Table of Contents

Foreword 7

Author's Preface 8

Chapter 1 – FUNDAMENTAL CONCEPTS
Operators in Hilbert Space 10
Spectral Theorem and Spectrum 12
Sesquilinear Forms 14
Courant's Variational Principle 17
Decomposition of Operators 19
Deficiency Indices 20

Chapter 2 – THE ESSENTIAL SPECTRUM
The Adjoint Operator 23
Differential Operators with Constant Coefficients:
Self-adjoint and Essentially Self-adjoint Operators 25
Invariance of the Essential Spectrum under Perturbations 34
Localization of the Essential Spectrum 40
Relatively Compact Perturbations 58
Existence of Isolated Eigenvalues 72
The Euler Differential Operator 79

Chapter 3 – DISCRETE SPECTRA
Sufficient Conditions 93
Necessary and Sufficient Conditions 99
Second-Order Differential Operators 115
The Infimum of the Spectrum of Periodic Differential Operators 120

Chapter 4 – CONTINUOUS SPECTRA
Self-adjoint Operators and Boundary Conditions 127
Non-Existence of Eigenvalues 139
The Friedrichs Extension 155

Chapter 5 – STURM-LIOUVILLE OPERATORS
Oscillation and the Spectrum 162
Non-Existence of Eigenvalues 167
Special Cases 175

Chapter 6 – OSCILLATION CRITERIA
Kneser-Type Conditions 199
Special Cases 205
Integral Conditions 208
Special Cases 219
The Sturm-Liouville Equation 220

Appendix 228
