<b>Fact File Directory</b>	<b>xi</b>
<b>Preface to the Second Edition</b>	<b>xv</b>
<b>Preface to the Third Edition</b>	<b>xvii</b>
<b>Preface to the Fourth Edition</b>	<b>xix</b>
<b>Preface to the Fifth Edition</b>	<b>xxi</b>
<b>Chapter 1 What is sound?</b>	<b>1</b>
A vibrating source	1
Characteristics of a sound wave	1
How sound travels in air	3
Simple and complex sounds	4
Frequency spectra of repetitive sounds	5
Frequency spectra of non-repetitive sounds	7
Phase	8
Sound in electrical form	11
Displaying the characteristics of a sound wave	13
The decibel	14
Sound power and sound pressure	16
Free and reverberant fields	18
Standing waves	21
Recommended further reading	24
<b>Chapter 2 Auditory perception</b>	<b>25</b>
The hearing mechanism	25
Frequency perception	26
Loudness perception	28
Practical implications of equal-loudness contours	30
Spatial perception	32
Recommended further reading	40

<b>Chapter 3 Microphones</b>	<b>41</b>
The moving-coil or dynamic microphone	41
The ribbon microphone	42
The capacitor or condenser microphone	45
Directional responses and polar diagrams	46
Specialised microphone types	54
Switchable polar patterns	56
Stereo microphones	57
Microphone performance	59
Microphone powering options	62
Radio microphones	65
Recommended further reading	73
<b>Chapter 4 Loudspeakers</b>	<b>74</b>
The moving-coil loudspeaker	74
Other loudspeaker types	76
Mounting and loading drive units	79
Complete loudspeaker systems	82
Active loudspeakers	85
Subwoofers	86
Loudspeaker performance	87
Setting up loudspeakers	93
Recommended further reading	95
<b>Chapter 5 Mixers</b>	<b>96</b>
A simple six-channel mixer	96
A multitrack mixer	102
Channel grouping	106
An overview of typical mixer facilities	107
Digital mixers	120
EQ explained	121
Stereo line input modules	127
Dedicated monitor mixer	127
Introduction to mixing approaches	128
Basic operational techniques	129
Technical specifications	131
Metering systems	135
Automation	140
Recommended further reading	153

<b>Chapter 6 Analogue recording</b>	<b>154</b>
A short history of analogue recording	154
Magnetic tape	156
The magnetic recording process	159
The tape recorder	164
Track formats	169
Magnetic recording levels	170
What are test tapes for?	171
Tape machine alignment	172
Mechanical transport functions	176
The Compact Cassette	178
Recommended further reading	181
<b>Chapter 7 Noise reduction</b>	<b>182</b>
Why is noise reduction required?	182
Methods of reducing noise	182
Line-up of noise reduction systems	188
Operational considerations	190
Single-ended noise reduction	190
Recommended further reading	192
<b>Chapter 8 Digital audio principles</b>	<b>193</b>
Digital and analogue recording contrasted	193
Binary for beginners	195
The digital audio signal chain	199
Analogue to digital conversion	200
D/A conversion	221
Direct Stream Digital (DSD)	222
Changing the resolution of an audio signal (requantisation)	224
Introduction to digital signal processing	227
Audio data reduction	235
Recommended further reading	242
<b>Chapter 9 Digital recording and editing systems</b>	<b>243</b>
Digital tape recording	243
Disk-based systems	254
Sound file formats	264
Consumer digital formats	271
Solid state recording formats	276
Audio processing for computer workstations	276
Disk-based editing system principles	278
Recommended further reading	286

<b>Chapter 10 Digital audio applications</b>	<b>287</b>
Editing software	287
Plug-in architectures	290
Advanced audio processing software and development tools	292
Mastering and restoration	294
Preparing for and understanding release media	300
Interconnecting digital audio devices	306
Recommended further reading	324
Websites	324
<b>Chapter 11 Power amplifiers</b>	<b>325</b>
Domestic power amplifiers	325
Professional amplifier facilities	327
Specifications	328
Coupling	333
<b>Chapter 12 Lines and interconnection</b>	<b>334</b>
Transformers	334
Unbalanced lines	337
Cable effects with unbalanced lines	337
Balanced lines	341
Working with balanced lines	342
Star-quad cable	343
Electronic balancing	344
100 volt lines	345
600 ohms	347
DI boxes	350
Splitter boxes	352
Jackfields (patchbays)	354
Distribution amplifiers	358
<b>Chapter 13 Outboard equipment</b>	<b>359</b>
The graphic equaliser	359
The compressor/limiter	362
Echo and reverb devices	363
Multi-effects processors	367
Frequency shifter	368
Digital delay	368
Miscellaneous devices	369
Connection of outboard devices	370
Recommended further reading	372

<b>Chapter 14 MIDI and synthetic audio control</b>	<b>373</b>
Background	373
What is MIDI?	375
MIDI and digital audio contrasted	375
Basic principles	377
Interfacing a computer to a MIDI system	380
How MIDI control works	384
MIDI control of sound generators	397
General MIDI	406
Scalable polyphonic MIDI (SPMIDI)	408
RMID and XMF files	409
SAOL and SASL in MPEG 4 Structured Audio	409
MIDI and synchronisation	411
MIDI over USB	415
MIDI over IEEE 1394	416
After MIDI?	417
Recommended further reading	418
Websites	418
<b>Chapter 15 Timecode and synchronisation</b>	<b>419</b>
SMPTE/EBU timecode	419
Recording timecode	422
Synchronisers	424
Recommended further reading	428
<b>Chapter 16 Two-channel stereo</b>	<b>429</b>
Principles of loudspeaker stereo	430
Principles of binaural or headphone stereo	438
Loudspeaker stereo over headphones and vice versa	442
Two-channel signal formats	445
Two-channel microphone techniques	447
Binaural recording and 'dummy head' techniques	465
Spot microphones and two-channel panning laws	467
Recommended further reading	468
<b>Chapter 17 Surround sound</b>	<b>469</b>
Three-channel (3-0) stereo	469
Four-channel surround (3-1 stereo)	470
5.1 channel surround (3-2 stereo)	472
Other multichannel configurations	478

Surround sound systems	480
Matrixed surround sound systems	480
Digital surround sound formats	486
Ambisonics	492
Surround sound monitoring	497
Surround sound recording techniques	501
Multichannel panning techniques	516
Recommended further reading	520

**Glossary of terms** **521**

**Appendix 1 Understanding basic equipment specifications** **529**

Frequency response – technical	529
Frequency response – practical examples	531
Harmonic distortion – technical	533
Harmonic distortion – practical examples	535
Dynamic range and signal-to-noise ratio	536
Wow and flutter	537
Intermodulation (IM) distortion	538
Crosstalk	539

**Appendix 2 Record players** **541**

Pickup mechanics	541
RIAA equalisation	545
Cartridge types	546
Connecting leads	547
Arm considerations	548
Laser pickups	549
Recommended further reading	549

**General further reading** **551**

**Index** **553**
