0.8 What is in the Book? Chapter 12	14
0.9 How LSSA are Applied to Classical Asymptotics	15
0.10 Paths	17

Part I. Semiclassical Microlocal Analysis

1. Introduction to Semiclassical Microlocal Analysis	21
1.1 h -Pseudo-Differential Operators	21
1.1.1 Quantization, symbols and pseudo-differential operators	21
1.1.2 Estimates	23
1.1.3 Symbol classes	27
1.1.4 Parametrices	28
1.1.5 Alternative symbol classes	29
1.1.6 Classes of pseudo-differential operators	31
1.2 Lagrangian Distributions and Fourier Integral Operators	31
1.2.1 Lagrangian distributions and manifolds	31
1.2.2 Fourier integral operators	36
1.2.3 Metaplectic operators	40
1.2.4 Jets	42
1.3 Oscillation Front Sets and Related Topics	43
1.3.1 Principal definitions	43
1.3.2 Properties	45
1.4 Functional Calculus of h -Pseudo-Differential Operators	47
1.4.1 Analytic theory	48
1.4.2 Self-adjoint theory	50
1.4.3 Subprincipal symbols	51
1.4.4 Functional calculus for other classes of PDO	51
Comments	52

2. Propagation of Singularities in the Interior of a Domain	53
2.1 General Theory	53
2.1.1 Principal theorem	53
2.1.2 Cauchy problem. I	57
2.1.3 Cauchy problem. II	58
2.1.4 Properties of fundamental solutions	60
2.1.5 Overdetermined systems	62
2.2 Geometric Interpretation	63
2.2.1 Discussion of the microhyperbolicity condition	63
2.2.2 Principal theorem	66
2.3 Propagation of Singularities along Long Bicharacteristics	69
2.3.1 Evolution of operators	69
2.3.2 Propagation of singularities	74
Comments	78
3. Propagation of Singularities near the Boundary	79
3.1 General Theory	79
3.1.1 Statement of the basic theorem. I	79
3.1.2 Reduction to a special case	83
3.1.3 Elliptic theory	87
3.1.4 Statement of the basic theorem. II	90
3.1.5 Proof of theorem 3.1.10	91
3.1.6 Auxiliary estimates	95
3.1.7 Proof of proposition 3.1.4	97
3.2 Related Results	98
3.2.1 Finite speed of propagation	98
3.2.2 Decomposition of the fundamental solution	101
3.2.3 Normal singularity property	102
3.2.4 Propagation of singularities along transversal bicharacteristics	106
3.2.5 Geometric interpretation	107
3.3 Propagation of Singularities along Long Bicharacteristics	109
3.3.1 Statement of the basic theorem	109
3.3.2 Proof of the basic theorem	111
3.3.3 Propagation of singularities	115
Comments	116
Appendix A. On Solutions to Linear Matrix Equations	117

Part II. Local and Microlocal Semiclassical Asymptotics

4. LSSA in the Interior of a Domain	121
4.1 Preliminary Analysis	122
4.1.1 General estimates	122
4.1.2 Semiclassical spectral gaps. I	124
4.1.3 Semiclassical spectral gaps. II	130
4.1.4 Estimates in the Hilbert scale	133
4.2 The Method of Successive Approximations	134
4.2.1 The method of successive approximations in the standard case	134
4.2.2 The framing procedure	137
4.2.3 Calculations	140
4.2.4 Increasing T	142
Appendix B. On the Traces of Almost Analytic Functions	144

4.3	General Basic Theorems	146
4.3.1	General theory: $T \asymp h^{\frac{1}{2}-\delta}$	147
4.3.2	General microhyperbolic theory: $T \asymp 1$	149
4.3.3	Asymptotics with enhanced remainder estimates: $T \gg 1$	153
4.3.4	Formulas for coefficients	156
4.4	Spectral Asymptotics for Scalar Operators	156
4.4.1	From the condition “no critical point” to “rank Hess $a \geq 2$ at critical points.” I	157
4.4.2	From the condition “no critical point” to “rank Hess $a \geq 2$ at critical points.” II	161
4.4.3	From the condition “rank Hess $a \geq 2$ ” to “rank Hess $a \geq 1$ ” at critical points	166
4.4.4	From the condition “rank Hess $a \geq 1$ at critical points” to a weak non-degeneracy condition	169
4.4.5	From microlocal to local spectral asymptotics	172
4.5	Schrödinger and Dirac Operators	172
4.5.1	The Schrödinger operator	173
4.5.2	The Dirac operator: calculations	176
4.5.3	The Dirac operator: asymptotics for $m \geq c_0$	178
4.5.4	The Dirac operator: asymptotics for $m \leq c_0$	181
Appendix C. On Dirac Matrices		185
4.6	Families of Commuting Operators	188
4.6.1	Introduction	188
4.6.2	Successive approximations	189
4.6.3	The microhyperbolicity condition	190
4.6.4	Principal results (general case)	191
4.6.5	Principal results (scalar case)	193
4.7	Operators with Periodic Hamiltonian Flow	194
4.7.1	Introduction	194
4.7.2	Generalization	196
4.7.3	Propagation of singularities	198
4.7.4	Spectral trace on a larger interval	202
4.7.5	The case of degenerate symbols B	206
4.7.6	Corollaries	208
4.7.7	Some remarks	209
4.7.8	Operators with completely periodic evolution	209
4.7.9	Operators with global decomposition	211
4.7.10	General operators	213
4.8	Mollification with Respect to Non-Spectral Parameters	214
4.8.1	Linear dependence	214
4.8.2	Microhyperbolic case	215
4.8.3	Riesz means	217
5.	Standard LSSA near the Boundary	219
5.1	Preliminary Analysis	219
5.1.1	The general case	219
5.1.2	The elliptic case	222
5.1.3	Operators with minimal smoothness conditions	227
5.1.4	Estimates for the Schrödinger operator	230
5.2	The Method of Successive Approximations	233
5.2.1	Approximating the free space term	233

