

# Contents

1. Boundedness and Compactness	1
1. A theorem of Parrott	2
2. Nehari's theorem on bounded Hankel matrices	4
3. Hartman's theorem on compact Hankel operators	6
4. Kronecker's theorem on finite rank Hankel matrices	6
5. Widom's characterisation of bounded and compact Hankel measures	7
6. Carleson measures	9
Notes	10
Problems	11
2. Unitary Equivalence	13
1. Hankel integral operators $S_k$	13
2. Equivalent definitions	15
3. A diagram linking $H^2$ , $H^2(\mathbb{R})$ , $L^2(\mathbb{R}_+)$ , $L^2(\nu)$ and $L^2(\mu)$	16
4. Nuclear positive Hankel operators	16
5. Widom's characterisation of bounded and compact $S_k$	17
6. Carleman's operator	18
Notes	19
Problems	19
3. Nuclearity	21
1. Nuclear $S[\mu]$	21
2. The Besov space $A_1^1$	22
3. Peller's characterisation of nuclearity	22
4. $\eta$ -lattices in the upper half plane $U$	24
5. The Coifman Rochberg decomposition for $H^1(U)$	25
6. Coifman and Rochberg's theorem on nuclearity	29
7. Measures for nuclear Hankel operators	30

8.	Equivalent norms for $A_1^1$	31
	Notes	31
	Problems	31
4.	Factorisation of the Symbol	33
1.	Beurling's theorem	33
2.	Partial isometries	33
3.	The spectra of compression operators, $\text{pr}_K(h)$	35
4.	Clark's theorem on closed range	36
5.	Interpolating Blaschke products $u$	37
6.	$\ S\ $ , $\ S\ _p$ and $\ S\ _e$ for $S = S_{z\bar{u}h}$	38
7.	Almost diagonal Hankel operators	39
	Notes	41
	Problems	42
5.	Best approximation and $s$ -numbers	43
1.	Characterisation of $s$ -numbers	43
2.	Berg's theorem on best compact Hankel approximation	46
3.	Best approximation by $H^\infty + C$	47
4.	Unique best $H^\infty$ approximation	47
5.	The hereditary property for quasicontinuous functions	48
6.	Unimodular quasicontinuous functions	49
7.	A hereditary theorem of Peller and Hrušev	51
	Notes	53
	Problems	54
6.	Spectral theory	55
1.	Non Fredholmness	55
2.	A spectral theorem of Hartman and Wintner	55
3.	The Hankel operators with sequence $\xi^{n/n+1}$ , $ \xi  = 1$	56
4.	Magnus' theorem on the spectrum of Hilbert's matrix	58
5.	Hankel operators with piecewise continuous symbols	59
6.	Lindelöf's theorem	60

Notes	60
Problems	61

7. $C^*$ -algebraic methods	62
1. Slowly oscillating functions and $\mathcal{A} = C^*(\{Q, R, \chi, SO\})$	62
2. Generators of $C([0, 1], M_2)$	63
3. The local ideals	65
4. Douglas' localisation theorem	66
5. A representation of $\mathcal{A}/\mathcal{K}$	67
6. Hankel operators with PSO symbol	68
7. Singular integral operators with PSO kernel	70
8. Toeplitz operators with PSO symbol	70
9. Carleman shift operators with slowly oscillating coefficients	71

Notes	73
-------	----

Problems	73
----------	----

8. Products of Hankel operators	75
1. Criteria for compact products	75
2. A theorem of Axler, Chang, Sarason and Volberg	78

Notes	78
-------	----

Appendix	79
----------	----

1. Compactness of $M_\varphi Q - Q M_\varphi$ for $SO_\alpha$	79
2. Fefferman's theorem on BMO	80
3. Sarason's theorem on VMO	80
4. The inclusion of SO by VMO	80
5. The Fredholm index of $T_\psi$ for $\psi$ in $H^\infty + C$	81

Bibliography	82
