Contents

PREFACE

1. DESCRIPTION OF THE PROBLEM

1.1 INTRODUCTION 1

1.2 REVIEW OF THE LITERATURE 5

1.3 SUMMARY 7

2. THE MATHEMATICAL MODEL

2.1 THE MODEL 9

2.2 NOTATIONS AND PRELIMINARIES 18

3. BUSY PERIOD CHARACTERISTICS

3.1 THE FUNDAMENTAL AND BUSY PERIODS 24

3.2 THE BUSY CYCLE AND OTHER FIRST PASSAGE TIMES 34

3.3 THE CASE OF RANDOM ERRORS 42

4. STATIONARY QUEUE LENGTH DISTRIBUTIONS

4.1 THE STATIONARY QUEUE LENGTH DISTRIBUTION AT BLOCK TRANSMISSIONS 45

4.2 THE STATIONARY QUEUE LENGTH DISTRIBUTION IN CONTINUOUS TIME 50

4.3 THE CASE OF RANDOM ERRORS 63

5. MOMENTS OF THE QUEUE LENGTH DISTRIBUTIONS

5.1 DERIVATIVES OF THE PERRON-FROBENIUS EIGENVALUE 66

5.2 MOMENTS OF THE QUEUE LENGTH 68

5.3 THE CASE OF RANDOM ERRORS 75

6. HIGHER MOMENTS OF THE BUSY PERIOD CHARACTERISTICS

6.1 INTRODUCTION 78

6.2 THE SECOND MOMENTS OF THE FUNDAMENTAL PERIOD 78

6.3 THE CROSS MOMENTS OF THE FUNDAMENTAL PERIOD 84

6.4 THE SECOND AND CROSS MOMENTS FOR THE ORDINARY BUSY PERIOD 89

6.5 THE CASE OF RANDOM ERRORS 91

7. SELECTION OF BLOCK SIZE

7.1 INTRODUCTION 93

7.2 THE WASTED TIME DUE TO THE BLOCKS 94

7.3 THE PHASE AT BLOCK TRANSMISSIONS 96

7.4 THE WASTED TIME DURING A BLOCK TRANSMISSION 100

7.5 THE WASTED TIME DURING A BUSY PERIOD 101

7.6 THE WASTED TIME DURING A MESSAGE TRANSMISSION 103

7.7 THE CASE OF RANDOM ERRORS 112

8. IMPLEMENTATION OF THE ALGORITHM

8.1 NUMERICAL PROCEDURES 114

8.2 THE GENERAL ALGORITHM 132

9. VARIATIONS OF THE MODEL

9.1 ERRORS IN THE ACKNOWLEDGEMENTS 135

9.2 A THRESHOLD FOR THE NOISE ON A CHANNEL 136

10. NUMERICAL EXAMPLES

10.1 NUMERICAL EXAMPLES 138
