Preface	xii
Chapter 1 Finite State Space, a Trial Run	1
1.1 An Extrinsic Perspective	1
1.1.1. The Structure of Θ_n	1
1.1.2. Back to $\mathbf{M}_1(\mathbb{Z}_n)$	4
1.2 A More Intrinsic Approach	5
1.2.1. The Semigroup Structure on $\mathbf{M}_1(\mathbb{Z}_n)$	5
1.2.2. Infinitely Divisible Flows	6
1.2.3. An Intrinsic Description of $T_{\delta_x}(\mathbf{M}_1(\mathbb{Z}_n))$	8
1.2.4. An Intrinsic Approach to (1.1.6)	9
1.2.5. Exercises	9
1.3 Vector Fields and Integral Curves on $\mathbf{M}_1(\mathbb{Z}_n)$	10
1.3.1. Affine and Translation Invariant Vector Fields	10
1.3.2. Existence of an Integral Curve	11
1.3.3. Uniqueness for Affine Vector Fields	12
1.3.4. The Markov Property and Kolmogorov's Equations	14
1.3.5. Exercises	16
1.4 Pathspace Realization	17
1.4.1. Kolmogorov's Approach	18
1.4.2. Lévy Processes on \mathbb{Z}_n	21
1.4.3. Exercises	24
1.5 Itô's Idea	26
1.5.1. Itô's Construction	26
1.5.2. Exercises	31
1.6 Another Approach	32
1.6.1. Itô's Approximation Scheme	33
1.6.2. Exercises	34
Chapter 2 Moving to Euclidean Space, the Real Thing	35
2.1 Tangent Vectors to $\mathbf{M}_1(\mathbb{R}^n)$	35
2.1.1. Differentiable Curves on $\mathbf{M}_1(\mathbb{R}^n)$	35
2.1.2. Infinitely Divisible Flows on $\mathbf{M}_1(\mathbb{R}^n)$	36
2.1.3. The Tangent Space at δ_x	44
2.1.4. The Tangent Space at General $\mu \in \mathbf{M}_1(\mathbb{R}^n)$	46
2.1.5. Exercises	48

2.2	Vector Fields and Integral Curves on $\mathbf{M}_1(\mathbb{R}^n)$	49
2.2.1.	Existence of Integral Curves	50
2.2.2.	Uniqueness for Affine Vector Fields	52
2.2.3.	The Markov Property and Kolmogorov's Equations	53
2.2.4.	Exercises	54
2.3	Pathspace Realization, Preliminary Version	56
2.3.1.	Kolmogorov's Construction	56
2.3.2.	Path Regularity	57
2.3.3.	Exercises	59
2.4	The Structure of Lévy Processes on \mathbb{R}^n	59
2.4.1.	Construction	60
2.4.2.	Structure	65
2.4.3.	Exercises	69
Chapter 3 Itô's Approach in the Euclidean Setting		73
3.1	Itô's Basic Construction	73
3.1.1.	Transforming Lévy Processes	74
3.1.2.	Hypotheses and Goals	76
3.1.3.	Important Preliminary Observations	79
3.1.4.	The Proof of Convergence	84
3.1.5.	Verifying the Martingale Property in $(\mathbf{G}2)$	89
3.1.6.	Exercises	94
3.2	When Does Itô's Theory Work?	96
3.2.1.	The Diffusion Coefficients	96
3.2.2.	The Lévy Measure	99
3.2.3.	Exercises	104
3.3	Some Examples to Keep in Mind	104
3.3.1.	The Ornstein–Uhlenbeck Process	105
3.3.2.	Bachelier's Model	106
3.3.3.	A Geometric Example	108
3.3.4.	Exercises	110
Chapter 4 Further Considerations		111
4.1	Continuity, Measurability, and the Markov Property	111
4.1.1.	Continuity and Measurability	111
4.1.2.	The Markov Property	113
4.1.3.	Exercises	115
4.2	Differentiability	116
4.2.1.	First Derivatives	116
4.2.2.	Second Derivatives and Uniqueness	122

Chapter 5 Itô's Theory of Stochastic Integration	125
5.1 Brownian Stochastic Integrals	125
5.1.1. A Review of the Paley–Wiener Integral	126
5.1.2. Itô's Extension	128
5.1.3. Stopping Stochastic Integrals and a Further Extension	132
5.1.4. Exercises	134
5.2 Itô's Integral Applied to Itô's Construction Method	137
5.2.1. Existence and Uniqueness	137
5.2.2. Subordination	142
5.2.3. Exercises	144
5.3 Itô's Formula	144
5.3.1. Exercises	150
Chapter 6 Applications of Stochastic Integration to Brownian Motion	151
6.1 Tanaka's Formula for Local Time	151
6.1.1. Tanaka's Construction	152
6.1.2. Some Properties of Local Time	156
6.1.3. Exercises	160
6.2 An Extension of the Cameron–Martin Formula	160
6.2.1. Introduction of a Random Drift	161
6.2.2. An Application to Pinned Brownian Motion	167
6.2.3. Exercises	171
6.3 Homogeneous Chaos	174
6.3.1. Multiple Stochastic Integrals	175
6.3.2. The Spaces of Homogeneous Chaos	177
6.3.3. Exercises	181
Chapter 7 The Kunita–Watanabe Extension	189
7.1 Doob–Meyer for Continuous Martingales	189
7.1.1. Uniqueness	190
7.1.2. Existence	192
7.1.3. Exercises	194
7.2 Kunita–Watanabe Stochastic Integration	195
7.2.1. The Hilbert Structure of $\mathcal{M}_{\text{loc}}(\mathbb{P}; \mathbb{R})$	196
7.2.2. The Kunita–Watanabe Stochastic Integral	198
7.2.3. General Itô's Formula	201
7.2.4. Exercises	203
7.3 Representations of Continuous Martingales	205
7.3.1. Representation via Random Time Change	206
7.3.2. Representation via Stochastic Integration	209
7.3.3. Skorohod's Representation Theorem	213
7.3.4. Exercises	217

Chapter 8 Stratonovich's Theory	221
8.1 Semimartingales and Stratonovich Integrals	221
8.1.1. Semimartingales	221
8.1.2. Stratonovich's Integral	223
8.1.3. Ito's Formula and Stratonovich Integration	225
8.1.4. Exercises	227
8.2 Stratonovich Stochastic Differential Equations	230
8.2.1. Commuting Vector Fields	232
8.2.2. General Vector Fields	234
8.2.3. Another Interpretation	237
8.2.4. Exercises	239
8.3 The Support Theorem	240
8.3.1. The Support Theorem, Part I	242
8.3.2. The Support Theorem, Part II	243
8.3.3. The Support Theorem, Part III	246
8.3.4. The Support Theorem, Part IV	248
8.3.5. The Support Theorem, Part V	252
8.3.6. Exercises	257
Notation	260
References	263
Index	265
