Preface	V
Conventions	VIII
Prerequisites	IX
§1. Measure Spaces	1
Example 1.1. Separable, not σ -finite	2
Example 1.2. Finite, not separable	3
§2. Kernels	4
§3. Domains	8
Example 3.1. Domain 0	9
Example 3.2. Hilbert transform	10
Problem 3.3. Closed domain	11
Example 3.4. Dense domain	11
Example 3.5. Dense domain	11
Example 3.6. Non-closed kernel	12
Example 3.7. Non-closed kernel	12
Theorem 3.8. Carleman kernels	13
Lemma 3.9. Dominated subsequences	13
Theorem 3.10. Full domain	14
Example 3.11. Everywhere defined kernels	15
Problem 3.12. Closed domains and kernels	16
§4. Boundedness	17
Lemma 4.1. Square integrable kernels	17
Example 4.2. Dyads	18
Lemma 4.3. Rank 1	18
Corollary 4.4. Finite rank	19
Theorem 4.5. Hilbert-Schmidt operators	19
Corollary 4.6. Compactness	19
Corollary 4.7. Singular values	20
§5. Examples	21
Example 5.1. Inflated identity	21
Theorem 5.2. Schur test	22
Example 5.3. Abel kernel	22
Example 5.4. Cesàro kernel	23
Example 5.5. Hilbert-Hankel matrix	23

Theorem 5.6. Toeplitz matrices	24
Example 5.7. Hilbert-Toeplitz matrix	25
Example 5.8. Discrete Fourier transform	25
§ 6. Isomorphisms	27
Theorem 6.1. Induced unitary operators	28
Theorem 6.2. Transforms of kernels	28
Corollary 6.3. Unitary equivalence	29
Corollary 6.4. Preservation of structure	29
Example 6.5. Projection on $L^2(\mathbb{I})$	30
Example 6.6. Atomic spaces versus \mathbb{Z}	31
§ 7. Algebra	32
Problem 7.1. Multipliability	32
Example 7.2. Compact Fourier transform	33
Theorem 7.3. Operators on atomic spaces	35
Lemma 7.4. Integrable approximation	36
Theorem 7.5. Conjugate transposes	37
Corollary 7.6. Atomic domain	38
Corollary 7.7. Matrices	38
§ 8. Uniqueness	39
Theorem 8.1. Uniqueness	39
Problem 8.2. Determination	39
Example 8.3. Non-measurable kernel	40
Problem 8.4. Measurability	40
Theorem 8.5. Identity operator	41
Theorem 8.6. Multiplication operators	41
§ 9. Tensors	43
Theorem 9.1. Direct sums	43
Corollary 9.2. Carleman kernels	44
Theorem 9.3. Tensor products	45
Problem 9.4. Bounded kernels	46
Theorem 9.5. Tensor multiplicativity of Int	46
Theorem 9.6. Tensors with dyads	46
Example 9.7. Isometry on $L^2(\mathbb{I})$	47
Example 9.8. Inflations as tensor products	48
Theorem 9.9. Bounded matrices	48
Corollary 9.10. Schur products	49
Example 9.11. Schur products with dyads	49
§ 10. Absolute Boundedness	50
Example 10.1. Hilbert-Toeplitz matrix	51
Example 10.2. Discrete Fourier transform	52
Example 10.3. Direct sum matrix	52
Example 10.4. Divisible spaces	53
Theorem 10.5. Characterization	54
Corollary 10.6. Adjoints	55

