CONTENTS

Preface vii

Chapter 0. PRELIMINARIES

1. Notation 1
2. The Monotone Class Theorem 5
3. Topological Spaces 8

Chapter I. MARKOV PROCESSES

1. General Definitions 11
2. Transition Functions 14
3. General Definitions Continued 20
4. Equivalent Processes 24
5. The Measures P^{μ} 25
6. Stopping Times 30
7. Stopping Times for Markov Processes 36
8. The Strong Markov Property 37
9. Standard Processes 44
10. Measurability of Hitting Times 52
11. Further Properties of Hitting Times 61
12. Regular Step Processes 63

Chapter II. EXCESSIVE FUNCTIONS

1. Introduction 69
2. Excessive Functions 72
3. Exceptional Sets 79
4. The Fine Topology 84
5. Alternative Characterization of Excessive Functions 89

Chapter III. MULTIPLICATIVE FUNCTIONALS AND SUBPROCESSES

1. Multiplicative Functionals 97
2. Subordinate Semigroups 101
3. Subprocesses 105
4. Resolvents and Strong Multiplicative Functionals 113
5. Excessive Functions 125
6. A Theorem of Hunt 136

Chapter IV. ADDITIVE FUNCTIONALS AND THEIR POTENTIALS

1. Additive Functionals 148
2. Potentials of Additive Functionals 154
3. Potentials of Continuous Additive Functionals 160
4. Potentials of Natural Additive Functionals 170
5. Classification of Excessive Functions 186

Chapter V. FURTHER PROPERTIES OF CONTINUOUS ADDITIVE FUNCTIONALS

1. Reference Measures 196
2. Continuous Additive Functionals 205
3. Fine Supports and Local Times 212
4. Balayage of Additive Functionals 228
5. Processes with Identical Hitting Distributions 233

Chapter VI. DUAL PROCESSES AND POTENTIAL THEORY

1. Dual Processes 252
2. Potentials of Measures 265
3. Potentials of Additive Functionals 279
4. Capacity and Related Topics 283

Notes and Comments 295
