

Contents

1	Preliminaries From Calculus	1
1.1	Continuous and Differentiable Functions	1
1.2	Right and Left-Continuous Functions	2
1.3	Variation of a Function	5
1.4	Riemann Integral	10
1.5	Stieltjes Integral	11
1.6	Differentials and Integrals	15
1.7	Taylor's Formula and other results	16
2	Concepts of Probability Theory	23
2.1	Discrete Probability Model	23
2.2	Continuous Probability Model	30
2.3	Expectation and Lebesgue Integral	35
2.4	Transforms and Convergence	39
2.5	Independence and Conditioning	40
2.6	Stochastic Processes in Continuous Time	46
3	Basic Stochastic Processes	55
3.1	Brownian Motion	56
3.2	Brownian Motion as a Gaussian Process	58
3.3	Properties of Brownian Motion Paths	61
3.4	Three Martingales of Brownian Motion	63
3.5	Markov Property of Brownian Motion	65
3.6	Exit Times and Hitting Times	68
3.7	Maximum and Minimum of Brownian Motion	70
3.8	Distribution of Hitting Times	72
3.9	Reflection Principle and Joint Distributions	73
3.10	Zeros of Brownian Motion. Arcsine Law	74
3.11	Size of Increments of Brownian Motion	77
3.12	Brownian Motion in Higher Dimensions	78

3.13	Random Walk	80
3.14	Stochastic Integral in Discrete Time	81
3.15	Poisson Process	82
3.16	Exercises	85
4	Brownian Motion Calculus	87
4.1	Definition of Itô Integral	87
4.2	Itô integral process	95
4.3	Itô's Formula for Brownian motion	99
4.4	Stochastic Differentials and Itô Processes	102
4.5	Itô's formula for functions of two variables	109
4.6	Stochastic Exponential	111
4.7	Itô Processes in Higher Dimensions	112
4.8	Exercises	114
5	Stochastic Differential Equations	117
5.1	Definition of Stochastic Differential Equations	117
5.2	Strong Solutions to SDE's	120
5.3	Solutions to Linear SDE's	121
5.4	Existence and Uniqueness of Strong Solutions	125
5.5	Markov Property of Solutions	126
5.6	Weak Solutions to SDE's	128
5.7	Existence and Uniqueness of Weak Solutions	130
5.8	Backward and Forward Equations.	134
5.9	Exercises	137
6	Diffusion Processes	139
6.1	Martingales and Dynkin's formula	139
6.2	Calculation of Expectations and PDE's	143
6.3	Homogeneous Diffusions	145
6.4	Exit Times From an Interval	148
6.5	Representation of Solutions of PDE's	152
6.6	Explosion	153
6.7	Recurrence and Transience	155
6.8	Diffusion on an Interval	156
6.9	Stationary Distributions	157
6.10	Multidimensional SDE's	160
6.11	Exercises	167

7	Martingales	169
7.1	Definitions	169
7.2	Uniform Integrability	171
7.3	Martingale Convergence	173
7.4	Optional Stopping	175
7.5	Localization. Local Martingales	177
7.6	Quadratic Variation of Martingales	180
7.7	Martingale Inequalities	182
7.8	Continuous martingales	184
7.9	Change of Time in SDE's	185
7.10	Martingale Representations	187
7.11	Exercises	189
8	Calculus For Semimartingales	191
8.1	Semimartingales	191
8.2	Quadratic Variation and Covariation	192
8.3	Predictable Processes	194
8.4	Doob-Meyer Decomposition	195
8.5	Definition of Stochastic Integral	196
8.6	Properties of Stochastic Integrals	199
8.7	Itô's Formula: continuous case	200
8.8	Local Times	202
8.9	Stochastic Exponential	203
8.10	Compensators and Sharp Bracket Process	207
8.11	Itô's Formula: general case	212
8.12	Elements of the General Theory	214
8.13	Exercises	217
9	Pure Jump Processes	219
9.1	Definitions	219
9.2	Pure Jump Process Filtration	220
9.3	Itô's Formula for Processes of Finite Variation	221
9.4	Counting Processes	222
9.5	Markov Jump Processes	229
9.6	Stochastic equation for Markov Jump Processes	231
9.7	Explosions in Markov Jump Processes	233
9.8	Exercises	234
10	Change of Probability Measure	237
10.1	Change of Measure for Random Variables	237
10.2	Equivalent Probability Measures	238
10.3	Change of Measure for Processes.	240

10.4	Change of Drift in Diffusion	243
10.5	Change of Wiener Measure	244
10.6	Change of Measure for Point Processes	245
10.7	Likelihood Ratios	247
10.8	Exercises	250
11	Applications in Finance	253
11.1	Financial Derivatives and Arbitrage	253
11.2	A Finite Market Model	256
11.3	Semimartingale Market Model	260
11.4	Diffusion and Black-Scholes Model	265
11.5	Interest Rates Models	273
11.6	Options, Caps, Floors, Swaps and Swaptions	281
11.7	Exercises	283
12	Applications in Biology	289
12.1	Branching Diffusion	289
12.2	Wright-Fisher Diffusion	292
12.3	Birth-Death Processes	293
12.4	Exercises	297
13	Applications in Engineering and Physics	299
13.1	Filtering	299
13.2	Stratanovich Calculus	304
13.3	Random Oscillators	305
13.4	Exercises	313
	References	315
