

CONTENTS

Introduction to the Series	vii
Preface	viii
Introduction	1
PART I Contiguity	
<i>Chapter 1</i> The Radon-Nikodym derivative and Lebesgue decomposition	7
<i>Chapter 2</i> Contiguity and entire separation. General criteria	23
<i>Chapter 3</i> Contiguity. Predictable criteria	45
<i>Chapter 4</i> Entire separation. Predictable criteria	81
PART II The Statistical Invariance Principle	
<i>Chapter 5</i> Weak convergence of processes related to likelihood ratios. Functional asymptotic normality	93
<i>Chapter 6</i> The case of independent, identically distributed observations. Functional local asymptotic normality	135
<i>Chapter 7</i> Weak convergence of likelihood processes. Functional local asymptotic normality	141
<i>Chapter 8</i> An asymptotic expansion associated with likelihood ratios. Local asymptotic normality	153
<i>Chapter 9</i> Functional limit theorems for triangular arrays under contiguous alternatives. Convergence to a Gaussian process with independent increments	161
<i>Chapter 10</i> Functional limit theorems for triangular arrays under contiguous alternatives. Convergence to a mixture of Gaussian processes with independent increments	193

<i>Chapter 11</i>	Weak convergence of processes related to likelihood ratios. Functional asymptotic mixed normality	211