Theorem 10.7. Products	55
Theorem 10.8. Non-invertibility	56
Theorem 10.9. Schur products	57
Example 10.10. Unbounded Schur products	57
Remark 10.11. Tensor quotients	58
§ 11. Carleman Kernels	59
Example 11.1. Absolutely bounded, not Carleman	59
Theorem 11.2. Inclusion relations	61
Example 11.3. Counterexamples	62
Theorem 11.4. Strong boundedness	64
Theorem 11.5. Carleman functions	64
Theorem 11.6. Right ideal	66
Corollary 11.7. Non-invertibility	66
Problem 11.8. Right ideal	67
Theorem 11.9. Co-boundedness	68
Theorem 11.10. Hermitian kernels	69
Theorem 11.11. Normal Carleman adjoints	69
Problem 11.12. Normal integral adjoints	70
Example 11.13. Non-Carleman integral adjoint	70
§ 12. Compactness	72
Lemma 12.1. Convolution kernels on L^1	72
Theorem 12.2. Convolution kernels on L^2	72
Corollary 12.3. Compactness	73
Example 12.4. Non-integral, compact	74
§ 13. $\langle 2, 1 \rangle$ Compactness	76
Lemma 13.1. Large characteristic functions	77
Lemma 13.2. Absolute continuity	77
Example 13.3. Non-absolute continuity	80
Lemma 13.4. Hille-Tamarkin kernels	80
Example 13.5. Non-Hille-Tamarkin kernels	81
Remark 13.6. Hille-Tamarkin operators	82
Lemma 13.7. Integrable kernels	83
Theorem 13.8. $\langle 2, 1 \rangle$ compactness	84
Corollary 13.9. Hilbert-Schmidt approximation	84
§ 14. Essential Spectrum	85
Example 14.1. Tensor products and spectra	86
Theorem 14.2. Atkinson's theorem	87
Theorem 14.3. Normal operators	88
Theorem 14.4. A and A^*A	88
Corollary 14.5. A and AA^*	89
Theorem 14.6. Orthonormal sequences, left	89
Corollary 14.7. Orthonormal sequences, right	89
Remark 14.8. Absolute boundedness and invertibility	89
Remark 14.9. Non-emptiness	90
Theorem 14.10. Normal Carleman operators	91

Lemma 14.11. Nearly invariant subspaces	91
Remark 14.12. Hilbert-Schmidt strengthening	91
Theorem 14.13. Weyl-von Neumann theorem	93
Problem 14.14. Normal generalization	94
Problem 14.15. Quasidiagonal generalization	94
§ 15. Characterization	95
Theorem 15.1. Integral operator, essential spectrum	96
Remark 15.2. Right versus left	97
Corollary 15.3. Unitary transforms	97
Lemma 15.4. Matrix inflations	97
Remark 15.5. Partially atomic spaces	98
Lemma 15.6. Perturbations of Hermitian operators	98
Theorem 15.7. Carleman operator, essential spectrum	98
Corollary 15.8. Carleman if and only if integral	99
Example 15.9. Unilateral shift	99
Example 15.10. Non-simultaneity of A and A^*	101
Theorem 15.11. Simultaneity of A and A^*	102
Corollary 15.12. Simultaneous integral representability	102
Lemma 15.13. Large 0 direct summand	102
Theorem 15.14. Simultaneous Carleman representability	103
Corollary 15.15. Simultaneous Carleman if and only if integral	103
Problem 15.16. Absolutely bounded operators	103
Theorem 15.17. Essential non-invertibility of $A^*A + AA^*$	103
Theorem 15.18. Absolutely bounded operators	104
§ 16. Universality	105
Theorem 16.1. Universal integral operators	105
Remark 16.2. Universal Carleman operators	108
Problem 16.3. Small unitary transforms	108
Lemma 16.4. Operator norm	108
Theorem 16.5. Universally absolutely bounded matrices	109
§ 17. Recognition	111
Remark 17.1. Pointwise domination	111
Theorem 17.2. Carleman characterization	112
Corollary 17.3. Hilbert-Schmidt characterization	114
Problem 17.4. Integral characterization	114
Theorem 17.5. Orthonormal Carleman characterization	114
Problem 17.6. Orthonormal integral characterization	115
Theorem 17.7. Null-sequence Carleman characterization	116
Appendix A. Finiteness and Countability Conditions	119
Appendix B. Pointwise Unbounded Bounded Kernels	121
Theorem B1. Pointwise unbounded subkernels	121
Corollary B2. Subrectangles	123
Corollary B3. Square integrable kernels	123
Problem B4. Unbounded subkernels	124

Appendix C. Riemann-Lebesgue Lemma	125
Notes	126
