

CONTENT

Summary and Preface.....	III
§ 1. Justification of the coordinate-free approach.....	1
§ 2. Vector-spaces.....	8
a) Definition of a vector-space.....	8
b) Inner products and semi-inner products.....	10
c) Bases of a vector-space, orthogonal complement.....	15
d) Linear functions, linear mappings and adjoint mappings..	24
e) Definition of set-operations in vector-spaces.....	31
f) The Farkas' theorem.....	33
g) Projections, generalized inverses and pseudo-inverses...	36
§ 3. Linear statistical models.....	46
a) Definition of linear statistical models.....	46
b) Least squares-estimators and Gauss-Markov estimators....	50
c) Supplements to least squares and Gauss-Markov estimation	70
d) Examples : 1) Restrictions.....	77
2) The regression model.....	78
3) Aitken's formula.....	79
4) Schönfeld's formula in the general regression model.....	80
5) Restrictions on the parameters.....	81
e) The estimation of σ^2	87
f) Stepwise least squares and stepwise Gauss-Markov estimation.....	103
Bibliography.....	110
