

Contents

Preface to the Third Edition	VII
Preface to the Second Edition	IX
1 Error Analysis	1
1.1 Representation of Numbers	2
1.2 Roundoff Errors and Floating-Point Arithmetic	4
1.3 Error Propagation	9
1.4 Examples	21
1.5 Interval Arithmetic; Statistical Roundoff Estimation	27
Exercises for Chapter 1	33
References for Chapter 1	36
2 Interpolation	37
2.1 Interpolation by Polynomials	38
2.1.1 Theoretical Foundation: The Interpolation Formula of Lagrange	38
2.1.2 Neville's Algorithm	40
2.1.3 Newtons Interpolation Formula: Divided Differences	43
2.1.4 The Error in Polynomial Interpolation	48
2.1.5 Hermite Interpolation	51
2.2 Interpolation by Rational Functions	59
2.2.1 General Properties of Rational Interpolation	59
2.2.2 Inverse and Reciprocal Differences. Thiele's Continued Fraction	64
2.2.3 Algorithms of the Neville Type	68
2.2.4 Comparing Rational and Polynomial Interpolation	73
2.3 Trigonometric Interpolation	74
2.3.1 Basic Facts	74
2.3.2 Fast Fourier Transforms	80
2.3.3 The Algorithms of Goertzel and Reinsch	88
2.3.4 The Calculation of Fourier Coefficients. Attenuation Factors	92

2.4	Interpolation by Spline Functions	97
2.4.1	Theoretical Foundations	97
2.4.2	Determining Interpolating Cubic Spline Functions	101
2.4.3	Convergence Properties of Cubic Spline Functions	107
2.4.4	B-Splines	111
2.4.5	The Computation of B-Splines	117
2.4.6	Multi-Resolution Methods and B-Splines	121
	Exercises for Chapter 2	134
	References for Chapter 2	143
3	Topics in Integration	145
3.1	The Integration Formulas of Newton and Cotes	146
3.2	Peano's Error Representation	151
3.3	The Euler-Maclaurin Summation Formula	156
3.4	Integration by Extrapolation	160
3.5	About Extrapolation Methods	165
3.6	Gaussian Integration Methods	171
3.7	Integrals with Singularities	181
	Exercises for Chapter 3	184
	References for Chapter 3	188
4	Systems of Linear Equations	190
4.1	Gaussian Elimination. The Triangular Decomposition of a Matrix	190
4.2	The Gauss-Jordan Algorithm	200
4.3	The Choleski Decomposition	204
4.4	Error Bounds	207
4.5	Roundoff-Error Analysis for Gaussian Elimination	215
4.6	Roundoff Errors in Solving Triangular Systems	221
4.7	Orthogonalization Techniques of Householder and Gram-Schmidt	223
4.8	Data Fitting	231
4.8.1	Linear Least Squares. The Normal Equations	232
4.8.2	The Use of Orthogonalization in Solving Linear Least-Squares Problems	235
4.8.3	The Condition of the Linear Least-Squares Problem	236
4.8.4	Nonlinear Least-Squares Problems	241
4.8.5	The Pseudoinverse of a Matrix	243
4.9	Modification Techniques for Matrix Decompositions	247
4.10	The Simplex Method	256
4.11	Phase One of the Simplex Method	268
4.12	Appendix: Elimination Methods for Sparse Matrices	272
	Exercises for Chapter 4	280
	References for Chapter 4	286

5	Finding Zeros and Minimum Points by Iterative Methods	289
5.1	The Development of Iterative Methods	290
5.2	General Convergence Theorems	293
5.3	The Convergence of Newton's Method in Several Variables	298
5.4	A Modified Newton Method	302
5.4.1	On the Convergence of Minimization Methods	303
5.4.2	Application of the Convergence Criteria to the Modified Newton Method	308
5.4.3	Suggestions for a Practical Implementation of the Modified Newton Method. A Rank-One Method Due to Broyden	313
5.5	Roots of Polynomials. Application of Newton's Method	316
5.6	Sturm Sequences and Bisection Methods	328
5.7	Bairstow's Method	333
5.8	The Sensitivity of Polynomial Roots	335
5.9	Interpolation Methods for Determining Roots	338
5.10	The Δ^2 -Method of Aitken	344
5.11	Minimization Problems without Constraints	349
	Exercises for Chapter 5	358
	References for Chapter 5	361
6	Eigenvalue Problems	364
6.0	Introduction	364
6.1	Basic Facts on Eigenvalues	366
6.2	The Jordan Normal Form of a Matrix	369
6.3	The Frobenius Normal Form of a Matrix	375
6.4	The Schur Normal Form of a Matrix: Hermitian and Normal Matrices; Singular Values of Matrixes	379
6.5	Reduction of Matrices to Simpler Form	386
6.5.1	Reduction of a Hermitian Matrix to Tridiagonal Form: The Method of Householder	388
6.5.2	Reduction of a Hermitian Matrix to Tridiagonal or Diagonal Form: The Methods of Givens and Jacobi	394
6.5.3	Reduction of a Hermitian Matrix to Tridiagonal Form: The Method of Lanczos	398
6.5.4	Reduction to Hessenberg Form	402
6.6	Methods for Determining the Eigenvalues and Eigenvectors	405
6.6.1	Computation of the Eigenvalues of a Hermitian Tridiagonal Matrix	405
6.6.2	Computation of the Eigenvalues of a Hessenberg Matrix. The Method of Hyman	407
6.6.3	Simple Vector Iteration and Inverse Iteration of Wielandt	408
6.6.4	The LR and QR Methods	415
6.6.5	The Practical Implementation of the QR Method	425

