Introduction 11

Notations 15

1 Fourier integral operators 16

1.1 Definition of Fourier integral operators 16
1.1.1 Oscillatory integrals 16
1.1.2 Singular support of oscillatory integrals 20
1.1.3 The Kernel Theorem 22
1.1.4 Definition of Fourier integral operators 27
1.2 The method of stationary phase 29
1.2.1 The Morse lemma 30
1.2.2 Fourier transforms of Gaussian functions 32
1.3 Background on differential and symplectic geometry 35
1.3.1 Smooth manifolds of dimension n 35
1.3.2 The tangent space 37
1.3.3 Canonical 1- and 2-forms 42
1.4 The strictly hyperbolic Cauchy problem. Construction of a parametrix 45
1.4.1 Outline of construction 45
1.4.2 Hamilton's canonical field 53
1.4.3 Construction of phase function 57
1.4.4 Solution of the transport equations 60
1.5 Fourier integral operators with inhomogeneous phase functions 63
1.5.1 Definition of Fourier integral operators with inhomogeneous phase functions 63
1.5.2 Product of the Fourier integral operators $P_{1,\phi}P_{2,\phi^*}$ 67
1.5.3 Operators with double symbols 70
1.5.4 Product of the Fourier integral operators $P_{1,\phi^*}P_{2,\phi}$ 71
1.5.5 Product of Fourier integral operator and pseudo-differential operator: $P_{1,\phi}P_2$ and Q_1Q_{2,ϕ^*} 72
1.5.6 Product of Fourier integral operator and pseudo-differential operator: $P_1P_{2,\phi}$ and $Q_{1,\phi^*}Q_2$ 74
1.5.7 Continuity in Sobolev spaces 75

1.5.8 Fundamental solution of the Cauchy problem for first-order hyperbolic operators . . . 76
1.5.9 Egorov's theorem . . . 81
1.5.10 Propagation of singularities . . . 86

2 Ordinary differential equations with turning point 89
2.1 Representation theorem for the solutions of equations with turning point 89
2.1.1 Introduction . . . 89
2.1.2 Model second-order equations with real characteristics. The invoking of confluent hypergeometric functions . . . 91
2.1.3 Expansion of implicit functions in power series . . . 108
2.1.4 Expansion of implicit functions in power series (multidimensional case)* . . . 112
2.1.5 Zones. On the zeros of the complete symbol . . . 115
2.1.6 Classes of symbols . . . 123
2.1.7 Reduction to a "first-order diagonal" system . . . 127
2.1.8 The representation formula . . . 134
2.2 The Gevrey asymptotic representation of the solutions to the equations with turning point . . . 142
2.2.1 Introduction . . . 142
2.2.2 On the zeros of the complete symbol . . . 145
2.2.3 Classes of symbols . . . 149
2.2.4 Reduction to a "first-order diagonal" system . . . 153
2.2.5 The representation formula . . . 157
2.3 WKB solutions of the equations with infinite order turning point . . . 161
2.3.1 Introduction . . . 162
2.3.2 On the zeros of the complete symbol . . . 166
2.3.3 Classes of symbols . . . 169
2.3.4 Reduction to a "first-order diagonal" system in the exterior zone 171
2.3.5 Construction of exact solutions in the exterior zone . . . 173
2.3.6 Construction in the "inner" zone . . . 176
2.4 Applications . . . 179
2.4.1 The Cauchy problem. Propagation of singularities . . . 179
2.4.2 The Cauchy problem in Gevrey classes . . . 187
2.4.3 Tunneling phenomena . . . 193
2.4.4 Problems of hypoellipticity and local solvability . . . 197

3 Fundamental solution of the Cauchy problem for operators with multiple characteristics. Degeneration with respect to time 214
3.1 Introduction . . . 214
3.2 Hyperbolicity . . . 217
3.2.1 Hadamard's and Gårding's definitions of hyperbolic operators with constant coefficients . . . 217
3.2.2 Petrovskij's definition of hyperbolic operators . . . 219

3.2.3 Zones. On the zeros of the complete symbol. Hyperbolicity condition . . . 219
3.3 Classes of symbols . . . 225
3.4 Reduction to a Cauchy problem for a first-ordersystem . . . 233
3.5 Diagonalization in the hyperbolic zone . . . 237
3.6 Hamiltonian vector fields . . . 240
3.7 The construction of phase functions . . . 245
3.8 The fundamental solution of the Cauchy problem for elementary operators 247
3.8.1 Construction of the fundamental solution . . . 247
3.8.2 Egorov's theorem . . . 253
3.8.3 Ideals of the Fourier integral operators with phase functions generated by $\lambda(t,x,\xi)$ . . . 256
3.9 Exponential functions of certain pseudo-differential operators . . . 258
3.10 Completion of the construction of the fundamental solution . . . 264
3.11 Well-posedness of the Cauchy problem . . . 270
3.11.1 On equations with fast oscillating coefficients . . . 273
3.11.2 The energy method for weakly hyperbolic equations . . . 276

4 Fundamental solution of the Cauchy problem for hyperbolic operators with multiple characteristics. Degeneration with respect to the spatial variables 283
4.1 Introduction . . . 283
4.2 Hyperbolicity . . . 287
4.3 Classes of symbols . . . 291
4.4 Reduction to a first-order system . . . 299
4.5 Diagonalization in the hyperbolic zone . . . 301
4.6 Hamiltonian vector fields. Construction of the phase function . . . 305
4.7 Fundamental solution of the Cauchy problem for an elementary operator 308
4.8 Ideals of Fourier integral operators with phase functions generated by $\lambda(t,x,\xi)$ . . . 311
4.9 Completion of the construction of the fundamental solution . . . 315
4.10 Well-posedness of the Cauchy problem . . . 317
4.11 Other constructions - a brief survey . . . 323

5 Necessary correctness conditions for the Cauchy problem for operators with multiple characteristics 326
5.1 Introduction . . . 326
5.2 Hadamard's example in the light of the Lyapunov stability theory of ordinary differential equations . . . 333
5.3 A priori estimates which follow from the well-posedness of the Cauchy problem . . . 336
5.4 Proof of Theorem 5.1.3 . . . 338
5.4.1 Partial hyperbolicity . . . 338
5.4.2 Construction of an unstable solution: the case $s = 0$ . . . 343

5.4.3 Gårding's asymptotic inequality 347
5.4.4 The Lyapunov function of third kind. The lower bound for the energy of the unstable solution 349
5.4.5 Completion of the proof ($s = T$) 353
5.5 Proof of Theorem 5.1.4 355
5.6 Proof of Theorem 5.1.5 362
5.6.1 Reduction to an almost diagonal system 362
5.6.2 The construction of the asymptotic solution 366
5.6.3 Gårding's asymptotic inequality 369
5.6.4 Lower bound for the energy of the asymptotic solution. Completion of the proof 371
5.7 Necessary conditions obtained by other approaches 374
5.8 Examples 375
