Preface	ix
1 Introduction	1
I Global methods	
2 The Hamilton-Jacobi theory	
2.1 Introduction	9
2.2 Global sufficient conditions	10
2.3 Problems	18
3 The LQ problem	
3.1 Introduction	21
3.2 Finite control horizon	22
3.3 Infinite control horizon	39
3.4 The optimal regulator	44
3.4.1 Stability properties	59
3.4.2 Robustness properties	71
3.4.3 The cheap control	76
3.4.4 The inverse problem	82
3.5 Problems	89
4 The LQG problem	
4.1 Introduction	91
4.2 The Kalman filter	93
4.2.1 The normal case	93
4.2.2 The singular case	104
4.3 The LQG control problem	112
4.3.1 Finite control horizon	112
4.3.2 Infinite control horizon	115
4.4 Problems	122
5 The Riccati equations	
5.1 Introduction	125

5.2	The differential equation	125
5.3	The algebraic equation	127
5.4	Problems	143
II Variational methods		
6 The Maximum Principle		
6.1	Introduction	147
6.2	Simple constraints	149
6.2.1	Integral performance index	151
6.2.2	Performance index function of the final event	164
6.3	Complex constraints	180
6.3.1	Nonregular final varieties	181
6.3.2	Integral constraints	184
6.3.3	Global instantaneous equality constraints	187
6.3.4	Isolated equality constraints	190
6.3.5	Global instantaneous inequality constraints	196
6.4	Singular arcs	200
6.5	Time optimal control	205
6.6	Problems	216
7 Second variation methods		
7.1	Introduction	221
7.2	Local sufficient conditions	222
7.3	Neighbouring optimal control	235
7.4	Problems	246
A Basic background		
A.1	Canonical decomposition	249
A.2	Transition matrix	252
A.3	Poles and zeros	253
A.4	Quadratic forms	254
A.5	Expected value and covariance	255
B Eigenvalues assignment		
B.1	Introduction	259
B.2	Assignment with accessible state	260
B.3	Assignment with inaccessible state	267
B.4	Assignment with asymptotic errors zeroing	272
C Notation		
Bibliography		283
List of Algorithms, Assumptions, Corollaries,		287
Index		291