5.2.2	Approximations for the reflected wave	236
5.2.3	Calculations	240
5.2.4	Calculations (end)	246
5.2.5	The microhyperbolicity condition	248
5.3	Basic Theorems	251
5.3.1	Asymptotics with mollification	251
5.3.2	Asymptotics under the microhyperbolicity condition	252
5.3.3	Asymptotics in the elliptic zone	254
5.3.4	Local asymptotics	256
5.4	The Schrödinger Operator	257
5.4.1	Application of general results	257
5.4.2	General estimates without the microhyperbolicity condition	259
5.4.3	Estimates in the elliptic zone	266
	Appendix D. On Sets Associated with the Microhyperbolicity Condition	269
	Comments	273
6.	Schrödinger Operators with Strong Magnetic Field	275
6.1	Preliminary Analysis	276
6.1.1	The model operator	276
6.1.2	Rough estimates	279
6.2	Microlocal Canonical Form	284
6.2.1	Symplectic canonical form. I	284
6.2.2	Symplectic canonical form. II	290
6.2.3	Final reduction	294
6.2.4	Reduced problems	297
6.3	The Case of a Weak Magnetic Field	297
6.3.1	Analysis of singularities	298
6.3.2	Refined estimates	301
6.3.3	Calculations	304
6.3.4	Improved remainder estimates	306
6.3.5	Miscellaneous modifications of \mathcal{R}_1	310
6.4	The Case of a Strong Magnetic Field	312
6.4.1	Decomposition of the fundamental solution and propagation of singularities	312
6.4.2	Calculations	315
6.4.3	Estimates in the zone $\{\gamma \geq \tilde{\gamma}\}$	317
6.4.4	Estimates in the zone $\{\gamma \leq \tilde{\gamma}\}$	321
6.4.5	Effective asymptotics. I	323
6.4.6	Effective asymptotics. II	328
6.4.7	Effective asymptotics. III	330
6.5	Propagation of Singularities and Improved Asymptotics	334
6.5.1	Improved reduction ($d = 3$)	334
6.5.2	The case of a weak magnetic field ($d = 3$)	336
6.5.3	The case of a strong magnetic field ($d = 3$)	341
6.5.4	Propagation of singularities ($d = 2$)	344
6.5.5	Improved spectral asymptotics ($d = 2$)	345
6.6	Semiclassical Spectral Lacunas	346
6.6.1	Existence of spectral gaps	346
6.6.2	Calculations in spectral gaps	348
6.6.3	Remarks	350
6.7	Certain Generalizations	351
6.7.1	Getting rid of the condition " $\nu \leq -\epsilon$ "	351

