CONTENTS

1. Weighted L_p - spaces of entire analytic functions 8
1.1. Introduction 8
1.2. Ultra - distributions 11
1.2.1. Definitions 11
1.2.2. Basic properties 14
1.2.3. The Paley - Wiener - Schwartz theorem for ultra - distributions 17
1.3. Inequalities of Plancherel - Polya - Nikol'skij type for S_ω - functions 19
1.3.1. Definition 19
1.3.2. A maximal inequality 21
1.3.3. Inequalities of Plancherel - Polya - Nikol'skij type for the Lebesgue measure 24
1.3.4. Inequalities of Plancherel - Polya - Nikol'skij type for Borel measures 26
1.3.5. Representation formula and non - inequalities 30
1.4. L_p - spaces of entire analytic functions 36
1.4.1. Definitions 36
1.4.2. Inequalities 36
1.4.3. Basic properties 38
1.4.4. Density 39
1.4.5. Duality 41
1.4.6. Representation formula, isomorphic properties, and Schauder bases 46
1.5. Fourier multipliers for L_p - spaces of entire analytic functions 50
1.5.1. Introduction and definition 50
1.5.2. The main multiplier theorem 52
1.5.3. Convolution algebras 56
1.5.4. Some informations on Sobolev - Besov spaces 57
1.5.5. Special multiplier theorem 60
1.5.6. A second method 63
1.5.7. Non - multipliers 64

2. General function spaces of Besov - Hardy - Sobolev type on $\mathbb{R}_n$ 68
2.1. Introduction 68
2.2. Definitions and preliminaries 70
2.2.1. Regular coverings in $\mathbb{R}_n$ 70
2.2.2. Classes of type $\mathcal{A}$ 71
2.2.3. Spaces of type Z 73
2.2.4. The spaces $\mathcal{B}^{s(x)}_{p,q}$ and $F^{s(x)}_{p,q}$ 74
2.3. Fundamental properties of the spaces $\mathcal{B}^{s(x)}_{p,q}$ and $F^{s(x)}_{p,q}$ 77
2.3.1. The maximal functions $\varphi_k^* f$ 77
2.3.2. A maximal inequality 82
2.3.3. Further properties 87
2.3.4. The spaces $\mathcal{B}^{s(x)}_{p,q}$ 92
2.4. Fourier multipliers for $\mathcal{B}^{s(x)}_{p,q}$ and $F^{s(x)}_{p,q}$ 94
2.4.1. Definition 94
2.4.2. Multiplier theorem 95
2.4.3. Multipliers for $\mathcal{B}^{s(x)}_{p,q}$ 97
2.5. Special spaces 98
2.5.1. Isotropic spaces 98
2.5.2. Anisotropic spaces 104
2.5.3. "Dyadic" spaces and spaces with dominating mixed derivatives 107
2.5.4. A non - standard covering; final remarks 111

3. Abstract spaces of Besov - Sobolev type; applications 115
3.1. Introduction 115
3.2. Abstract spaces of Besov type 116
3.2.1. Multipliers for Banach spaces 116
3.2.2. Abstract Besov spaces 118
3.3. The spaces $\mathcal{D}(\Lambda^\alpha)$; interpolation theory 123
3.3.1. The operators Λ^α 123
3.3.2. Interpolation theory 126
3.3.3. Multipliers 129

3.4. Fourier series 132
3.4.1. Cesàro means 132
3.4.2. Lacunary series 134
3.4.3. Fourier coefficients 138
3.5. Applications 143
3.5.1. Weighted L_p - spaces 143
3.5.2. Besov - Lebesgue - Sobolev spaces on R_n 145
3.5.3. Weighted spaces of Besov - Sobolev type 147
3.5.4. Besov - Sobolev spaces on T_n ; multiple trigonometrical series 149
3.5.5. Classical orthogonal expansions 153
