<b>1</b>	<b>Einstein's Theory of Atom–Radiation Interaction</b> . . . . .	1
1.1	The A and B Coefficients . . . . .	1
1.2	Thermal Equilibrium . . . . .	3
1.3	Photon Distribution and Fluctuations . . . . .	4
1.4	Light Beam Incident on Atoms . . . . .	5
1.5	An Elementary Laser Theory . . . . .	5
1.5.1	Threshold and Population Inversion . . . . .	6
1.5.2	Steady State . . . . .	7
1.5.3	Linear Stability Analysis . . . . .	8
	References . . . . .	9
	Further Reading . . . . .	9
<b>2</b>	<b>Atom–Field Interaction: Semiclassical Approach</b> . . . . .	11
2.1	Broad-Band Radiation Spectrum . . . . .	14
2.2	Rabi Oscillations . . . . .	15
2.3	Bloch's Equations . . . . .	16
2.4	Decay to an Unobserved Level . . . . .	17
2.5	Decay Between Levels . . . . .	18
2.6	Optical Nutation . . . . .	18
	References . . . . .	19
	Further Reading . . . . .	19
<b>3</b>	<b>Quantization of the Electromagnetic Field</b> . . . . .	21
3.1	Fock States . . . . .	24
3.2	Density of Modes . . . . .	25
3.3	Commutation Relations . . . . .	26
	Reference . . . . .	28
	Further Reading . . . . .	28
<b>4</b>	<b>States of the Electromagnetic Field I</b> . . . . .	31
4.1	Further Properties . . . . .	32
4.1.1	Coherent States are Minimum Uncertainty States . . . . .	32
4.1.2	Coherent States are not Orthogonal . . . . .	32
4.1.3	Coherent States are Overcomplete . . . . .	33
4.1.4	The Displacement Operator . . . . .	33

4.1.5	Photon Statistics .....	34
4.1.6	Coordinate Representation .....	35
4.2	Mixed State: Thermal Radiation .....	35
	References .....	39
	Further Reading .....	39
<b>5</b>	<b>States of the Electromagnetic Field II</b> .....	<b>41</b>
5.1	Squeezed States: General Properties and Detection .....	41
5.1.1	The Squeeze Operator and the Squeezed State .....	43
5.1.2	The Squeezed State is an Eigenstate of $A$ .....	44
5.1.3	Calculation of Moments with Squeezed States .....	44
5.1.4	Quadrature Fluctuations .....	45
5.1.5	Photon Statistics .....	46
5.2	Multimode Squeezed States .....	47
5.3	Detection of Squeezed States .....	47
5.3.1	Ordinary Homodyne Detection .....	48
5.3.2	Balanced Homodyne Detection .....	50
5.3.3	Heterodyne Detection .....	50
	References .....	51
<b>6</b>	<b>Quantum Theory of Coherence</b> .....	<b>53</b>
6.1	One-Atom Detector .....	54
6.2	The $n$ -Atom Detector .....	57
6.3	General Properties of the Correlation Functions .....	59
6.4	Young's Interference and First-Order Correlation .....	60
6.5	Second-Order Correlations: Photon Bunching and Antibunching .....	62
6.5.1	Classical Second-Order Coherence .....	63
6.5.2	Quantum Theory of Second-Order Coherence .....	65
6.6	Photon Counting .....	67
6.6.1	Some Simple Examples .....	70
6.6.2	Quantum Mechanical Photon Count Distribution .....	71
6.6.3	Particular Examples .....	72
	References .....	72
	Further Reading .....	72
<b>7</b>	<b>Phase Space Description</b> .....	<b>73</b>
7.1	$Q$ -Representation: Antinormal Ordering .....	73
7.1.1	Normalization .....	73
7.1.2	Average of Antinormally Ordered Products .....	74
7.1.3	Some Examples .....	74
7.1.4	The Density Operator in Terms of the Function $Q$ .....	75
7.2	Characteristic Function .....	76
7.3	$P$ Representation: Normal Ordering .....	76
7.3.1	Normalization .....	76

7.3.2	Averages of Normally Ordered Products . . . . .	77
7.3.3	Some Interesting Properties . . . . .	77
7.3.4	Some Examples . . . . .	77
7.4	The Wigner Distribution: Symmetric Ordering . . . . .	79
7.4.1	Moments . . . . .	80
	References . . . . .	82
	Further Reading . . . . .	82
<b>8</b>	<b>Atom–Field Interaction</b> . . . . .	<b>83</b>
8.1	Atom–Field Hamiltonian and the Dipole Approximation . . . . .	83
8.2	A Two-Level Atom Interacting with a Single Field Mode . . . . .	85
8.3	The Dressed State Picture: Quantum Rabi Oscillations . . . . .	88
8.4	Collapse and Revivals . . . . .	91
	References . . . . .	94
	Further Reading . . . . .	94
<b>9</b>	<b>System–Reservoir Interactions</b> . . . . .	<b>97</b>
9.1	Quantum Theory of Damping . . . . .	97
9.2	General Properties . . . . .	100
9.3	Expectation Values of Relevant Physical Quantities . . . . .	101
9.4	Time Evolution of the Density Matrix Elements . . . . .	102
9.5	The Glauber–Sudarshan Representation, and the Fokker– Planck Equation . . . . .	105
9.6	Time-Dependent Solution: The Method of the Eigenfunctions . . . . .	106
9.6.1	General Solution . . . . .	107
9.7	Langevin’s Equations . . . . .	108
9.7.1	Calculation of the Correlation Function $\langle F(t')F(t'')^\dagger \rangle_B$ . . . . .	109
9.7.2	Differential Equation for the Photon Number . . . . .	109
9.8	Other Master Equations . . . . .	110
9.8.1	Two-Level Atom in a Thermal Bath . . . . .	110
9.8.2	Damped Harmonic Oscillator in a Squeezed Bath . . . . .	111
9.8.3	Application: Spontaneous Decay in a Squeezed Vacuum . . . . .	114
	References . . . . .	116
	Further Reading . . . . .	117
<b>10</b>	<b>Resonance Fluorescence</b> . . . . .	<b>119</b>
10.1	Background . . . . .	119
10.2	Heisenberg’s Equations . . . . .	120
10.3	Spectral Density, and the Wiener–Khinchine Theorem . . . . .	124
10.4	Emission Spectra from Strongly Driven Two-Level Atoms . . . . .	126
10.5	Intensity Correlations . . . . .	129
	References . . . . .	133
	Further Reading . . . . .	134

