Illustrations

Figures

| | | |
|---|--|-----|
| 1 | Frequencies of D/(H+F) ratios | 73 |
| 2 | Frequencies of D/(D+H+F) proportions | 74 |
| 3 | Plot of D against H values (NP and S only) | 77 |
| 4 | Frequencies of complexity levels | 88 |
| 5 | Tree diagram of typological divergence | 229 |

Maps

| | | |
|----|---|----|
| 1 | Sample areas | 28 |
| 2 | Modern language families | 28 |
| 3 | Sample languages | 29 |
| 4 | Head-marking languages in sample | 29 |
| 5 | Double/split marking languages in sample | 30 |
| 6 | Dependent-marking languages in sample | 30 |
| 7 | Ergative languages in sample | 31 |
| 8 | Stative-active languages in sample | 31 |
| 9 | Languages with inclusive/exclusive oppositions | 32 |
| 10 | Languages with alienable/inalienable possession | 32 |
| 11 | Languages with noun classes | 33 |
| 12 | Languages with numeral classifiers | 33 |

Tables

| | | |
|----|---|-----|
| 1 | Bioregions and sampled areas | 27 |
| 2 | Word order and type of verb inflection in two surveys | 43 |
| 3 | Frequencies of marking types in three constituents | 69 |
| 4 | Frequencies of marking types in constituents, by area | 70 |
| 5 | Areal preferences for head and dependent marking (NP and S only) | 72 |
| 6 | D points in NP + S | 75 |
| 7 | H points in NP + S | 76 |
| 8 | Noun/pronoun splits | 78 |
| 9 | Head marking in NP and S constituents, by area | 83 |
| 10 | Dependent marking in NP and S constituents, by area | 83 |
| 11 | Support for correlations of NP and D marking, and S and H marking, shown by languages in Tables 9–10 | 84 |
| 12 | Areal distribution of complexity levels | 89 |
| 13 | Frequencies of alignment patterns among parts of speech | 90 |
| 14 | Types and frequencies of ergative/accusative splits | 91 |
| 15 | Areal distribution of word order | 94 |
| 16 | Complexity and head/dependent type | 99 |
| 17 | Areal breakdown: Complexity and head/dependent type | 100 |
| 18 | Alignment and head/dependent type | 101 |
| 19 | Clause head marking and alignment of verbal morphology | 102 |
| 20 | Alignment and head/dependent type | 104 |
| 21 | Word order and head/dependent type | 105 |
| 22 | Word order and head/dependent type: New World only | 106 |

| | | |
|----|---|-----|
| 23 | Word order and amount of head-marking morphology on the verb | 106 |
| 24 | Word order and head/dependent type: Areal frequencies | 107 |
| 25 | Complexity and alignment | 110 |
| 26 | Complexity and alignment, grouped and for three major alignments only | 110 |
| 27 | Mean complexity of dominant alignment types, by area | 111 |
| 28 | Complexity and alignment: Trends in Table 27 | 111 |
| 29 | Complexity and word order | 112 |
| 30 | Alignment and word order | 112 |
| 31 | Dominant alignment and word order: Two-way breakdown | 113 |
| 32 | Alignment of verbal morphology and word order: Two-way breakdown | 113 |
| 33 | Summary of correlations for type features | 114 |
| 34 | Inalienable possession and marking of the NP | 119 |
| 35 | Inalienable possession and dominant alignment | 122 |
| 36 | Geography and inalienable possession | 123 |
| 37 | Geography and inclusive/exclusive oppositions | 124 |
| 38 | Concord subclass, gender, and macrogender in Chechen | 126 |
| 39 | Loci of class marking (relative to the class-bearing noun) | 128 |
| 40 | Gender hotbeds and outliers | 132 |
| 41 | Frequencies of loci of class marking, plus type features | 132 |
| 42 | Plurality neutralization, by part of speech and continent | 148 |
| 43 | Alignment and plurality neutralization (languages with nonzero D and H) | 149 |
| 44 | Head/dependent type and plurality neutralization (languages with nonzero D and H) | 149 |
| 45 | Valence-affecting processes, by area | 155 |
| 46 | Types and frequencies of voice systems | 155 |
| 47 | Valence-increasing (+) and decreasing (-) voice systems and alignment | 156 |
| 48 | A-affecting and O-affecting voice systems and head/dependent marking | 157 |
| 49 | Locus of marking and category of agreement or classification | 161 |
| 50 | Genetic vs. areal stability | 165 |
| 51 | Numerical values of gross types | 166 |
| 52 | Hierarchy of features based on number of gross types per stock | 167 |
| 53 | Hierarchy of features based on number of gross types per area | 167 |
| 54 | Conformity to majority type within groups | 171 |
| 55 | Valence-changing directionalities exhibited by groups | 174 |

| | | |
|----|---|-----|
| 56 | Conformity to preference for valence increase (“+”), decrease (“-”), or both within groups | 176 |
| 57 | Conformity to preference for A-affecting or O-affecting valence changes | 177 |
| 58 | Inclusive/exclusive: Departures from modal type | 179 |
| 59 | Inalienable possession: Departures from modal type | 180 |
| 60 | Noun classes: Departures from modal type | 182 |
| 61 | Means and frequencies of head/dependent marking and complexity, by area | 186 |
| 62 | Dominant alignment by area | 187 |
| 63 | Distributions required for significance on the test of Dryer 1989a | 188 |
| 64 | Significance levels for difference in frequency of H/D type and alignment, by area and type of area | 189 |
| 65 | Languages with high levels of complexity | 193 |
| 66 | Average range and degree of complexity by kind of area | 194 |
| 67 | Levels of significance for word order differences | 196 |
| 68 | Inclusive/exclusive oppositions | 197 |
| 69 | Number and percent of languages having noun classes, by area | 198 |
| 70 | Number of languages having numeral classifiers, by area | 199 |
| 71 | Significance levels for areal differences in frequency of noun classes and numeral classifiers | 200 |
| 72 | Plurality neutralization | 201 |
| 73 | Inalienable possession | 202 |
| 74 | Number of languages having PP's, by area | 203 |
| 75 | Global clines | 206 |
| 76 | Significance levels for areal differences in frequency of three clinally distributed properties | 207 |
| 77 | Mean head/dependent proportions, in rank order | 218 |
| 78 | Likeness: Analysis 1 | 220 |
| 79 | Nearness: Analysis 1 | 220 |
| 80 | Likeness: Analysis 4 | 222 |
| 81 | Nearness: Analysis 4 | 222 |
| 82 | Summary of correlations between and within areas (12 areas) | 223 |
| 83 | Summary of correlations between and within areas (7 areas) | 223 |
| 84 | Occurrence of high and low likeness and nearness values | 225 |
| 85 | P propensity for affinity, in decreasing order | 226 |
| 86 | Percentage of types by area | 227 |
| 87 | Instances where areal frequencies are one standard deviation or more from the mean | 227 |

| | | |
|----|--|-----|
| 88 | Genetic densities of sample areas | 233 |
| 89 | Areal means for percentage of languages showing specified feature values (reference values), and absolute distance of that percentage from 50% | 238 |
| 90 | Areal means for percentage of languages showing modal feature values, and absolute distance of that percentage from 33% or 50% | 240 |
| 91 | Diversity in head/dependent marking | 242 |
| 92 | Diversity in alignment | 243 |
| 93 | Complexity and diversity of complexity by area | 244 |
| 94 | Diversity in word order | 245 |
| 95 | Three measures of the relative diversity of macroareas and sets of residual or spread zones | 248 |
| 96 | Correlations in areal frequencies | 257 |
