<i>Preface</i>	ix
1 Preliminaries	1
1.1. Kernels	1
1.2. Markov chains	3
2 Irreducible kernels	8
2.1. Closed sets	8
2.2. φ -irreducibility	11
2.3. The small functions	14
2.4. Cyclicity	20
3 Transience and recurrence	25
3.1. Some potential theory	25
3.2. R -transience and R -recurrence	27
3.3. Stopping times for Markov chains	31
3.4. Hitting and exit times	33
3.5. The dissipative and conservative parts	38
3.6. Recurrence	41
4 Embedded renewal processes	47
4.1. Renewal sequences and renewal processes	47
4.2. Kernels and Markov chains having a proper atom	51
4.3. The general regeneration scheme	58
4.4. The split chain	60
5 Positive and null recurrence	68
5.1. Subinvariant and invariant functions	69
5.2. Subinvariant and invariant measures	72
5.3. Expectations over blocks	75
5.4. Recurrence of degree 2	84
5.5. Geometric recurrence	86
5.6. Uniform recurrence	91
5.7. Degrees of R -recurrence	94
6 Total variation limit theorems	98
6.1. Renewal theory	98
6.2. Convergence of the iterates $K^n(x, A)$	108

6.3. Ergodic Markov chains	114
6.4. Ergodicity of degree 2	118
6.5. Geometric ergodicity	119
6.6. Uniform ergodicity	122
6.7. R -ergodic kernels	123
7 Miscellaneous limit theorems for Harris recurrent Markov chains	126
7.1. Sums of transition probabilities	126
7.2. Ratios of sums of transition probabilities	129
7.3. Ratios of transition probabilities	131
7.4. A central limit theorem	134
<i>Notes and comments</i>	141
<i>List of symbols and notation</i>	147
<i>Bibliography</i>	148
<i>Index</i>	155
