Preface vii

- 1 Fundamental material 1
 - Introduction 1
 - Differential equations 2
 - Laplace transforms 6
 - Convolution integral 13
 - Transfer functions 15
 - Problems 17

- 2 Linear system modelling 22
 - Introduction 22
 - System inputs 23
 - Electrical systems 24
 - Mechanical systems 29
 - Electromechanical systems 37
 - Hydraulic systems 39
 - Process systems 40
 - Problems 49

- 3 System representation by diagrams 53
 - Benefits 53
 - Signal flow graphs 53
 - Block diagrams 58
 - Problems 65

- 4 Systems with simple feedback 70
 - Feedback 70
 - Problems 78

- 5 System poles, zeros and stability 81
 - Rational transfer function 81
 - System poles 81
 - Stability 82
 - System zeros 86
 - Problems 89

- 6 Frequency response 93
 - Frequency transfer function 93
 - Phasor diagrams 94
 - Polar plots 101
 - Inverse polar plots 107
 - Logarithmic plots 113
 - Problems 122

- 7 Additional controller terms 128
 - Integral action 128
 - Derivative action 130
 - PID control 132
 - Velocity feedback 136
 - Feedforward terms 141
 - Cascade control 146
 - Problems 149

- 8 Stability and the time domain 154
 - Stability of closed loop systems 154
 - Routh–Hurwitz criterion 154
 - Root locus 156
 - Problems 169

- 9 Stability and the frequency domain 173
 - The Nyquist criterion 173
 - Relative stability 181
 - Stability and the inverse Nyquist plot 184
 - Stability and the Bode plot 188
 - Closed loop frequency response 192
 - M and N circles and the Nichols chart 194
 - Nichols chart 196
 - Problems 199

- 10 Phase compensators and other controllers 204
 - Phase compensators 204
 - Feedforward control 222
 - Cascade control 222
 - Loop interaction 222
 - Problems 226

Index 231
