Contents

1. Stability and approximation 1
   1.1 Lower estimates derived from the Riesz-Dunford functional calculus 2
   1.2 Lower estimates for the distance to $\mathcal{N}_k(\mathcal{H})$ 7
   1.3 Lower semicontinuity of the rank 8
   1.4 Stability properties of semi-Fredholm operators 9
   1.5 On invariance and closure of subsets of $\mathcal{L}(\mathcal{H})$ 11
   1.6 Notes and remarks 11
2. An apéritif: Approximation problems in finite dimensional spaces 13
   2.1 Closures of similarity orbits in finite dimensional spaces 14
      2.1.1 The nilpotent case 16
      2.1.2 Proof of Theorem 2.1 17
      2.1.3 The lattice $(\mathcal{N}(\mathbb{C}^k)/\#, <)$ 18
      2.1.4 Closures of similarity orbits of finite rank operators 20
   2.2 The distance from the set of all non-zero orthogonal projections to $\mathcal{N}(\mathcal{H})$. 21
      2.2.1 The limit case 21
      2.2.2 On the exact values of δ_k and η_k 25
      2.2.3 A companion problem: the distance from the set of all non-zero idempotents to $\mathcal{N}(\mathcal{H})$ 26
   2.3 On the distance to $\mathcal{N}_k(\mathcal{H})$ 30
      2.3.1 A general upper bound 30
      2.3.2 Two illustrative examples 32
      2.3.3 An example on approximation of normal operators by nilpotents . . 35
      2.3.4 On the distance to a similarity orbit 38
   2.4 On the distance from a compact operator to $\mathcal{N}(\mathcal{H})$ 40
   2.5 Notes and remarks 41
3. The main tools of approximation 48
   3.1 The Rosenblum operator: $X \to AX - XB$ 48
      3.1.1 Linear operator equations 48
      3.1.2 Approximate point spectrum of a sum of commuting operators . . . 49
      3.1.3 Local one-side resolvents in $\mathcal{L}(\mathcal{H})$ 52
      3.1.4 The left and the right spectra of τ_{AB} 58
      3.1.5 Rosenblum-Davis-Rosenthal corollary 61
      3.1.6 The maximal numerical range of an operator 62
      3.1.7 The norm of τ_{AB} 65

3.2 Generalized Rota's universal model 67
3.3 Apostol's triangular representation 70
3.4 Correction by compact perturbations of the singular behavior of operators . 82
3.5 Apostol-Foiaş-Voiculescu's theorem on normal restrictions of compact perturbations of operators 88
3.5.1 Schatten p-classes 88
3.5.2 Normal restrictions 89
3.5.3 Density of sets of operators with bad properties 91
3.6 Notes and remarks 92
4. Two results borrowed from the theory of C^*-algebras 99
4.1 Essentially normal operators 99
4.1.1 Brown-Douglas-Fillmore theorem 99
4.1.2 Berger-Shaw trace inequality 100
4.1.3 Examples of essentially normal operators 104
4.1.4 An application to approximation problems 106
4.2 Matrix models for operators 107
4.3 Spectra of compact perturbations of operators 110
4.4 Voiculescu's theorem 112
4.5 Closures of unitary orbits 114
4.5.1 Operator-valued spectrum and unitary orbits 114
4.5.2 Concrete examples of closures of unitary orbits 116
4.5.3 On normal and quasinilpotent restrictions 117
4.6 Irreducible operators 119
4.7 Notes and remarks 121
5. Limits of nilpotent and algebraic operators 130
5.1 Limits of nilpotent operators 130
5.1.1 Normal limits of nilpotents 130
5.1.2 Spectral characterization of $\mathcal{N}(\mathcal{H})^-$ 133
5.2 Closures of similarity orbits of normal operators with perfect spectra . . 135
5.3 Limits of algebraic operators 136
5.4 Normal operators in closures of similarity orbits 137
5.5 Sums of two nilpotents 139
5.6 The Apostol-Salinas approach: an estimate for the distance to $\mathcal{N}_k(\mathcal{H})$ . . 142
5.7 Salinas's pseudonilpotents 147
5.8 Limits of nilpotent and algebraic elements of the Calkin algebra 151
5.9 On the spectra of infinite direct sums of operators 153

5.10 Notes and remarks 155
6. Quasitriangularity 158
6.1 Apostol-Morrel simple models 158
6.2 Quasitriangular operators 163
6.2.1 Equivalence between the formal and the relaxed definitions of quasitriangularity 164
6.2.2 Two lower estimates for the distance to (QT) 165
6.2.3 Spectral characterization of quasitriangularity 169
6.3 Biquasitriangular operators 169
6.3.1 Block-diagonal and quasidiagonal operators 170
6.3.2 Characterizations of biquasitriangularity 171
6.4 On the relative size of the sets (QT), $(QT)^*$, (BQT), $[\mathcal{N}(\mathcal{H}) + \mathcal{K}(\mathcal{H})]$ and $\mathcal{N}(\mathcal{H})^-$ 177
6.5 A Riesz decomposition theorem for operators with disconnected essential spectrum 178
6.6 Notes and remarks 181
7. The structure of a polynomially compact operator 193
7.1 Reduction to the (essentially) nilpotent case 193
7.2 The structure of a polynomially compact operator 195
7.3 Restrictions of nilpotent operators 199
7.4 Operators similar to Jordan operators 202
7.5 A similarity invariant for polynomially compact operators 205
7.6 Nice Jordan operators 209
7.7 Notes and remarks 220
8. Closures of similarity orbits of nilpotent operators 221
8.1 Universal operators 221
8.1.1 Universal quasinilpotent operators 221
8.1.2 Universal compact quasinilpotent operators 226
8.2 Compact perturbations of not nice operators 226
8.3 Quasinilpotents in the Calkin algebra 230
8.3.1 General quasinilpotents 230
8.3.2 Nice elements of the Calkin algebra 237
8.4 Compact perturbations of nice Jordan operators 238
8.4.1 Nice Jordan nilpotents 239
8.4.2 Nilpotents of order 2 243
8.4.3 Quasinilpotent perturbations 244

8.4.4 Universal operators in $\mathcal{N}_{k,h}^{+}(\mathcal{H})$ 248
8.4.5 A general criterion for universality 254
8.5 Separation of isolated points of the essential spectrum affiliated with nilpotents 263
8.6 Notes and remarks 270
Appendix. Recent developments and applications 273
A.1 The metatheorem on similarity and approximation of operators 273
A.1.1 The closure theorem 274
A.1.2 The distance formulas 274
A.2 The approximate inverse of the Riesz decomposition theorem, and the "completion" of the functional calculus 276
A.2.1 Limits of operators with p-th roots, or logarithms 276
A.2.2 The approximate inverse of the Riesz decomposition theorem . . 278
A.2.3 Miscellaneous results 279
A.3 Nest algebras, compact perturbations, and models for operators 280
A.3.1 Nests and nest algebras 280
A.3.2 Compact perturbations of nest algebras, and models 282
A.3.3 Jacobson radical and Larson's ideal 287
A.4 Classes of operators related to inner derivations 289
A.4.1 Derivation ranges and the identity 289
A.4.2 Finite operators 291
