

Table of Contents

Yitzhak Pilpel and Orna Man Control of Translation: Comparative Genomics and Mechanistic Aspects	1
Matthias Erwin Futschik, Hanspeter Herzl Are we Overestimating the Number of Cell-Cycling Genes? The Impact of Background Models	2
Knut Reinert, Markus Bauer, Andreas Döring, Gunnar Klau, Aaron Halpern A General Paradigm for Fast, Adaptive Clustering of Biological Sequences	15
Torsten Blum, Oliver Kohlbacher Finding Relevant Biotransformation Routes in Weighted Metabolic Networks	30
Holger Fröhlich, Mark Fellmann, Holger Sülthmann, Annemarie Poustka, Tim Reißbarth Estimating Large Scale Signaling Networks through Nested Effects Models from Intervention Effects in Microarray Data	45
Nikolaus Rajewsky Identifying MicroRNAs and their Targets	55
Hakim Tafer RNAplex a Fast and Flexible RNA-RNA Interaction Search Tool	56
Axel Mosig, Peter Menzel, Peter F. Stadler Tanimoto's Best Barbecue: Discovering Regulatory Modules using Tanimoto Scores	68
Natalja Kurbatova, Laura Mancinska, Juris Viksna Protein Structure Comparison Based on Fold Evolution	78
Frank Dressel, Annalisa Marsico, Anne Tuukkanen, Michael Schroeder and Dirk Labudde Understanding of SMFS Barriers by Means of Energy Profiles	90
Pavel Pevzner The Third Rebuttal of the Random Breakage Theory	100
Lin Himmelmann, Dirk Metzler A Study on the Empirical Support for Prior Distributions on Phylogenetic Tree Topologies	101

Kerstin Kunz, Volkhard Helms QVADIS – a Package to Compute Proton Transfer Pathways in Proteins	111
Jan Grau, Jens Keilwagen, Alexander Kel, Ivo Grosse, Stefan Posch Supervised Posteriors for DNA -motif Classification	123
Niklas Eriksen Expected Gene Order Distances and Model Selection in Bacteria	135
Wolfgang Stephan Inferring Genomic Footprints of Adaptation from SNP Data	145
Samira Jaeger, Ulf Leser High-Precision Function Prediction using Conserved Interactions	146
Christian Rödelsperger, Christoph Dieterich Two Graph-based Approaches for Finding Cross-species Conserved Gene Orders	163
Sebastian Klie, Lennart Martens, Juan Antonio Vizcaino, Richard Cote, Phil Jones, Rolf Apweiler, Alexander Hinneburg, Henning Hermjakob An Application of Latent Topic Document Analysis to Large-Scale Proteomics Databases	174
Alexey Antonov, Hans W. Mewes Revealing Comprehensive Genotype–Phenotype Associations through Logic Relationships	185
Lothar Willmitzer, Camila Caldana, Alisdair Fernie, Patrick Giavalisco, Matthew Hannah, Hennig Redestig, Dirk Steinhauser Integrative Analysis of Transcriptome and Metabolome Data	198
