<b>Capacity and Spectral Theory</b>	<b>12</b>
<i>M. Demuth, I. McGillivray, and A. Noll</i>	
1	Introduction . . . . . 12
2	Capacity and regular Dirichlet forms, possible generalizations . . . . . 13
2.1	General theory . . . . . 13
	Definitions . . . . . 13
	Regular Dirichlet form with measure perturbations . . . . . 16
	Stochastic representation of the equilibrium potential . . . . . 19
2.2	Generalizations . . . . . 22
	The capacity of a non-regular, non-symmetric Dirichlet form . . . . . 23
	Capacities on $\mathbb{R}^d$ . . . . . 25
	The capacity of a subspace . . . . . 26
3	Capacity and Dirichlet spaces . . . . . 28
4	Capacity and eigenvalues of self-adjoint operators . . . . . 32
4.1	Ground-state shift for sets of finite capacity . . . . . 33
4.2	The ground-state shift in the abstract Hilbert space setting . . . . . 39
4.3	Asymptotics of the Dirichlet-perturbed ground-state . . . . . 41
5	Capacity, differences of semigroups, scattering theory . . . . . 46
5.1	The integral trace of an integral operator . . . . . 46
5.2	Complete scattering systems . . . . . 52
5.3	Scattering phases and capacity . . . . . 58
6	Appendix . . . . . 63
6.1	Markov processes associated to Dirichlet forms . . . . . 63
6.2	Basics on regular Dirichlet forms . . . . . 67
	References . . . . . 72

<b>Some Results on the Scattering of Weakly Interacting Solitons for Non-linear Schrödinger Equations</b>		<b>78</b>
<i>G. Perelman</i>		
	Introduction . . . . .	78
1	Asymptotic behavior of solutions of nonlinear equation . . . . .	82
1.1	Preliminary facts and formulation of the result . . . . .	82
	1.1.1. Solitons . . . . .	82
	1.1.2. Linearization on the solitons . . . . .	83
	1.1.3. Description of the problem . . . . .	84
1.2	Separation of the motion . . . . .	85
	1.2.1. Orthogonality conditions. . . . .	85
	1.2.2. Differential equations for the components of the decomposition. . . . .	86
1.3	Preliminary estimates . . . . .	88
	1.3.1. Nonlinear equation. . . . .	88
	1.3.2. Estimates of linear evolution . . . . .	89
1.4	Estimates of the majorants . . . . .	90
	1.4.1. Estimates of the solitons parameters. . . . .	90
	1.4.2. Estimates of $\vec{D}$ . . . . .	91
	1.4.3. Estimates of the dispersive part of $\chi$ . . . . .	94
	1.4.4. Closing of the estimates . . . . .	96
1.5	Scattering . . . . .	98
1.6	Cauchy problem with initial conditions at $t = -\infty$ . . . . .	99
2	Properties of the linearized equation . . . . .	103
2.1	One soliton linearization. . . . .	104
	2.1.1. Spectral properties of the operator $L$ . . . . .	104
	2.1.2. Linear one soliton evolution . . . . .	111
2.2	Solutions of two-soliton linearization with the standard behavior as $t \rightarrow +\infty$ . . . . .	113
	2.2.1. The solutions $\zeta_{jl}$ of the discrete spectrum . . . . .	114
	2.2.2. Dispersive solutions . . . . .	115
2.3	Asymptotic completeness for the two-soliton linearization . . . . .	118
	2.3.1. The operator $K^{-1}(\mathbf{0})$ . . . . .	118
	2.3.2. Proof of proposition 2.3.1 . . . . .	126
2.4	Estimates of two-soliton evolution . . . . .	132
	References . . . . .	135
<b>Weakly Smooth Nonselfadjoint Spectral Elliptic Boundary Problems</b>		<b>138</b>
<i>M. Agranovich, R. Denk, and M. Fairman</i>		
1	Introduction . . . . .	138
2	Basic theorem and smoothness assumptions . . . . .	146
3	Simplest spectral consequences . . . . .	153
4	Asymptotics of powers of the resolvent . . . . .	156

