

TABLE OF CONTENTS

PREFACE

CHAPTER 1.	Elementary properties of hyponormal operators and semi-hyponormal operators	1
1.	Introduction and definitions	1
1.1	Introduction	1
1.2	Definition of hyponormal operators	2
1.3	Definition of semi-hyponormal operators	3
1.4	Semi-hyponormality of hyponormal operators	4
1.5	The Cayley transform	6
2.	Some elementary properties of hyponormal and semi-hyponormal operators	6
2.1	Some elementary properties	6
2.2	The joint point spectrum	9
2.3	The joint approximate point spectrum	11
2.4	Berberian's technique	15
2.5	Completely nonnormal operators	18
3.	Homotopy properties of the spectrum and the spectral cutting	19
3.1	A homotopy property of the spectrum	19
3.2	The angular cutting of the spectrum	21
3.3	The rectangular cutting of the spectrum	24
3.4	The spectral mapping for similarity transformations	25
CHAPTER 2.	Symbols	27
1.	The definition of symbols and their basic properties	27
1.1	Definition and elementary properties	27
1.2	Decomposition properties of the spectrum	31
2.	The symbols of a hyponormal operator and the polar symbols of a semi-hyponormal operator	32
2.1	Definition of Γ operators and their relations with symbols	32

2.2	Sufficient conditions for the existence of the symbols	33
2.3	Symbols of hyponormal operators	36
3.	The projection of the spectrum and the spectral radius	38
3.1	Rectangular and polar decomposition of the spectrum	38
3.2	Spectral radius	41
3.3	Spectral mapping theorem for the Cayley transformation	44
CHAPTER 3.	Singular integral models	47
1.	A class of singular integral operators	47
1.1	The space of vector-valued square-integrable functions	47
1.2	Vector-valued Fourier series	50
1.3	A class of semi-hyponormal operators	52
1.4	Singular integrals with Cuachy kernel on the real line	55
1.5	A class of hyponormal operators	56
2.	Function models of unitary operators and of operators commuting with a unitary operator	58
2.1	Function models of unitary operators	58
2.2	Function models of operators commuting with a unitary operator	61
3.	Models of operators in SHU and hyponormal operators	65
3.1	The singular integral model of an operator in SHU	65
3.2	Model of a hyponormal operator	68
4.	The function model of a semi-hyponormal operator	72
4.1	Model of unilateral shifts	72
4.2	Singular integral model	77
CHAPTER 4.	Relations between the spectra of semi-hyponormal operators and those of the general polar symbols	80
1.	Spectra of the general symbols	80
1.1	The spectrum of a normal multiplication operator	80
1.2	Union of spectra of the general symbols	82
1.3	An estimate for a class of resolvents	83

2.	Some lemmas	84
2.1	Properties of vector-valued measurable functions	84
2.2	Properties of sets with positive measure	85
2.3	A dense subset in the space of square integrable functions	86
2.4	Point spectrum $\sigma_p(T^*)$ in the case of one-dimensional \mathcal{H}	87
3.	Spectra of hyponormal operators	89
3.1	Statement of the theorem and the proof for $\sigma(T) \subset \tau(T)$	89
3.2	Proof of $\tau(T) \subset \sigma(T)$	91
4.	Spectra of semi-hyponormal operators	95
CHAPTER 5.	Mosaics and characteristic functions	98
1.	Riemann-Hilbert problems	98
1.1	Determining functions	98
1.2	The analytic function $R(\cdot, \cdot)$	100
1.3	Riemann-Hilbert problem	100
1.4	Semi-hyponormal operators case	101
2.	The Mosaics	102
2.1	Some lemmas	102
2.2	The mosaic of a hyponormal operator	105
2.3	Mosaic of a semi-hyponormal operator	108
3.	Determining sets and Putnam inequality	109
3.1	The determining set of a mosaic	109
3.2	Putnam inequality	113
3.3	Rectangular cutting of a hyponormal operator	115
4.	Characteristic functions	118
4.1	Another class of determining functions	118
4.2	Characteristic functions	119
5.	Toeplitz operator related to a semi-hyponormal operator	121
5.1	Toeplitz operators	121
5.2	Operator defined by the characteristic function	123

CHAPTER 6.	Spectral mapping	127
1.	Functional transformations of hyponormal operators	127
1.1	A class of functional transformations	127
1.2	Some class of functions	128
1.3	Functional transformation of hyponormal operators	130
2.	Spectral mapping theorems of hyponormal operators	131
2.1	Statement of the problem	131
2.2	Some lemmas	132
2.3	Spectral mapping theorems	133
3.	Spectral mapping theorems of semi-hyponormal operators	138
3.1	Some classes of functional transformations	139
3.2	Spectral mapping theorems	140
3.3	Another spectral mapping theorem	143
3.4	Angular cutting of semi-hyponormal operators	149
4.	Estimate of resolvents	152
4.1	Estimate of resolvents of operators given by functional transformations of a hyponormal operator	152
4.2	Estimate of resolvent of a semi-hyponormal operator	153
5.	Quasi-hyponormal operators	155
5.1	Generalization of the Putnam inequality	155
5.2	Class of quasi-hyponormal operators	156
5.3	Properties of quasi-hyponormal operators	158
CHAPTER 7.	Pincus principal functions, traces and determinants	160
1.	Traces	160
1.1	The definition of the trace	160
1.2	Properties of the trace	161
2.	Pincus principal functions and the trace formula	164
2.1	Hyponormal operators case	164
2.2	Semi-hyponormal operators	170
3.	The trace formula of a 'nearly normal operator	170
3.1	Collapsing bilinear functionals	170

3.2	Trace formula of a nearly normal hypo-normal operator	173
3.3	Trace formula of a nearly normal semi-hyponormal operator	174
4.	Pincus principal functions and determinants	175
4.1	Definition of a determinant and its properties	175
4.2	Determinant of a characteristic function	176
4.3	Determinant of a multiplication commutator represented by a principle function	177
APPENDIX.	Spectral analysis of contractions	179
1.	Characteristic functions	179
1.1	Definition of characteristic functions	179
1.2	Elementary properties of characteristic functions	181
1.3	Contractions with spectrum in the unit circle	184
2.	Function models	189
2.1	Completely nonunitary contractions	189
2.2	Function models of completely nonunitary contractions	192
3.	Invariant subspaces	202
3.1	Analysis of invariant subspaces	202
3.2	Decomposition of contraction analytic functions	208
3.3	Main results	213
