

Inhalt

Manfred Prenzel & Katrin Schöps

The educational quality of schools (BiQua)

A priority programme of the German Research Foundation (DFG)7

Detailed analyses of Large-Scale-Assessments

Reinhard Pekrun, Rudolf vom Hofe, Werner Blum, Anne C. Frenzel,

Thomas Goetz & Sebastian Wartha

Development of mathematical competencies in adolescence

The PALMA longitudinal study 17

Mareike Kunter, Uta Klusmann, Thamar Dubberke, Jürgen Baumert,

Werner Blum, Martin Brunner, Alexander Jordan, Stefan Krauss,

Katrin Löwen, Michael Neubrand & Yi-Miau Tsai

Linking aspects of teacher competence to their instruction

Results from the COACTIV project.....39

Timo Ehmke & Thilo Siegle

How well do parents do in PISA?

Results concerning the mathematical competency of parents

and children in the German PISA sample.....61

Tina Seidel, Manfred Prenzel, Rolf Rimmel, Constanze Herweg,

Mareike Kobarg, Katharina Schwindt & Inger Marie Dalehefte

Science teaching and learning in German physics classrooms

Findings from the IPN Video Study.....79

Improving teaching quality

Katrin Rakoczy, Eckhard Klieme, Barbara Drollinger-Vetter,

Frank Lipowsky, Christine Pauli & Kurt Reusser

Structure as a quality feature in mathematics instruction

Cognitive and motivational effects of a structured organisation of the

learning environment vs. a structured presentation of learning content..... 101

Johannes Günther, Ernst Kircher & Beate Sodian

“Nature of Science” – a teacher training programme for

primary school teachers 121

Thilo Kleickmann, Ilonca Hardy, Angela Jonen,

Eva Blumberg & Kornelia Möller

Learning environments in primary school science

Scaffolding students’ and teachers’ processes of conceptual development..... 137

Cornelia Gräsel, Christian Pröbstel, Julia Freienberg & Ilka Parchmann

Fostering collaboration among secondary school science teachers..... 157

<i>Evelyn Komorek, Regina Bruder, Christina Collet & Bernhard Schmitz</i> Contents and results of an intervention study in mathematics lessons at secondary level I with a teaching concept to support mathematical problem-solving and self-regulative competencies	175
Student learning	
<i>Franziska Perels, Barbara Otto, Bernhard Schmitz & Regina Bruder</i> Evaluation of a training programme to improve mathematical as well as self-regulatory competencies.....	197
<i>Claudia Leopold, Viola den Elzen-Rump & Detlev Leutner</i> Self-regulated learning from science texts	221
<i>Alexander Renkl, Tatjana S. Hilbert, Silke Schworm & Kristina Reiss</i> Cognitive skill acquisition from complex examples A taxonomy of examples and tentative instructional guidelines	239
<i>Kristina Reiss, Aiso Heinze, Stephan Kessler, Franziska Rudolph-Albert & Alexander Renkl</i> Fostering argumentation and proof competencies in the mathematics classroom	251
Contextual factors	
<i>Leonie Herwartz-Emden, Verena Schurt & Wiebke Waburg</i> Interest, self-efficacy, and achievement evaluations in physics A study on the effects of single-sex education in German schools.....	265
<i>Ursula Kessels & Bettina Hannover</i> How the image of maths and science affects the development of academic interests	283
<i>Fiona Lorenz & Elke Wild</i> Parental involvement in schooling Results concerning its structure and impact on students' motivation.....	299
<i>Sebastian Schmid, Stefan Fries, Manfred Hofer, Franziska Dietz, Heinz Reinders & Marten Clausen</i> The theory of motivational action conflicts Empirical studies and practical consequences	317
Authors.....	333
