Editor's Introduction	ix
Introduction	349
§1 Banach couples	
1.1 Definition of a Banach couple	355
1.2 Examples of Banach couples	357
1.3 The sum and the intersection of the spaces of a couple	360
1.4 Mappings of Banach couples	361
1.5 Ideals of maps of Banach couples	364
1.6 Orbits of elements. Orbits and coorbits of spaces	368
1.7 Interpolation functors. The characteristic function of an interpolation functor	370
1.8 Examples of interpolation functors	372
§2 Duality for orbits and coorbits	375
§3 The K-functional	382
3.1 Elementary properties of the K -functional	382
3.2 The K -functional and nonlinear bounded operators	386
3.3 The functors of orbits and the K -functional	389
3.4 The computation of the K -functional in special Banach couples	390
§4 The connection between the K-functional and quasi-concave functions	396
4.1 The notion of a generating element of a function	396

4.2	The classification of weight sequences	399
§5	K-monotone couples	407
5.1	The classical K -monotone couples	407
5.2	Interpolation from the couple $L_1(\bar{w})$ into an arbitrary Banach couple	409
5.3	Interpolation from the couple $\{L_{p_0}(w_0), L_{p_1}(w_1)\}$ into $\{L_{q_0}(\sigma_0), L_{q_1}(\sigma_1)\}$	416
5.4	K -monotone couples and the Fourier transform	417
§6	Orbital equivalence	419
§7	The real methods of interpolation	421
7.1	The K -method	421
7.2	The J -method	430
7.3	The connection between K - and J -methods	432
7.4	Reiteration for the K - and J -methods	435
7.5	Duality between K - and J -methods	438
7.6	Special cases of K - and J -methods	441
7.7	A reiteration theorem connected with functions of the type P^{+-}	447
§8	The interpolation methods of Ovchinnikov and Gustavsson–Peetre	449
8.1	Definition of functors	449
8.2	The Calderón construction of an intermediate space for a couple of Banach lattices	452
8.3	Special properties of the functors G_1, G_2, G_3	464
8.4	Dual constructions	470
8.5	Computation of the spaces of the dual constructions	474

8.6	Reiteration theorems for functors G and H	482
8.7	Functors commuting with infinite direct products	485
8.8	Duality between the functors G and H	487
§9	Orbital description of the complex method	489
§10	Interpolation orbits of some special ideals	496
10.1	The orbits of coherently nuclear operators	496
10.2	The interpolation orbits of the ideal AS_*	498
10.3	Orbits of ideals connected with the couple $\{L_1, L_\infty\}$	500
§11	Hilbert couples	505
11.1	Interpolation of operators in the ideals \mathfrak{S}_p	505
11.2	Interpolation of nuclear operators connected with Hilbert couples	508
11.3	Some applications	510
11.4	The description of all Hilbert interpolation spaces for Hilbert couples	511
