

CONTENTS

Preface	v
A Note on Numerical Recipes Utility Functions	vii
1. Preliminaries	1
2. Solution of Linear Algebraic Equations	6
3. Interpolation and Extrapolation	36
4. Integration of Functions	50
5. Evaluation of Functions	65
6. Special Functions	79
7. Random Numbers	125
8. Sorting	140
9. Root Finding and Sets of Equations	153
10. Minimization or Maximization of Functions	167
11. Eigensystems	184
12. Fast Fourier Transform	194
13. Fourier and Spectral Applications	207
14. Statistical Description of Data	219
15. Modeling of Data	243
16. Integration of Ordinary Differential Equations	259
17. Two Point Boundary Value Problems	273
18. Integral Equations and Inverse Theory	276
19. Partial Differential Equations	280
20. Less-Numerical Algorithms	285
Appendix A: Table of Function Declarations (<code>nr.h</code>)	295
Appendix B: Utility Functions and Classes	304
Index of Demonstrated Routines	315