5	Asymptotics of powers of the resolvent for weakly smooth problems . . .	165
6	Rough and precise asymptotics of eigenvalues . . . . .	172
7	Boundary problems with transmission conditions . . . . .	179
8	Boundary problems with indefinite weight . . . . .	180
9	Some generalizations . . . . .	186
	Appendix . . . . .	186
	References . . . . .	196

**Integral Operators with Singular Canonical Relations 200**

<i>A. Comech</i>		
1	Oscillatory integral operators with singularities . . . . .	200
1.1	Introduction . . . . .	200
1.2	Relation with Fourier integral operators . . . . .	208
1.3	Pseudoconvexity . . . . .	212
1.4	Geometry of the canonical relation . . . . .	215
1.5	Cotlar-Stein Almost Orthogonality . . . . .	223
1.6	Operators with one-sided Whitney fold . . . . .	224
2	Radon transform of Melrose-Taylor . . . . .	230
2.1	Background from scattering theory . . . . .	230
2.2	Regularity properties of $\mathcal{R}_{MT}$ . . . . .	234
2.3	Associated canonical relation . . . . .	236
2.4	Isolated precise points . . . . .	239
2.5	Proof for the general case . . . . .	242
2.6	Regularity properties of the operator $\tilde{F}$ . . . . .	247
	References . . . . .	247

**Pseudo-Differential Calculus in the Fourier-Edge Approach on Non-Compact Manifolds 249**

<i>Ch. Dorschfeldt, U. Grieme, and B.-W. Schulze</i>		
	Introduction . . . . .	249
1	The global Fourier-edge pseudo-differential operators . . . . .	251
1.1	Weighted operators and abstract wedge Sobolev spaces . . . . .	251
1.2	The case of Hilbert spaces . . . . .	260
1.3	The case of Banach spaces . . . . .	270
1.4	Ellipticity and parametrices . . . . .	274
2	Operators on manifolds with conical exits . . . . .	277
2.1	Invariance under diffeomorphisms . . . . .	277
2.2	Pseudo-differential operators on manifolds with conical exits . . . . .	282
3	Examples and Remarks . . . . .	287
3.1	Operator-valued symbols for boundary value problems . . . . .	287
3.2	Edge pseudo-differential operators . . . . .	292
	References . . . . .	297

<b>Operator Algebras Associated with Resurgent Transforms and Differential Equations on Manifolds with Singularities</b>	<b>300</b>
<i>B.-W. Schulze, B. Sternin, and V. Shatalov</i>	
Introduction . . . . .	300
1 General theory . . . . .	301
1.1 Preliminaries . . . . .	301
1.2 Function spaces . . . . .	303
Resurgent representations . . . . .	303
Function space scales . . . . .	306
1.3 Spaces with asymptotics . . . . .	307
Preliminary considerations . . . . .	307
Main definitions . . . . .	308
Elements with simple singularities . . . . .	311
1.4 Operator algebras . . . . .	312
Description of generators . . . . .	312
Functions of generators . . . . .	313
Construction of the operator algebras . . . . .	315
Ellipticity and regularizers . . . . .	317
2 Applications: Differential equations on manifolds with cuspidal points	319
2.1 Finiteness theorem . . . . .	319
Statement of the problem . . . . .	320
Construction of local regularizers . . . . .	322
The global regularizer and the Fredholm property . . . . .	323
2.2 Deformation of resurgent transforms . . . . .	324
Definition of the deformation . . . . .	324
Deformation of the operators and the index theorem . . . . .	327
2.3 Equations in spaces with asymptotics . . . . .	329
Statement of the problem . . . . .	329
Notes on the methods . . . . .	330
References . . . . .	331
<b>Nonstationary Problems for Borel-Fuchs Type Equations</b>	<b>334</b>
<i>B.-W. Schulze, B. Sternin, and V. Shatalov</i>	
Introduction . . . . .	334
1 Solution of the problem “in small” . . . . .	336
1.1 Degeneration of first degree . . . . .	337
1.2 Degeneration of higher degree . . . . .	342
2 Solution of the problem “in large” . . . . .	348
2.1 Degeneration of first degree . . . . .	349
2.2 Degeneration of higher degree . . . . .	353
3 Investigation of nonstationary problems in abstract algebras . . . . .	355
3.1 General theory . . . . .	355
3.2 Example . . . . .	361
