Preface ix

Acknowledgment x

Chapter 1 **Theory of distributions** 1

1. Introduction to Chapter 1 1
2. Convolution of L^p functions 4
3. Regularization 6
4. Complex Borel measures 8
5. Partitions of unity 12
6. Integration by parts 13
7. Distributions 15
8. Restriction and support 21
9. Differentiation of distributions 23
10. Fundamental solutions of the Laplacian 25
11. The Newtonian potential in \mathbb{R}^n 28
12. Leibniz' formula. Classical derivatives 30
13. Distributions with point support 31
14. Weak derivatives and integration by parts 37
15. Distribution valued holomorphic functions 38
16. Boundary values of holomorphic functions 43
17. Operations on distributions 46
18. Convolution of distributions 47
19. Oscillatory integrals 58

Chapter 2 The Fourier transform 65

1. Introduction to Chapter 2 65
2. Fourier transform. L^1 theory 67
3. L^1 inversion theory 71
4. Fourier transform. L^2 theory 78
5. Temperate distributions and \mathcal{O}_M 82
6. Convolution of temperate distributions. The space \mathcal{O}'_C 87
7. The Fourier transform on \mathcal{S}' . The exchange formulae 91
8. The Fourier transform on \mathcal{E}' . The Paley–Wiener theorem 95
9. Operators defined by the Fourier transform 106
10. Homogeneous distributions 119
11. Periodic distributions and Fourier series 122
12. Laplace transform 128
13. The wave front set of a distribution 145

Chapter 3 Pseudo-differential operators 161

1. Introduction to Chapter 3 161
2. Pseudo-differential operators 166
3. Smoothing operators and properly supported operators 178
4. Operators of the form $a'(X, -iD, X)$ 185
5. Transpose and composition 192
6. Classical pseudo-differential operators 198
7. Invariance of pseudo-differential operators 204
8. The pseudo-local property 208
9. Characteristics. The regularity theorem 212

Chapter 4 Hilbert space methods 225

1. Introduction to Chapter 4 225
2. Sobolev spaces 228

-
3. Operators on Sobolev spaces 237
 4. L^2 continuity of pseudo-differential operators 247
 5. Local Sobolev spaces 255
 6. The H^s wave front set 259
 7. Subellipticity and local existence 265
 8. Appendix. The Seidenberg–Tarski theorem 293

Chapter 5 **Gårding's inequality** 305

1. Introduction to Chapter 5 305
2. The spaces $H^m(\Omega)$ 306
3. The Dirichlet problem 313
4. Discussion of Gårding's inequality 322
5. Generalized Dirichlet forms 325
6. The Friedrichs' symmetrization 329
7. Propagation of singularities 335

Bibliography 346
