

# CONTENTS

Preface . . . . .	vii
Construction of Markov Processes in Axiomatic Potential Theory, HEINZ BAUER, Mathematisches Institut der Universität, Erlangen, West Germany . . . . .	3
Hunt Processes and Standard Processes, R.M. BLUMENTHAL, University of Washington, Seattle, Washington and Mathematisches Institut der Universität, Erlangen, West Germany and R.G. GETOOR, University of California, La Jolla, California . . . . .	13
Markov Processes with Infinities, KAI LAI CHUNG, Stanford University, Stanford, California . . . . .	23
Semiclassical Potential Theory, Z. CIESIELSKI, The Polish Academy of Sciences, Warszawa, Poland and Rockefeller University, New York, New York . . . . .	33
Excessive Functions for a Class of Continuous Time Markov Chains, G.E. DENZEL, J.G. KEMENY, J.L. SNELL, Dartmouth College, Hanover, New Hampshire, (J.L. Snell presented the paper) . . . . .	61
On Random Time Substitutions and the Feller Property, JOHN LAMPERTI, Dartmouth College, Hanover, New Hampshire and University of Cambridge, Cambridge, England . . . . .	87
On the Multiplicative Decomposition of Positive Supermartingales, P.A. MEYER, Universite de Strasbourg, Strasbourg, France . . . . .	103

---

Polar Sets for Processes with Stationary Independent Increments, STEVEN OREY, University of Minnesota, Minneapolis, Minnesota . . . . .	117
Random Walks on the Line, DONALD S. ORNSTEIN, Stanford University, Stanford, California . . . . .	127
Potentials Associated with Recurrent Stable Processes, SIDNEY C. PORT, University of California, Los Angeles, California . . . . .	135
Application of Unsmoothing and Fourier Analysis to Random Walks, CHARLES J. STONE, University of California, Los Angeles, California . . . . .	165
Penetration Times and Passage Times, D. STROOCK, Courant Institute of Mathematical Sciences, New York, New York .	193
Limit Theorem for a Class of Branching Processes, SHINZO WATANABE, Kyoto University, Kyoto, Japan and University of Washington, Seattle, Washington . . . . .	205
Index . . . . .	233
