Ergodicity 11
- §3. Nonergodic Systems. Decomposition into Ergodic Components 16
- §4. Averaging in the Ergodic Case 18
- §5. Integral and Induced Automorphisms 20
- §6. Weak Mixing, Mixing, Multiple Mixing 22
- §7. Unitary and Isometric Operators Adjoint to Dynamical Systems 26
- §8. Dynamical Systems on Compact Metric Spaces 36

Chapter 2

Smooth Dynamical Systems on Smooth Manifolds 43

- §1. Invariant Measures Compatible with Differentiability 43
- §2. Liouville's Theorem and the Dynamical Systems of Classical Mechanics 47
- §3. Integrable Dynamical Systems 58

Chapter 3

Smooth Dynamical Systems on the Torus 64

- §1. Translations on the Torus 64
- §2. The Lagrange Problem 69
- §3. Homeomorphisms of the Circle 73
- §4. The Denjoy Theorem 83
- §5. Arnold's Example 87
- §6. The Ergodicity of Diffeomorphisms of the Circle with Respect to Lebesgue Measure 92

Chapter 4	
Dynamical Systems of Algebraic Origin	96
§1. Translations on Compact Topological Groups	96
§2. Skew Translations and Compound Skew Translations on Commutative Compact Groups	100
§3. Endomorphisms and Automorphisms of Commutative Compact Groups	104
§4. Dynamical Systems on Homogenous Spaces of the Group $SL(2, \mathbb{R})$	112
Chapter 5	
Interval Exchange Transformations	122
§1. Definition of Interval Exchange Transformations	122
§2. An Estimate of the Number of Invariant Measures	124
§3. Absence of Mixing	127
§4. An Example of a Minimal but not Uniquely Ergodic Interval Exchange Transformation	132
Chapter 6	
Billiards	138
§1. The Construction of Dynamical Systems of the Billiards Type	138
§2. Billiards in Polygons and Polyhedra	143
§3. Billiards in Domains with Convex Boundary	149
§4. Systems of One-dimensional Point-like Particles	152
§5. Lorentz Gas and Systems of Hard Spheres	154
Chapter 7	
Dynamical Systems in Number Theory	157
§1. Uniform Distribution	157
§2. Uniform Distribution of Fractional Parts of Polynomials	159
§3. Uniform Distribution of Fractional Parts of Exponential Functions	164
§4. Ergodic Properties of Decompositions into Continuous Fractions and Piecewise-monotonic Maps	165
Chapter 8	
Dynamical Systems in Probability Theory	178
§1. Stationary Random Processes and Dynamical Systems	178
§2. Gauss Dynamical Systems	188
Chapter 9	
Examples of Infinite Dimensional Dynamical Systems	193
§1. Ideal Gas	193
§2. Dynamical Systems of Statistical Mechanics	200
§3. Dynamical Systems and Partial Differential Equations	223

Part II**Basic Constructions of Ergodic Theory** 225

Chapter 10

Simplest General Constructions and Elements of Entropy Theory of Dynamical Systems 227

- §1. Direct and Skew Products of Dynamical Systems 227
- §2. Metric Isomorphism of Skew Products. Equivalence of Dynamical Systems in the Sense of Kakutani 233
- §3. Time Change in Flows 235
- §4. Endomorphisms and Their Natural Extensions 239
- §5. The Rohlin–Halmos Lemma 242
- §6. Entropy 246
- §7. Metric Isomorphism of Bernoulli Automorphisms 258
- §8. K -systems and Exact Endomorphisms 280

Chapter 11

Special Representations of Flows 292

- §1. Definition of Special Flows 292
- §2. Statement of the Main Theorem on Special Representation of Flows and Examples of Special Flows 295
- §3. Proof of the Theorem on Special Representation 300
- §4. Rudolph's Theorem 309

Part III**Spectral Theory of Dynamical Systems** 323

Chapter 12

Dynamical Systems with Pure Point Spectrum 325

- §1. General Properties of Eigen-Values and Eigen-Functions of Dynamical Systems 325
- §2. Dynamical Systems with Pure Point Spectrum. The Case of Discrete Time 328
- §3. Dynamical Systems with Pure Point Spectrum. The Case of Continuous Time 334

Chapter 13

Examples of Spectral Analysis of Dynamical Systems 338

- §1. Spectra of K -automorphisms 338
- §2. Spectra of Ergodic Automorphisms of Commutative Compact Groups 340
- §3. Spectra of Compound Skew Translations on the Torus and of Their Perturbations 342
- §4. Examples of the Spectral Analysis of Automorphisms with Singular Spectrum 347
- §5. Spectra of K -flows 353

Chapter 14	
Spectral Analysis of Gauss Dynamical Systems	356
§1. The Decomposition of Hilbert Space $L^2(M, \mathfrak{E}, \mu)$ into Hermite–Ito Polynomial Subspaces	356
§2. Ergodicity and Mixing Criteria for Gauss Dynamical Systems	368
§3. The Maximal Spectral Type of Unitary Operators Adjoint to Gauss Dynamical Systems	371
§4. Gauss Dynamical Systems with Simple Continuous Spectrum	373
§5. Gauss Dynamical Systems with Finite Multiplicity Spectrum	379
Part IV	
Approximation Theory of Dynamical Systems by Periodic Dynamical Systems and Some of its Applications	387
Chapter 15	
Approximations of Dynamical Systems	389
§1. Definition and Types of Approximations. Ergodicity and Mixing Conditions	389
§2. Approximations and Spectra	395
§3. An Application of Approximation Theory: an Example of an Ergodic Automorphism with a Spectrum Lacking the Group Property	398
§4. Approximation of Flows	404
Chapter 16	
Special Representations and Approximations of Smooth Dynamical Systems on the Two-dimensional Torus	408
§1. Special Representations of Flows on the Torus	408
§2. Dynamical Systems with Pure Point Spectrum on the Two-dimensional Torus	418
§3. Approximations of Flows on the Torus	425
§4. Example of a Smooth Flow with Continuous Spectrum on the Two-dimensional Torus	434
Appendix 1	
Lebesgue Spaces and Measurable Partitions	449
Appendix 2	
Relevant Facts from the Spectral Theory of Unitary Operators	453
Appendix 3	
Proof of the Birkhoff–Khinchin Theorem	459
Appendix 4	
Kronecker Sets	463
Bibliographical Notes	467
Bibliography	475
Index	483
