

Contents

Preface	vii
Introduction	ix
Notation	xi
Chapter 1. Preliminaries	1
§1. Random processes and their distributions	1
§2. Convergence of probability measures	4
§3. Measurable partitions and systems of conditional measures	9
Chapter 2. Methods for Studying Distributions of Functionals	13
§4. Stratifications of measures	13
§5. Superstructure	23
§6. Differential operators	29
Chapter 3. Gaussian Functionals	35
§7. Gaussian measures on linear spaces	35
§8. Smooth functionals	47
§9. Distributions of smooth functionals	52
§10. Convexity and the isoperimetric property of the Gaussian measure	57
§11. Convex functionals and their distributions	72
§12. Distribution of the norm	88
Chapter 4. Poisson Functionals	105
§13. The configuration space	105
§14. Differential calculus on the configuration space	111
§15. The Gauss-Ostrogradskii formula	116
§16. Smooth functionals	127
§17. Distribution of the norm of a stable vector	138
Chapter 5. Local Limit Theorems	145
§18. Strong convergence theorems	145
§19. Strong convergence of distributions of Gaussian functionals	150
§20. The local invariance principle	156
§21. The local invariance principle in the case of attraction to a stable law	161
§22. The infinite-dimensional local limit theorem	167
Bibliographical Notes	171
Bibliography	175
Index	183
