

# Contents

<i>Chapter 1 Some topological preliminaries</i> .....	1
Summary .....	1
1.1 Locally convex spaces .....	2
1.2 Vector valued infinite sums and integrals .....	6
1.3 Baire spaces .....	9
1.4 Barrelled spaces .....	11
1.5 Inductive limits .....	13
<i>Chapter 2 Gâteaux-analyticity</i> .....	19
Summary .....	19
2.1 Vector valued functions of several complex variables .....	20
2.2 Polynomials and polynomial maps .....	28
2.3 Gâteaux-analyticity .....	35
2.4 Boundedness and continuity of Gâteaux-analytic maps .....	43
Exercises .....	50
<i>Chapter 3 Analyticity, or Fréchet-analyticity</i> .....	51
Summary .....	51
3.1 Equivalent definitions .....	52
3.2 Separate analyticity .....	58
3.3 Entire maps and functions .....	65
3.4 Bounding sets .....	73
Exercises .....	79
<i>Chapter 4 Plurisubharmonic functions</i> .....	81
Summary .....	81
4.1 Plurisubharmonic functions on an open set $\Omega$ in a l.c. space $X$ .....	82
4.2 The finite dimensional case .....	87
4.3 Back to the infinite dimensional case .....	94
4.4 Analytic maps and pluriharmonic functions .....	104

## VIII Contents

4.5 Polar subsets .....	107
4.6 A fine maximum principle .....	120
Exercises .....	127
<i>Chapter 5 Problems involving plurisubharmonic functions</i> .....	129
Summary .....	129
5.1 Pseudoconvexity in a l.c. space $X$ .....	130
5.2 The Levi problem .....	135
5.3 Boundedness of p.s.h. functions and entire maps .....	144
5.4 The growth of p.s.h. functions and entire maps .....	146
5.5 The density number for a p.s.h. function .....	154
Exercises .....	162
<i>Chapter 6 Analytic maps from a given domain to another one</i> .....	163
Summary .....	163
6.1 A generalization of the Lindelöf principle .....	164
6.2 Intrinsic pseudodistances .....	168
6.3 Complex geodesics and complex extremal points .....	179
6.4 Automorphisms and fixed points .....	184
Exercises .....	194
Bibliography .....	195
Glossary of Notations .....	201
Subject Index .....	205