6.7.2	Getting rid of the condition " $F \geq \epsilon$ "	355
6.7.3	Getting rid of the condition " $B(0,1) \subset X$ "	358
Appendix E. On Two Integral Formulas		361
Appendix F. Trajectories of the Classical Particles		362
F.1.	$V = 0, \mathbf{F} = \text{const}$	362
F.2.	$\nabla V = 0, \mathbf{F} = \text{const}$	362
F.3.	$V = \frac{1}{4}k^2 x ^2, \mathbf{F} = \text{const}$	363
F.4.	$V = \frac{1}{4}k^2x_3^2, \mathbf{F} = \text{const}$	363
F.5.	Linear F	363
F.6.	Movement in the Half-Plane. I	364
F.7.	Movement in the Half-Plane. II	364
Comments		364
7.	Dirac Operators with Strong Magnetic Field	367
7.1	Preliminary Analysis	367
7.1.1	The model operator	367
7.1.2	Rough estimates	370
7.2	Microlocal Canonical Form	371
7.2.1	Principal symbol reduction	371
7.2.2	Final reduction	374
7.2.3	Reduced propagators	377
7.3	The Case of a Weak Magnetic Field	377
7.3.1	Analysis of singularities. I	378
7.3.2	Analysis of singularities. II	379
7.3.3	Calculations	383
7.3.4	Estimates	385
7.4	The Case of a Strong Magnetic Field	387
7.4.1	Separation of variables and decomposition	387
7.4.2	Further reduction	390
7.4.3	Estimates	394
7.4.4	Calculations	395
7.4.5	Spectral asymptotics	396
7.4.6	Effective asymptotics. I	397
7.4.7	Effective asymptotics. II	398
7.4.8	Effective asymptotics. III	399
7.5	The Case of a Very Strong Magnetic Field	402
7.5.1	Additional reduction	403
7.5.2	Estimates: $d = 3$	405
7.5.3	Estimates: $d = 2$	406
7.5.4	The case $d = 2$ and very large h	407
7.6	Propagation of Singularities and Improved Asymptotics	408
7.6.1	Reduction	408
7.6.2	The case of a weak magnetic field	409
7.6.3	The case of a strong magnetic field	410
7.6.4	Propagation of singularities ($d = 2$)	410
7.7	Semiclassical Spectral Lacunas	410
7.7.1	Existence of spectral gaps	410
7.7.2	Calculations in the spectral gaps	414
7.7.3	The main theorem	415
7.8	Certain Generalizations	417
7.8.1	Getting rid of the condition " $v_* \leq -\epsilon_0$ "	417
7.8.2	Getting rid of the condition " $F \geq \epsilon_0$ "	418
Comments		419

Part III. Estimates of the Spectrum

8. Estimates of the Negative Spectrum	423
8.1 Statement of the Basic Theorems	423
8.1.1 General operators	424
8.1.2 Improved remainder estimates	430
8.1.3 The Schrödinger operator with strong magnetic field	432
8.2 Proof of the Basic Theorems	435
8.3 Riesz Means Estimates	439
8.3.1 General operators	440
8.3.2 Improved remainder estimates	441
8.3.3 The Schrödinger operator with strong magnetic field	442
8.4 Estimates for Quadratic Forms	442
Appendix G. Variational Estimates	446
G.1. Rozenblioum estimates	446
G.2. Riesz means estimates	449
Comments	450
9. Estimates of the Spectrum in an Interval	451
9.1 Statement of the Basic Theorems	451
9.1.1 Preliminary remarks	451
9.1.2 The Birman-Schwinger principle	453
9.1.3 Basic theorems (general operators)	459
9.1.4 Basic theorems (Dirac operator)	460
9.2 Proof of Theorems 9.1.2, 9.1.3	463
9.2.1 Self-adjointness of the Dirac operator	463
9.2.2 Abstract theory	466
9.2.3 Proof of theorem 9.1.3	470
9.2.4 Proof of theorems 9.1.4, 9.1.5 (beginning)	470
9.2.5 Proof of theorems 9.1.4, 9.1.5 (construction of J_k)	472
9.2.6 Proof of theorems 9.1.4, 9.1.5 (end)	476
Comments	478

Part IV. Asymptotics of Spectra

10. Weylian Asymptotics of Spectra	481
10.1 Semiclassical Eigenvalue Asymptotics	481
10.1.1 Semibounded operators	481
10.1.2 Non-semibounded operators	493
10.2 Large Eigenvalues for Weakly Singular Potentials	494
10.2.1 Getting started	494
10.2.2 Examples	501
10.2.3 The strong non-periodicity condition. I	506
10.2.4 The strong non-periodicity condition. II	514
10.2.5 The periodicity condition	514
10.2.6 Periodic singular case	520
10.2.7 The indefinite case	520
10.2.8 Conditions on lower order terms	521
10.3 Large Eigenvalues for Strongly Singular Potentials	523
10.3.1 Getting started	523

