Preface v

Notation vii

PART I. DIRICHLET FORMS

Chapter 1. Basic Theory of Dirichlet Forms 3

§1.1. Basic notions 3

§1.2. Examples 6

§1.3. Closed forms and semigroups 14

§1.4. Dirichlet forms and Markovian semigroups 22

§1.5. Transience and extended Dirichlet spaces 32

Chapter 2. The Scope of Dirichlet Forms 41

§2.1. Closability and the smallest closed extension 41

§2.2. Beurling-Deny formulae 48

§2.3. Maximum Markovian extensions 53

Chapter 3. Potential Theory of Dirichlet Forms 61

§3.1. Capacity and quasi-continuity 61

§3.2. Measures of finite energy integrals 68

§3.3. Equilibrium potentials and reduced functions 74

PART II. SYMMETRIC MARKOV PROCESSES

Chapter 4. Analysis in Symmetric Markov Processes	87
§4.1. Elements in the Hunt process	87
§4.2. Smallness of sets and symmetry	95
§4.3. Identification with potential theoretic notions	102
§4.4. Hitting times and orthogonal projections	108
§4.5. Continuity, killing, and jumps of sample paths	113
Chapter 5. Further Analysis by Additive Functionals	123
§5.1. Positive continuous additive functionals and smooth measures	123
§5.2. Decomposition of additive functionals of finite energy	134
§5.3. Continuous additive functionals of zero energy	141
§5.4. Stochastic calculus related to the Dirichlet form	151
§5.5. Random time changes	165
Chapter 6. Construction of Symmetric Markov Processes	173
§6.1. Construction of a Markovian transition function	173
§6.2. Construction of a symmetric Hunt process	177
Notes	187
Bibliography	191
Index	195
