

CONTENTS

Preface.

CHAPTER I. A Duality in Integral Geometry.	1
§1. Generalities.	4
1. Notation and Preliminaries	4
2. Principal Problems	6
§2. The Radon Transform for Points and Hyperplanes.	9
1. The Principal Results	9
2. The Kernel of the Dual Transform	15
3. The Radon Transform and its Dual on the K -types	20
4. Inversion of the Dual Transform	23
5. The Range Characterization for Distributions and Consequences	28
6. Some Facts about Topological Vector Spaces	32
§3. Homogeneous Spaces in Duality.	34
1. The Radon Transform for a Double Fibration	34
2. The Radon Transform for Grassmannians	43
3. The Totally Geodesic Radon Transform on Constant Curvature Spaces	50
A. The Generalized Transforms	50
B. The Inversion Formulas	51
C. Support Theorems	56
4. The d -Plane Transform	59
5. Analogy with the Poisson Integral	64
Exercises and Further Results.	66
Notes.	72

CHAPTER II. A Duality for Symmetric Spaces.	75
§1. The Space of Horocycles.	76
1. Definition and Coset Representation	76
2. The Isotropy Actions for X and Ξ	78
3. Geodesics in the Horocycle Space	82
§2. Invariant Differential Operators.	87
1. The Isomorphisms	87
2. Radial Part Interpretation	91
3. Joint Eigenspaces and Eigenspace Representations	93
4. The Mean Value Operators	94
§3. The Radon Transform and its Dual.	100
1. Measure-theoretic Preliminaries	100
2. Integral Transforms and Differential Operators	103
3. The Inversion Formula and the Plancherel Formula for the Radon Transform	108
4. The Poisson Transform	118
5. The Dual Transform and the Poisson Kernel	121
§4. Finite-dimensional Spherical and Conical Representations.	124
1. Conical Distributions. Elementary Properties	124
2. Conical Functions and Finite-dimensional Representations	132
3. The Finite-dimensional Spherical Representations	139
4. Conical Models and Spherical Models	141
5. Simultaneous Euclidean Imbeddings of X and of Ξ . Horocycles as plane sections	143
6. Restricted Weights	148
7. The Component $H(\bar{n})$	151
§5. Conical Distributions.	154
1. The Construction of $\Psi'_{\lambda,s}$	154
2. The Reduction to Rank One	158
3. The Analytic Continuation of $\Psi_{\lambda,s}$	162
4. The Determination of the Conical Distributions	173
§6. Some Rank-One Results.	179
1. Component Computations	179
2. The Inversion of \bar{N}	182
3. The Simplicity Criterion	188
4. The Algebra $\mathbf{D}(K/M)$	191

5. An Additional Conical Distribution for $\lambda = 0$	192
6. Conical Distributions for the Exceptional λ	195
Exercises and Further Results.	205
Notes.	218
CHAPTER III. The Fourier Transform on a Symmetric Space.	221
§1. The Inversion and the Plancherel Formula.	222
1. The Symmetry of the Spherical Function	222
2. The Plancherel Formula	227
§2. Generalized Spherical Functions (Eisenstein Integrals).	233
1. Reduction to Zonal Spherical Functions	233
2. The Expansion of $\Phi_{\lambda, \delta}$	240
3. Simplicity (preliminary results)	248
§3. The Q^δ-matrices.	250
1. The K -finite functions in $\mathcal{E}_\lambda(\Xi)$	250
2. Connections with Harmonic Polynomials	252
3. A Product Formula for $\det(Q^\delta(\lambda))$ (preliminary version)	256
§4. The Simplicity Criterion.	263
§5. The Paley-Wiener Theorem for the Fourier Transform on $X = G/K$.	269
1. Estimates of the Γ -coefficients	270
2. Some Identities for C_s	273
3. The Fourier Transform and the Radon Transform. K -types	275
4. Completion of the Proof of the Paley-Wiener Theorem. The Range $\mathcal{E}'(X)^\sim$	278
5. A Topological Paley-Wiener Theorem for the K -types	283
6. The Inversion—and the Plancherel Formula for the δ -spherical Transform	290
§6. Eigenfunctions and Eigenspace Representations.	293
1. The K -finite Eigenfunctions of $D(X)$	294
2. The Irreducibility Criterion for the Eigenspace Repre- sentations on G/K	295
§7. Tangent Space Analysis.	297
1. Discussion	297
2. The J -polynomials	298