10.3.2	Improved remainder estimates	526
10.3.3	Examples	526
10.3.4	Indefinite perturbations	529
10.3.5	Operators with indefinite principal symbols	530
10.4	Large Eigenvalues for Unbounded Domains	530
10.4.1	Standard results	530
10.4.2	Strongly non-periodic Hamiltonian flow	533
10.4.3	Periodic Hamiltonian flow	534
10.4.4	Singularities and degenerations	537
10.4.5	Quasi-homogeneous potentials	540
10.4.6	Quickly growing potentials	541
10.4.7	Slowly growing potentials	542
10.4.8	Non-Dirichlet boundary conditions	543
10.5	Asymptotics of Eigenvalues Tending to -0	544
10.5.1	Standard results	544
10.5.2	Strongly non-periodic Hamiltonian flow	546
10.5.3	Periodic Hamiltonian flow	547
10.5.4	Singularities	548
10.5.5	Non-homogeneous operators	549
10.5.6	Quickly decreasing potentials	550
10.5.7	Slowly decreasing potentials	551
10.5.8	General boundary conditions	552
10.5.9	Non-semibounded operators	552
10.6	Multiparametrical Asymptotics	556
10.6.1	Semiclassical asymptotics with a vector semiclassical parameter	556
10.6.2	Asymptotics of eigenvalues tending to $+\infty$	557
10.6.3	Asymptotics of eigenvalues tending to -0 and related asymptotics	560
10.6.4	Asymptotics of eigenvalues near $+0$	562
10.6.5	Asymptotics of eigenvalues near $-\infty$	564
	Appendix H. Negative Order Operators	566
11.	Schrödinger, Dirac Operators with Strong Magnetic Field	569
11.1	The Case $d = 2$ with Fixed Spectral Parameter	569
11.1.1	Getting started	569
11.1.2	Some improvements	574
11.1.3	Quickly growing μ	576
11.1.4	The case $\mu \rightarrow 0$	577
11.1.5	Asymptotics for the Dirac operator	579
11.1.6	The case $\mu h \rightarrow \infty$	582
11.1.7	The case $h \rightarrow +0$, $\mu = O(1)$	583
	Appendix I. On the Self-Adjointness of the Dirac Operator	583
11.2	The Case $d = 3$ with Fixed Spectral Parameter	584
11.2.1	Getting started	585
11.2.2	The case $\mu h \rightarrow \infty$	588
11.2.3	The case $\mu = O(1)$	588
11.2.4	Some remarks	589
11.2.5	The Dirac operator	590
11.3	Spectral Asymptotics for the Schrödinger Operator ($d = 2$)	590
11.3.1	Asymptotics Weylian in principal	590
11.3.2	Asymptotics non-Weylian in principal	597
11.3.3	Operators with stabilization at infinity	598
11.3.4	Singular case	603

11.4 Spectral Asymptotics for the Dirac Operator ($d = 2$)	604
11.4.1 Eigenvalues tending to $\pm M$. I	604
11.4.2 Eigenvalues tending to $\pm M$. II	605
11.4.3 Eigenvalues tending to other points of the essential spectrum	607
11.4.4 Eigenvalues tending to infinity. I	608
11.4.5 Multiparametrical asymptotics	609
11.4.6 Eigenvalues tending to infinity. II	610
11.5 Spectral Asymptotics in the case $d = 3$	612
11.5.1 The Schrödinger operator in a bounded domain	612
11.5.2 The Schrödinger operator in an unbounded domain	614
11.5.3 Asymptotics non-Weylian in principal	618
11.5.4 Very strong magnetic field	619
11.5.5 The Dirac operator	622
Appendix J. Examples of Vector Potentials	623
Comments	625
12. Miscellaneous Asymptotics	627
12.1 Operators in Domains with Thick Cusps	628
12.1.1 Introduction	628
12.1.2 Precise asymptotics	629
12.1.3 Effective asymptotics. I	634
12.1.4 Effective asymptotics. II	641
12.1.5 Effective asymptotics. III	642
12.2 Potentials Degenerate at Infinity	643
12.2.1 Introduction	643
12.2.2 Accurate asymptotics	646
12.2.3 Effective asymptotics	648
12.3 Maximally Hypoelliptic Operators	651
12.3.1 Maximally hypoelliptic operators	651
12.3.2 Getting started	653
12.3.3 Weylian asymptotics	654
12.3.4 Accurate asymptotics	656
12.3.5 Operators with negative principal symbols	665
12.3.6 Coefficients in spectral asymptotics	667
12.4 Riesz Means for Operators with Singularities	668
12.4.1 Introduction	668
12.4.2 The Scott correction term	670
12.4.3 The first attempt	671
12.4.4 Adjustment for $\vartheta < 1$	675
12.4.5 The general case	676
12.4.6 Propagation of singularities	680
12.4.7 Improved remainder estimates	685
12.4.8 Final remarks	687
12.5 Strong Magnetic Field and Singularities	688
12.5.1 The regular case	689
12.5.2 The singular case. I	689
12.5.3 The singular case. II	692
12.5.4 The case $d = 2$	693
12.6 Schrödinger, Dirac Operators with Magnetic Field in \mathbb{R}^3	693
12.6.1 Introduction	694
12.6.2 The main theorem	695
12.6.3 Proof of proposition 12.6.2	698

12.6.4 Proof of the main theorem. I	700
12.6.5 Proof of the main theorem. II	702
12.6.6 Proof of the main theorem. III	705
12.6.7 Generalizations. I	705
12.6.8 Generalizations. II	706
Comments	707