6.7	Computation of the Singular Values of a Matrix	436
6.8	Generalized Eigenvalue Problems	440
6.9	Estimation of Eigenvalues	441
	Exercises for Chapter 6	455
	References for Chapter 6	462
7	Ordinary Differential Equations	465
7.0	Introduction	465
7.1	Some Theorems from the Theory of Ordinary Differential Equations	467
7.2	Initial-Value Problems	471
7.2.1	One-Step Methods: Basic Concepts	471
7.2.2	Convergence of One-Step Methods	477
7.2.3	Asymptotic Expansions for the Global Discretization Error of One-Step Methods	480
7.2.4	The Influence of Rounding Errors in One-Step Methods	483
7.2.5	Practical Implementation of One-Step Methods	485
7.2.6	Multistep Methods: Examples	492
7.2.7	General Multistep Methods	495
7.2.8	An Example of Divergence	498
7.2.9	Linear Difference Equations	501
7.2.10	Convergence of Multistep Methods	504
7.2.11	Linear Multistep Methods	508
7.2.12	Asymptotic Expansions of the Global Discretization Error for Linear Multistep Methods	513
7.2.13	Practical Implementation of Multistep Methods	517
7.2.14	Extrapolation Methods for the Solution of the Initial-Value Problem	521
7.2.15	Comparison of Methods for Solving Initial-Value Problems	524
7.2.16	Stiff Differential Equations	525
7.2.17	Implicit Differential Equations. Differential-Algebraic Equations	531
7.2.18	Handling Discontinuities in Differential Equations	536
7.2.19	Sensitivity Analysis of Initial-Value Problems	538
7.3	Boundary-Value Problems	539
7.3.0	Introduction	539
7.3.1	The Simple Shooting Method	542
7.3.2	The Simple Shooting Method for Linear Boundary-Value Problems	548
7.3.3	An Existence and Uniqueness Theorem for the Solution of Boundary-Value Problems	550
7.3.4	Difficulties in the Execution of the Simple Shooting Method	552
7.3.5	The Multiple Shooting Method	557

7.3.6	Hints for the Practical Implementation of the Multiple Shooting Method	561
7.3.7	An Example: Optimal Control Program for a Lifting Reentry Space Vehicle	565
7.3.8	Advanced Techniques in Multiple Shooting	572
7.3.9	The Limiting Case $m \rightarrow \infty$ of the Multiple Shooting Method (General Newton's Method, Quasilinearization)	577
7.4	Difference Methods	582
7.5	Variational Methods	586
7.6	Comparison of the Methods for Solving Boundary-Value Problems for Ordinary Differential Equations	596
7.7	Variational Methods for Partial Differential Equations	
	The Finite-Element Method	600
	Exercises for Chapter 7	607
	References for Chapter 7	613
8	Iterative Methods for the Solution of Large Systems of Linear Equations. Additional Methods	619
8.0	Introduction	619
8.1	General Procedures for the Construction of Iterative Methods	621
8.2	Convergence Theorems	623
8.3	Relaxation Methods	629
8.4	Applications to Difference Methods—An Example	639
8.5	Block Iterative Methods	645
8.6	The ADI-Method of Peaceman and Rachford	647
8.7	Krylov Space Methods for Solving Linear Equations	657
8.7.1	The Conjugate-Gradient Method of Hestenes and Stiefel	658
8.7.2	The GMRES Algorithm	667
8.7.3	The Biorthogonalization Method of Lanczos and the QMR algorithm	680
8.7.4	The Bi-CG and BI-CGSTAB Algorithms	686
8.8	Buneman's Algorithm and Fourier Methods for Solving the Discretized Poisson Equation	691
8.9	Multigrid Methods	702
8.10	Comparison of Iterative Methods	712
	Exercises for Chapter 8	719
	References for Chapter 8	727
	General Literature on Numerical Methods	730
	Index	732
