

# CONTENTS

<b>Introduction</b>	v
1. The Functional Equation	v
2. Applications to distribution theory	vii
3. Algebraic methods	ix
4. Some general comments	xi
5. Some final remarks	xii
References	xii
<b>Chapter 1. The Weyl algebra <math>A_n(K)</math></b>	1
0. Introduction	1
1. The Weyl algebra $A_n(K)$	2
2. Filtrations	4
3. Dimensions and multiplicities	7
4. Bernstein's inequality	9
5. The Bernstein class of $A_n(K)$ -modules	12
6. De Rham cohomology and the Tor-functor on modules in $\mathcal{B}_n$	15
7. Staffords Theorem	20
8. Quotients and generators for $D(x)\langle \partial/\partial x \rangle$ -modules	24
9. Final Remarks	31
References	32
<b>Chapter 2. Homological algebra and filtered rings</b>	33
0. Introduction	33
1. Review of homological algebra	35
2. Flat modules	39
3. The weak global homological dimension	43
4. Spectral sequences	48
5. Commutative noetherian rings	62
6. Filtered noetherian rings	69
7. Regular filtered rings	72
8. Non-discrete filtrations	77
9. Sheaves of filtered rings	80
References	

<b>Chapter 3. The rings <math>\mathcal{D}(V)</math> and <math>\hat{\mathcal{D}}_n(K)</math></b>	86
0. Introduction	86
1. Global homological dimensions	88
2. Differential operators on algebraic varieties	92
3. The ring $\hat{\mathcal{D}}_n(K)$	100
4. Finiteness Theorems for holonomic $\hat{\mathcal{D}}_n(K)$ -modules	113
<i>Appendix</i>	
A.1. The Normalization Theorem for irreducible algebraic varieties in $\mathbb{C}^n$	116
A.2. The equality $d_x(\mathbf{M}) = d(\mathbf{M})$	125
References	128
<b>Chapter 4. Micro-local differential operators</b>	129
0. Introduction	129
1. The ring $\mathcal{E}_p$	135
2. $\mathcal{E}_p$ is noetherian	138
3. The norms $N_m(\cdot; U, t)$	143
4. Division with bounds	145
5. Lagrangian manifolds and canonical transformations	148
6. Contact transformations	163
7. $\mathcal{E}_p$ -modules and their filtrations	170
8. The sheaf $\mathcal{E}$	173
9. The involutiveness of $\text{supp}(\mathcal{M})$	174
10. $\text{w.gl.dim}(\mathcal{E}_p) = n$	179
11. The ring $\hat{\mathcal{E}}_p$	181
12. Systems with multiple characteristics	187
References	195
<b>Chapter 5. Differential operators with analytic coefficients</b>	195
0. Introduction	196
1. The ring $\mathcal{D}_n$	197
2. The sheaf $\mathcal{D}$	198
3. $\mathcal{D}_n$ -modules and their sheaves	201
4. The support and the strong support of $\mathcal{M}$	202
5. The imbedding $\mathcal{D} \subset \mathcal{E}$	203
6. The $\mathcal{F}$ -filtration	205
7. The case when $S_{\mathcal{M}}$ is empty	206
8. The coherence of $\pi_*(\mathcal{M})$	209
9. A proof of the functional equation	215
10. The ring $\mathcal{D}(X)$ on compact real-analytic manifolds	221
References	222

<b>Chapter 6. The rationality of the roots of <math>b</math>-functions</b>	<b>223</b>
0. Introduction	223
1. The Bernstein–Sato polynomial	224
2. The sheaf $\mathcal{D}$ and its modules on manifolds	227
3. The rationality of the roots of $b$ -functions	244
4. The Nilsson class	248
5. Completeness of rational cohomology	276
<i>Appendix</i>	
Sheaves and their cohomology	281
References	288
 <b>Chapter 7. The Bernstein class of distributions and constructions of fundamental solutions to PDE's with constant coefficients</b>	 <b>289</b>
0. Introduction	289
1. Bernstein's fundamental solution	290
2. The Bernstein class $\mathcal{B}'(\mathbb{R}^n)$	293
3. More examples of distributions in $\mathcal{B}'(\mathbb{R}^n)$	296
4. The operational calculus in $\mathcal{B}'(\mathbb{R}^n)$	297
5. The analytic wave front sets of distributions	303
6. Fundamental solutions of differential operators of real principal type	318
7. Analytic continuations of distributions in $\mathcal{B}'(\mathbb{R}^n)$	328
References	332
 <b>Chapter 8. The representations of solutions to PDE's with constant coefficients by absolutely convergent integrals over exponential solutions</b>	 <b>334</b>
0. Introduction	334
1. The integral representation	337
2. Proof of Theorem 1.3	341
3. The local extension theorem for primary modules	343
4. Noetherian operators attached to primary modules	350
5. The existence of noetherian operators	352
6. Proof of Theorem 3.17	361
7. The case when $\dim(V_{\mathcal{A}}) = 0$	365
8. The simply characteristic case	366
References	369