3. Generalized Bessel Functions and Zonal Spherical Functions	304
4. The Fourier Transform of K -finite Functions	306
5. The Range $\mathcal{D}(\mathfrak{p})^\sim$ inside $\mathcal{H}(\mathfrak{a}^* \times K/M)$	312
§8. Eigenfunctions and Eigenspace Representations on X_o.	314
1. Simplicity	314
2. The K -finite Joint Eigenfunctions of $\mathbf{D}(G_o/K)$	317
3. The Irreducibility Criterion for the Eigenspace Representations of G_o/K	324
§9. The Compact Case.	325
1. Motivation	325
2. Compact Symmetric Spaces	327
3. Analogies	331
4. The Product Decomposition	332
§10. Elements of $\mathbf{D}(G/K)$ as Fractions.	338
§11. The Rank One Case.	343
1. An Explicit Formula for the Eisenstein Integral	343
2. Harmonic Analysis of K -finite Functions	349
§12. The Spherical Transform Revisited.	352
1. Positive Definite Functions	352
2. The Spherical Transform for Gelfand Pairs	357
3. The Case of a Symmetric Space G/K	364
Exercises and Further Results.	370
Notes.	376
CHAPTER IV. The Radon Transform on X and on X_o.	
Range Questions.	381
§1. The Support Theorem.	381
§2. The Ranges $\mathcal{D}(X)^\wedge$ and $\mathcal{E}'(X)^\wedge$ and $\mathcal{E}(\Xi)^\vee$.	384
§3. The Range and Kernel for K-types.	388
1. The General Case	388
2. Examples: \mathbf{H}^2 and \mathbf{R}^2	393
§4. The Radon Transform and its Dual for K-invariants.	396
§5. The Radon Transform on X_o.	399
1. Preliminaries	399

2. The Support Theorem	405
3. The Range and the Kernel for the K -types	407
4. The Ranges $\mathcal{E}'(X_o)^\wedge$ and $\mathcal{E}(\Xi_o)^\vee$	408
Exercises and Further Results.	411
Notes.	412
CHAPTER V. Differential Equations on Symmetric Spaces.	413
§1. Solvability.	413
1. Fundamental Solution of D	414
2. Solvability in $\mathcal{E}(X)$	415
3. Solvability in $\mathcal{E}'(X)$	419
§2. Mean Value Theorems.	420
1. The Mean Value Operators	420
2. Approximations by Analytic Functions	423
3. Ásgeirsson's Mean Value Theorem extended to Homogeneous Spaces.	425
§3. Harmonic Functions on Symmetric Spaces.	429
1. Generalities	429
2. Bounded Harmonic Functions	429
3. The Poisson Integral Formula for X	434
4. The Fatou Theorem	439
5. The Furstenberg Compactification	449
§4. Harmonic Functions on Bounded Symmetric Domains.	452
1. The Bounded Realization of a Hermitian Symmetric Space	452
2. The Geodesics in a Bounded Symmetric Domain	454
3. The Restricted Root Systems for Bounded Symmetric Domains	455
4. The Action of G_o on D and the Polydisk in D	462
5. The Shilov Boundary of a Bounded Symmetric Domain	464
6. The Dirichlet Problem for the Shilov Boundary	471
7. The Hua Equations	472
8. Integral Geometry Interpretation	478
§5. The Wave Equation on Symmetric Spaces.	480
1. Introduction. Huygens' Principle	480
2. Huygens' Principle for Compact Groups and Symmetric Spaces $X = G/K$ (G complex)	483
3. Huygens' Principle and Cartan Subgroups	489
4. Orbital Integrals and Huygens' Principle	494
5. Energy Equipartition	498

§6. Eigenfunctions and Hyperfunctions.	503
1. Arbitrary Eigenfunctions	503
2. Exponentially Bounded Eigenfunctions	508
Exercises and Further Results.	509
Notes.	514
CHAPTER VI. Eigenspace Representations.	517
§1. Generalities.	517
1. A Motivating Example	517
2. Eigenspace Representations on Function- and Distribution-Spaces	518
3. Eigenspace Representations for Vector Bundles	519
§2. Irreducibility Criteria for a Symmetric Space.	521
1. The Compact Case	521
2. The Euclidean Type	524
3. The Noncompact Type	524
§3. Eigenspace Representations for the Horocycle Space G/MN.	526
1. The Principal Series	526
2. The Spherical Principal Series. Irreducibility	527
3. Conical Distributions and the Construction of the Intertwining Operators	533
4. Convolution on G/MN	536
§4. Eigenspace Representations for the Complex Space G/N.	541
1. The Algebra $D(G/N)$	541
2. The Principal Series	544
3. The Finite-Dimensional Holomorphic Representations	544
§5. Two Models of the Spherical Representations.	546
Exercises and Further Results.	549
Notes.	552
SOLUTIONS TO EXERCISES.	553
BIBLIOGRAPHY.	581
SYMBOLS FREQUENTLY USED.	603
INDEX.	607
