Preface	IX
1 Hilbert Spaces	
1.1 Definition and basic properties	1
1.2 Examples	3
1.3 Orthonormal base	5
1.4 Fourier series	6
1.5 Subspaces, orthogonal sums	8
1.6 Linear functionals	9
1.7 Weak convergence	11
1.8 Linear operators	15
1.9 Adjoint operators	16
1.10 The spectrum of an operator	17
1.11 Compact operators	18
1.12 Compact self-adjoint operators	19
1.13 Integral operators	21
1.14 The Lax-Milgram theorem	23
2 Functional Spaces	
2.1 Notation and definitions	25
2.2 Lebesgue integral	27
2.3 Level sets of functions of a real variable	29
2.4 Symmetrization	32
2.5 The space $L_1(\Omega)$	35
2.6 The space $L_2(\Omega)$	36
2.7 The space $L_p(\Omega)$, $p > 1$	38
2.8 Density of the set of continuous functions in $L_1(\Omega)$	40
2.9 Density of the set of continuous functions in $L_p(\Omega)$, $p > 1$	41
2.10 Separability of $L_p(\Omega)$	43
2.11 Global continuity of functions of $L_p(\Omega)$	44
2.12 Averaging	45
2.13 Compactness of a subset in $L_p(\Omega)$	46
2.14 Fourier transform	47

2.15	The spaces $W_p^m(\Omega)$	50
2.16	The averaging and generalized derivatives	54
2.17	Continuation of functions of $W_p^m(\Omega)$	56
2.18	The Sobolev integral representation	58
2.19	The space $W_p^1(\Omega, E)$	58
2.20	Properties of the space $W_{p,0}^m(\Omega)$	59
2.21	Sobolev's embedding theorems	60
2.22	Poincaré's inequality	61
2.23	Interpolation inequalities	68
2.24	Compactness of the embedding	70
2.25	Invariance of $W_p^m(\Omega)$ under change of variables	72
2.26	The spaces $W_p^m(\Omega)$ for a smooth domain Ω	73
2.27	The traces of functions of $W_p^1(\Omega)$	75
2.28	The space H^s	78
2.29	The traces of functions of $W_2^k(\mathbf{R}^n)$	83
2.30	The Hardy inequalities	89
2.31	The Morrey embedding theorem	105

3 Elliptic Operators

3.1	Strongly elliptic equations	109
3.2	Elliptic equations	115
3.3	Regularity of solutions	120
3.4	Boundary problems for elliptic equations	124
3.5	Smoothness of solutions up to boundary	130

4 Spectral Properties of Elliptic Operators

4.1	Variational principle	133
4.2	The spectrum of a self-adjoint operator	139
4.3	The Friedrichs extension	143
4.4	Examples of linear unbounded operators	144
4.5	Self-adjointness of the Schrödinger operator	148

5 The Sturm-Liouville Problem

5.1	Elementary properties	153
5.2	On the first eigenvalue of a Sturm-Liouville problem	170
5.3	On other estimates of the first eigenvalue	176
5.4	On a more general estimate of the first eigenvalue of the Sturm-Liouville operator	194
5.5	On estimates of all eigenvalues	202

6 Differential Operators of Any Order

6.1	Oscillation of solutions of an equation of any order	207
6.2	On estimates of the first eigenvalue for operators of higher order	213

6.3	Introduction to a Lagrange problem	217
6.4	Preliminary estimates	220
6.5	Precise results	225
7	Eigenfunctions of Elliptic Operators in Bounded Domains	
7.1	On the Dirichlet problem for strongly elliptic equations	233
7.2	Estimates of eigenfunctions of strongly elliptic operators	239
7.3	Equations of second order	242
7.4	Estimates of eigenfunctions of operator pencils	246
7.5	The method of stationary phase	248
7.6	Asymptotics of a fundamental solution of an elliptic operator with constant coefficients	253
7.7	Estimates of the eigenfunctions of an elliptic operator with constant coefficients	257
7.8	Estimates of the first eigenvalue of an elliptic operator in a multi-connected domain	265
7.9	Estimates of the first eigenvalue of the Schrödinger operator in a bounded domain	271
8	Negative Spectra of Elliptic Operators	
8.1	Introduction	275
8.2	One-dimensional case	278
8.3	Some inequalities and embedding theorems	287
8.4	Estimates of the number of points of the negative spectrum	294
8.5	Some generalizations	298
8.6	Lower estimates for the number N	303
8.7	Other results	305
8.8	On moments of negative eigenvalues of an elliptic operator	309
	Bibliography	319
	Index	327
