Introduction	9
Preliminaries	12
A. Operators on finite dimensional linear spaces	12
A.1. Finite dimensional linear spaces	12
A.2. Operators and matrices	12
A.3. Traces	14
A.4. Determinants	14
A.5. Eigenvalues	15
B. Spaces and operators	16
B.1. Operators on quasi-Banach spaces	16
B.2. Operators on Banach spaces	18
B.3. Duality	19
B.4. Finite operators on Banach spaces	20
C. Sequence and function spaces	22
C.1. Classical sequence spaces	22
C.2. Direct sums of Banach spaces	23
C.3. Classical function spaces	23
C.4. The metric extension property	25
D. Operator ideals	25
D.1. Quasi-Banach operator ideals	25
D.2. Some examples of operator ideals	28
D.3. Extension of operator ideals	28
E. Tensor products	29
E.1. Algebraic tensor products	29
E.2. Banach tensor products	30
E.3. Tensor stability of operator ideals	30
F. Interpolation theory	31
F.1. Intermediate spaces	31
F.2. Interpolation methods	31
F.3. Real interpolation	32
F.4. Interpolation of quasi-Banach operator ideals	33
G. Inequalities	33
G.1. The inequality of means	33
G.2. The Khintchine inequality	34
G.3. Asymptotic estimates	36
Chapter 1. Absolutely summing operators	37
1.1. Summable sequences	37
1.2. Absolutely (r, s) -summing operators	41
1.3. Absolutely r -summing operators	45
1.4. Hilbert-Schmidt operators	54
1.5. Absolutely 2-summing operators	57
1.6. Diagonal operators	60
1.7. Nuclear operators	64

Chapter 2. s-Numbers	73
2.1. Lorentz sequence spaces	73
2.2. Axiomatic theory of s -numbers	79
2.3. Approximation numbers	83
2.4. Gel'fand and Weyl numbers	90
2.5. Kolmogorov and Chang numbers	95
2.6. Hilbert numbers	96
2.7. Absolutely $(r, 2)$ -summing operators	97
2.8. Generalized approximation numbers	100
2.9. Diagonal operators	107
2.10. Relationships between various s -numbers	115
2.11. Schatten-von Neumann operators	118
Chapter 3. Eigenvalues	135
3.1. The Riesz decomposition	135
3.2. Riesz operators	138
3.3. Related operators	149
3.4. The eigenvalue type of operator ideals	151
3.5. Eigenvalues of Schatten-von Neumann operators	154
3.6. Eigenvalues of s -type operators	156
3.7. Eigenvalues of absolutely summing operators	158
3.8. Eigenvalues of nuclear operators	160
3.9. The eigenvalue type of sums of operator ideals	164
Chapter 4. Traces and determinants	167
4.1. Fredholm resolvents	168
4.2. Traces	170
4.3. Determinants	185
4.4. Fredholm denominators	195
4.5. Regularized Fredholm denominators	200
4.6. The relationship between traces and determinants	206
4.7. Traces and determinants of nuclear operators	210
4.8. Entire functions	221
Chapter 5. Matrix operators	227
5.1. Examples of finite matrices	227
5.2. Examples of infinite matrices	229
5.3. Hille-Tamarkin matrices	230
5.4. Besov matrices	232
5.5. Traces and determinants of matrices	236
Chapter 6. Integral operators	242
6.1. Continuous kernels	242
6.2. Hille-Tamarkin kernels	244
6.3. Weakly singular kernels	248
6.4. Besov kernels	252

6.5.	Fourier coefficients	263
6.6.	Traces and determinants of kernels	272
Chapter 7. Historical survey		279
7.1.	Classical background	280
7.2.	Spaces	286
7.3.	Operators	289
7.4.	Eigenvalues	295
7.5.	Determinants	299
7.6.	Traces	302
7.7.	Applications	304
Appendix		312
Open problems		322
Epilogue		324
Bibliography		325