<b>11 Quantum Laser Theory: Master Equation Approach</b> . . . . .	135
11.1 Heuristic Discussion of Injection Statistics . . . . .	136
11.2 Master Equation for Generalized Pump Statistics . . . . .	137
11.3 The Quantum Theory of the Laser: Random Injection ( $p = 0$ ) 139	
11.3.1 Photon Statistics . . . . .	140
11.3.2 The Fokker–Planck Equation: Laser Linewidth . . . . .	143
11.3.3 Alternative Derivation of the Laser Linewidth . . . . .	144
11.4 Quantum Theory of the Micromaser: Random injection ( $p = 0$ ) 146	
11.4.1 Generalities . . . . .	146
11.4.2 The Micromaser . . . . .	147
11.4.3 Trapping States . . . . .	149
11.5 Quantum Theory of the Laser and the Micromaser with Pump Statistics ( $p \neq 0$ ) . . . . .	153
References . . . . .	157
Further Reading . . . . .	157
<b>12 Quantum Laser Theory: Langevin Approach</b> . . . . .	159
12.1 Quantum Langevin Equations . . . . .	159
12.1.1 The Generalized Einstein's Relations . . . . .	160
12.1.2 The Atomic Noise Moments . . . . .	161
12.2 $C$ -Number Langevin Equations . . . . .	165
12.2.1 Adiabatic Approximation . . . . .	166
12.3 Phase and Intensity Fluctuations . . . . .	167
12.4 Discussion . . . . .	168
References . . . . .	170
Further Reading . . . . .	171
<b>13 Quantum Noise Reduction 1</b> . . . . .	173
13.1 Correlated Emission Laser Systems . . . . .	175
13.1.1 The Quantum Beat Laser . . . . .	175
13.1.2 Other CEL Systems . . . . .	181
References . . . . .	182
Further Reading . . . . .	182
<b>14 Quantum Noise Reduction 2</b> . . . . .	185
14.1 Introduction to Non-Linear Optics . . . . .	185
14.1.1 Multiple-Photon Transitions . . . . .	185
14.2 Parametric Processes Without Losses . . . . .	189
14.3 The Input–Output Theory . . . . .	191
14.4 The Degenerate Parametric Oscillator . . . . .	195
14.5 Experimental Results . . . . .	198
References . . . . .	201

<b>15 Quantum Phase</b> .....	203
15.1 The Dirac Phase .....	203
15.2 The Louisell Phase .....	204
15.3 The Susskind–Glogower Phase .....	204
15.4 The Pegg–Barnett Phase .....	208
15.4.1 Applications .....	211
15.5 Phase Fluctuations in a Laser .....	213
References .....	217
Further Reading .....	217
<b>16 Quantum Trajectories</b> .....	219
16.1 Montecarlo Wavefunction Method .....	220
16.1.1 The Montecarlo Method is Equivalent, on the Average, to the Master Equation .....	221
16.2 The Stochastic Schrödinger Equation .....	223
16.3 Stochastic Schrödinger Equations and Dissipative Systems ...	225
16.4 Simulation of a Monte Carlo SSE .....	227
16.5 Simulation of the Homodyne SSDE .....	232
16.6 Numerical Results and Localization .....	236
16.6.1 Quantum Jumps Evolution .....	236
16.6.2 Diffusion-like Evolution .....	237
16.6.3 Analytical Proof of Localization .....	239
16.7 Conclusions .....	242
References .....	244
Further Reading .....	245
<b>17 Atom Optics</b> .....	247
17.1 Optical Elements .....	247
17.2 Atomic Diffraction from an Optical Standing Wave .....	248
17.2.1 Theory .....	249
17.2.2 Particular Cases .....	252
17.3 Atomic Focusing .....	255
17.3.1 The Model .....	255
17.3.2 Initial Conditions and Solution .....	257
17.3.3 Quantum and Classical Foci .....	258
17.3.4 Thin Versus Thick Lenses .....	258
17.3.5 The Quantum Focal Curve .....	259
17.3.6 Aberrations .....	261
References .....	262
<b>18 Measurements, Quantum Limits and All That</b> .....	263
18.1 Quantum Standard Limit .....	263
18.1.1 Quantum Standard Limit for a Free Particle .....	263
18.1.2 Standard Quantum Limit for an Oscillator .....	264

18.1.3	Thermal Effects	265
18.2	Quantum Non-Demolition (QND) Measurements	266
18.2.1	The Free System	266
