Preface	vii
1 Introduction to Constructive Mathematics	1
1.1 What Is Constructive Mathematics?	1
1.2 A Very Brief History	5
1.3 Intuitionistic Logic	7
1.4 Informal Set Theory	11
2 Techniques of Elementary Analysis	25
2.1 The Real Number Line	25
2.2 Metric Spaces	37
2.3 Normed Linear Spaces	47
3 The λ-Technique	63
3.1 Introduction to the Technique	63
3.2 Ishihara's Tricks	71
4 Finite-Dimensional and Hilbert Spaces	81
4.1 Finite-Dimensional Spaces	81
4.2 Best Approximation	88
4.3 Hilbert Spaces	92
5 Linearity and Convexity	107

5.1	Crossing Boundaries	107
5.2	Separation Theorems	113
5.3	The Hahn–Banach Theorem	122
5.4	Locally Convex Spaces	127
6	Operators and Locatedness	147
6.1	Smooth and Uniformly Smooth Normed Spaces	147
6.2	Locatedness of Convex Sets	153
6.3	Adjoint	166
6.4	Functions of Selfadjoint Operators	170
6.5	Locating the Kernel and the Range	180
6.6	Baire’s Theorem, with Applications	189
	References	203
	Index	209
