

# Contents

<b>1 Pseudo-differential operators</b> .....	11
0 Oscillatory integrals .....	12
1 Hypoelliptic polynomials and Newton polyhedra .....	19
2 Further properties of the weight function .....	28
3 Symbols and amplitudes .....	31
4 Pseudo-differential operators .....	37
5 Symbolic calculus .....	44
6 Anti-Wick symbols .....	50
7 Operators with parameter .....	58
8 Hypoelliptic operators .....	60
9 Sobolev spaces .....	71
10 Fredholm operators .....	76
11 Fourier integral operators .....	82
12 Fourier operators on Sobolev spaces and Cauchy problems in $\mathbf{R}^n$ .....	94
13 Local hypoellipticity and Grushin operators .....	109
14 $\mathcal{P}$ -wave front set and other applications .....	112
<b>2 Spectral theory</b> .....	115
1 Pseudo-differential operators in $L^2(\mathbf{R}^n)$ .....	116
2 The spectrum of a hypoelliptic operator .....	119
3 The Weyl formula for the counting function .....	123
4 Trace-class operators .....	135
5 Proof of the theorem on approximate spectral projections .....	153
6 Estimate of the Weyl term .....	155

---

7	Estimate of the Weyl term for ordinary differential operators with degenerate Newton polyhedron .....	175
	<b>References</b> .....	180
	<b>List of symbol classes, operator classes and related function spaces</b> ....	185
	<b>Index</b> .....	187
