<b>Introduction</b>	<b>1</b>
<b>Chapter 1. One-dimensional inverse problems</b>	<b>9</b>
1.1. Setting of a problem for string equation . . . . .	9
1.1.1. General remarks . . . . .	9
1.1.2. Mathematical setting of the problem . . . . .	9
1.1.3. Physical interpretation of inverse problem data . . . . .	10
1.1.4. Reformulation of the problem in terms of a hyperbolic system . . . . .	12
1.1.5. Determination of the string parameters from $\sigma(y)$ and additional information . . . . .	14
1.2. Peculiarities of solution. Formulation of the direct problem . . . . .	15
1.2.1. Correct formulation of the direct problem . . . . .	15
1.2.2. Singularities of solution of the hyperbolic system . . . . .	19
1.2.3. Singularities of solution of the string equation . . . . .	21
1.2.4. Singularities of solution in case of discontinuous coefficients . . . . .	22
1.3. The first method of solution of inverse problem . . . . .	25
1.3.1. Derivation of the system of integral equations . . . . .	25
1.3.2. Investigation of the system of integral equations . . . . .	26
1.3.3. Continuous dependence of solution on inverse problem data . . . . .	30
1.3.4. Solution of the inverse problem by successive steps . . . . .	31
1.3.5. The case of discontinuous $\sigma(y)$ . . . . .	32

1.4. Method of linear integral equations . . . . .	36
1.4.1. Fundamental system of solutions of equation (1.1.12) . . . . .	36
1.4.2. Derivation of linear integral equations . . . . .	37
1.4.3. Recovery of the coefficient $q(y)$ from a solution of the linear integral equation . . . . .	40
1.4.4. Structure of equations (1.4.10). Existence and uniqueness of solution . . . . .	41
1.4.5. Modification of equations (1.4.14), (1.4.15) under a change of the source . . . . .	43
1.4.6. Proof of necessity. Conditions for solvability of the inverse problem . . . . .	44
1.4.7. Proof of sufficiency . . . . .	46
1.5. The case of discontinuous $\sigma(y)$ . . . . .	47
1.5.1. The first method . . . . .	47
1.5.2. The second method . . . . .	48
1.6. The Gel'fand – Levitan equation for second-order hyperbolic equations . . . . .	48
1.6.1. Derivation of a linear integral equation . . . . .	48
1.6.2. Recovery of coefficients by solution of the Gel'fand – Levitan equation . . . . .	51
1.6.3. The scattering problem . . . . .	52
1.7. Some cases of explicit solution of inverse problem . . . . .	53
1.7.1. Description of inverse problem data . . . . .	53
1.7.2. Construction of the solution . . . . .	54
1.8. On connection of inverse problems with nonlinear ordinary differential equations . . . . .	57
1.8.1. Connection between ordinary differential equations and inverse problems . . . . .	57
1.8.2. Use of the connection between differential equations and inverse problems . . . . .	59
1.9. The case of more general system of equations . . . . .	63
1.9.1. Setting of a problem . . . . .	63
1.9.2. Linear integral equations . . . . .	64
1.9.3. Determination of $q_1$ and $q_2$ . . . . .	65

<b>Chapter 2. Theory of inverse problems for wave processes in layered media</b>	<b>67</b>
2.1. Inverse problems of acoustics . . . . .	67
2.1.1. General remarks . . . . .	67
2.1.2. Setting of an inverse problem for the acoustic equation . .	68
2.1.3. Solving the inverse problem of acoustics by the Fourier transformation . . . . .	69
2.1.4. Solution of the inverse problem of acoustics by the Radon transformation . . . . .	71
2.1.5. The inverse problem of scattering a plane wave . . . . .	74
2.1.6. The inverse problem of wave propagation in wave guides .	75
2.1.7. The inverse problem for a layered ball . . . . .	77
2.1.8. The method of moments. Formulation of a problem and its reduction to an integral equation . . . . .	78
2.1.9. Construction of the Green function . . . . .	80
2.1.10. Investigation of integral equation (2.1.34) . . . . .	83
2.1.11. The inversion formula for the operator $\hat{T}$ . . . . .	84
2.1.12. Once more about the scattering problem . . . . .	86
2.2. General second-order hyperbolic equation. Problem in a half-space . . . . .	89
2.2.1. Setting of a problem . . . . .	89
2.2.2. Transformation of the problem . . . . .	90
2.3. The scattering problem for the general hyperbolic equation . . . .	92
2.3.1. Setting of the problem, reformulation in terms of a system . . . . .	92
2.3.2. Reduction to an inverse problem investigated above . . . .	94
2.3.3. The maximum possible information on the coefficients of equation (2.2.1) . . . . .	96
 <b>Chapter 3. Inverse problems for vector wave processes</b>	 <b>99</b>
3.1. Inverse problem for elasticity equation . . . . .	99
3.1.1. General remarks . . . . .	99
3.1.2. Setting of the problem . . . . .	99
3.1.3. Solution of the inverse Lamb problem . . . . .	100

3.2. Inverse problem of sound propagation in a moving layered medium . . . . .	103
3.2.1. Acoustic equations in a moving medium . . . . .	103
3.2.2. Transformation of the system for the layered medium . . .	104
3.3. The case of one-dimensional sound propagation . . . . .	108
3.3.1. General description of the problems in question . . . . .	108
3.3.2. Mathematical setting of the problems . . . . .	109
3.3.3. Formulation of the results . . . . .	111
3.3.4. Integral equations for Problem 1 . . . . .	111
3.3.5. Integral equations for Problem 2 . . . . .	114
3.3.6. The model problem . . . . .	115
3.4. Inverse problems for hyperbolic systems . . . . .	117
3.4.1. General remarks. Setting of a problem . . . . .	117
3.4.2. Formulation of the direct problem . . . . .	118
3.4.3. Setting of the inverse problem. Formulation of the result .	120
3.4.4. Proof . . . . .	120
3.5. Second-order hyperbolic system . . . . .	122
3.5.1. Setting of a problem . . . . .	122
3.5.2. Proof . . . . .	123
3.5.3. The inverse problem with a fixed interval of nonhomogeneities . . . . .	130
