

Contents of Volume 2

Fourier Integral Operators

Contents of Volume 1	xiii
Chapter VI. Naive Theory of Fourier Integral Operators	301
1. Parametrices in the Cauchy Problem for Hyperbolic Equations	302
2. Local Definition of Standard Fourier Integral Operators	315
3. An Asymptotic Expansion Formula for Pseudodifferential Operators ...	323
4. Composition of Fourier Integral Operators with Pseudodifferential Operators. Effect of Fourier Integral Operators on Wave-Front Sets ...	332
5. Application to Microlocal Cauchy Problems	337
Chapter VII. Background on Differential and Symplectic Geometry	347
1. Rudiments of Symplectic Linear Algebra	348
2. Basic Differential Geometry	360
2.1. Differential Forms	360
2.2. Flow of Vector Fields	365
2.3. The Frobenius Theorem	369
2.4. Tubular Neighborhoods and Poincaré's Lemma	371
2.5. Distribution Densities on a Manifold	374
3. Basic Symplectic Differential Geometry	377
4. The Lagrangian Grassmannian	392
5. The Maslov Index and the Keller–Maslov Line Bundle	400
Chapter VIII. Fourier Distributions and Global Fourier Integral Operators. ..	413
1. Phase Functions Locally Associated with Conic Lagrangian Submanifolds of the Cotangent Bundle	414
2. The Stationary Phase Formula	428
3. Fourier Distributions Associated with a Lagrangian Submanifold of the Cotangent Bundle	433
4. The Principal Symbol of a Fourier Distribution	439
5. Global Fourier Integral Operators. Their Action on Fourier Distributions. Composition	455

6. Fourier Integral Operators Associated with a Local Canonical Graph. Symbols, Composition, Continuity, Similarities	461
6.1. Composition with Pseudodifferential Operators	465
6.2. Continuity in Sobolev Spaces	466
6.3. Similarities. Egorov's Theorem	466
7. Pseudodifferential Operators of Principal Type with Real Principal Symbol	468
8. The Unitary Group Generated by a First-Order Self-Adjoint Pseudodifferential Operator	472
Chapter IX. Standard Microlocal Forms of Pseudodifferential Operators ..	477
1. A Preparation Theorem for Classical Pseudodifferential Operators	478
2. Complexes of Pseudodifferential Operators. Frobenius Ideals of Principal Type with Real Principal Symbol	483
3. Preparation Theorem for Frobenius Ideals with Simple Real Characteristics	490
4. The Levi Matrix. Frobenius Ideals with Nonsingular Levi Matrix	493
5. An Example: The Induced Cauchy–Riemann Complex	505
Chapter X. Fourier Integral Operators with Complex Phase	515
1. Approximate Solutions of Certain Initial Value Problems	517
2. Flatness. Almost-Analytic Extensions	528
3. The Stationary Complex Phase Formula	534
4. Asymptotic Expansion Formula for Pseudodifferential Operators	543
5. Complex Phases and Positive Almost-Lagrangian Manifolds	546
6. Fourier Distributions Associated with Complex Phases	556
7. Fourier Integral Operators with Complex Phase. Composition	566
Chapter XI. Applications of Fourier Integral Operators with Complex Phase ..	571
1. Complex Eikonal and Transport Equations	572
2. Exponential of Certain First-Order Pseudodifferential Operators	581
3. Parametrix Construction for Certain Pseudodifferential Operators	589
4. A Class of Pseudodifferential Operators Whose Characteristic Manifold Is Symplectic	596
5. Subellipticity and Uniqueness in the Cauchy Problem	605
Chapter XII. Applications to Riemannian Manifolds	611
1. Basic Facts about the Laplace–Beltrami Operator	612
2. Growth at Infinity of the Number of Eigenvalues	619
3. Closed Geodesics and Poisson Formula	626
4. Sequences of Eigenvalues and Maslov's Quantization Condition	633
