

Table of Contents

Preface		ix
Notations		xiii
1 G-convergence of Abstract Operators		1
1.1 Preliminaries		1
1.1.1 Multivalued Monotone Operators		1
1.1.2 Single-Valued Operators of Monotone Type		5
1.1.3 Convergence in the Sense of Kuratowski		8
1.2 G -convergence of Monotone Operators		10
1.2.1 Classes of Operators		10
1.2.2 G -convergence and G -compactness		14
1.2.3 Comparison of Different Types of Operator Convergence		18
1.2.4 Some Special Properties of G -convergence		24
1.3 G -convergence of Abstract Parabolic Operators		25
1.3.1 Abstract Parabolic Operators		25
1.3.2 G -compactness		33
1.3.3 Properties of G -convergence		36
1.3.4 Time Homogenization of Abstract Parabolic Operators		41
Comments		44
2 Strong G-convergence of Nonlinear Elliptic Operators		45
2.1 Nonlinear Elliptic Operators		45
2.1.1 Measurable Multivalued Functions		45
2.1.2 Multivalued Monotone Elliptic Operators		49
2.1.3 Some Classes of Single-Valued Elliptic Operators		58
2.2 Strong G -convergence for Multivalued Elliptic Operators		62
2.2.1 Definition of Strong G -convergence		62
2.2.2 Strong G -compactness		65
2.2.3 Additional Results		68
2.2.4 Variational Problems		76
2.2.5 Other Boundary Conditions		80
2.3 Strong G -convergence for Single-Valued Elliptic Operators		83

2.3.1	Main Results	83
2.3.2	Proofs of Main Results: Particular Case	88
2.3.3	Proofs of Main Results: General Case	98
2.4	Further Results on Strong G -convergence	108
2.4.1	Criteria for Strong G -convergence	108
2.4.2	Stability and Comparison Results	112
2.4.3	One-Dimensional Case	118
2.5	Strong Nonlinearity in Lower Order Term	120
	Comments	129
3	Homogenization of Elliptic Operators	131
3.1	Random Homogeneous Fields	131
3.1.1	Definitions and Main Properties	131
3.1.2	Vector Fields and Compensated Compactness	136
3.1.3	Random Vector Fields	137
3.2	Homogenization of Random Elliptic Operators	141
3.2.1	Multivalued Monotone Operators and Auxiliary Problem	141
3.2.2	Homogenization Theorem	146
3.2.3	Properties of Homogenized Operators	149
3.2.4	Single-Valued Elliptic Operators	152
3.3	Almost Periodic Homogenization	155
3.3.1	Almost Periodic Functions	155
3.3.2	Individual Homogenization	159
3.4	One-Dimensional Problems	163
3.5	Additional Results	166
3.5.1	Operators with Strong Nonlinearity	166
3.5.2	Correctors	170
	Comments	172
4	Nonlinear Parabolic Operators	173
4.1	Strong G -convergence	173
4.1.1	Main Definitions	173
4.1.2	Monotone Operators	177
4.1.3	General Parabolic Operators	183
4.1.4	Further Results	187
4.2	Homogenization	189
4.2.1	Setting of the Problem	189
4.2.2	Self-Similar Case	192
4.2.3	Non Self-Similar Cases	195
4.2.4	Spatial Homogenization	199
4.2.5	Time Homogenization	200
4.3	An Equation of Nonstationary Filtration	203

Comments	212
A Homogenization of Nonlinear Difference Schemes	213
A.1 Mesh Functions	214
A.2 G-convergence	216
A.3 Homogenization	220
B Open Problems	224
References	229
Index	248
