Preface ix

Notation xi
General Notation xi
Functions and Distributions xii
Measures and Integrals xiii
Spaces of Functions, Measures and Distributions xiv
Some Families of Functions xv
Norms, Scalar Products and Seminorms xvi
Notation from Functional Analysis, Operators xvi

Introduction: Pseudo Differential Operators and Markov Processes xix

I Fourier Analysis and Semigroups 1

1 Introduction 3

2 Essentials from Analysis 11
2.1 Calculus Results 11
2.2 Some Topology 20
2.3 Measure Theory and Integration 23
2.4 Convexity 37
2.5 Analytic Functions 40
2.6 Functions and Distributions 43
2.7 Some Functional Analysis 52

2.8 Some Interpolation Theory 69

3 Fourier Analysis and Convolution Semigroups **75**
3.1 The Fourier Transform in $\mathcal{S}(\mathbb{R}^n)$ 75
3.2 The Fourier Transform in $L^p(\mathbb{R}^n)$, $1 \leq p \leq 2$ 83
3.3 The Fourier Transform in $\mathcal{S}'(\mathbb{R}^n)$ 92
3.4 The Paley–Wiener–Schwartz Theorem 98
3.5 Bounded Borel Measures and Positive Definite Functions 103
3.6 Convolution Semigroups and Negative Definite Functions . . . 120
3.7 The Lévy–Khinchin Formula for Continuous Negative Definite Functions 138
3.8 Laplace and Stieltjes Transform, and Completely Monotone Functions 155
3.9 Bernstein Functions and Subordination of Convolution Semigroups 172
3.10 Some Function Spaces related to Continuous Negative Definite Functions 207
3.11 Besov Spaces and Triebel–Lizorkin Spaces 222
3.12 Fourier Multiplier Theorems 233
3.13 Notes to Chapter 3 241

4 One Parameter Semigroups **247**
4.1 Strongly Continuous Operator Semigroups 247
4.2 Analytic Semigroups 282
4.3 Subordination in the Sense of Bochner for Operator Semigroups 295
4.4 Perturbations and Approximations 319
4.5 Generators of Feller Semigroups 332
4.6 Sub-Markovian Semigroups and their Generators 364
4.7 Dirichlet Forms and Generators of Sub-Markovian Semigroups 383
4.8 Extending Feller Semigroups, Resolvents and their Generators 422
4.9 Notes to Chapter 4 446

Bibliography **451**
