

CONTENTS

| | |
|--|----|
| Introduction | xi |
| Chapter 1. Background information | 1 |
| §1. On Noetherian operators | 1 |
| §2. On the operator of singular integration | 15 |
| §3. On the shift function and shift operator | 26 |
| §4. On C^* -algebras | 33 |
| Chapter 2. Noetherity criterion and a formula for the index of a singular integral functional operator of first order in the continuous case | 37 |
| §1. Criterion of Noetherity for singular integral functional operators of first order with orientation-preserving shift | 40 |
| 1.1. Criterion of Noetherity for the singular integral operator with a Cauchy kernel | 40 |
| 1.2. Abstract scheme for the study of the Noetherity of paired operators | 41 |
| 1.3. A criterion of Noetherity for singular integral functional operators of the first order in the case of a Carleman shift | 44 |
| 1.4. A criterion of Noetherity for singular integral functional operators of first order in the case of a non-Carleman shift with a finite number of fixed points | 46 |
| 1.5. Noetherity criterion for a singular integral functional operator of first order in the case of a non-Carleman shift having a finite number of periodic points | 55 |
| 1.6. Noetherity criterion for a singular integral functional operator of first order with a shift having any non-empty set of periodic points | 56 |
| §2. The calculation of the index of a singular integral functional operator of the first order with a shift preserving the orientation | 60 |
| 2.1. The index of a singular integral operator with a Cauchy kernel | 60 |

| | |
|--|----|
| 2.2. The index of a singular integral functional operator of the Kveselava-Vekua type | 62 |
| 2.3. The calculation of the index of a singular integral functional operator of the first order in the case of Carleman shift | 66 |
| 2.4. The calculation of the index of a singular integral functional operator of the first order with a shift having a finite number of fixed points | 71 |
| 2.5. The calculation of the index of a singular integral functional operator of the first order with a shift having a finite number of periodic points with multiplicity k | 72 |
| 2.6. The calculation of the index of a singular integral functional operator of the first order with a shift having an arbitrary non-empty set of periodic points | 73 |
| §3. The Noetherity criterion and the index formula for a singular integral functional operator of the first order with a shift changing the orientation | 81 |
| 3.1. Reduced and associated operators. The connection between the Noetherity of a singular integral functional operator with a shift changing the orientation and the Noetherity of a reduced operator | 81 |
| 3.2. Noetherity criterion and index formula for a singular integral functional operator of the first order with a Carleman shift changing the orientation | 84 |
| 3.3. Noetherity criterion and index formula for a singular integral functional operator of the first order with a non-Carleman shift changing the orientation | 86 |
| § 4. References and a survey of similar or closed results | 89 |
| 4.1. On weighted-shift operators | 89 |
| 4.2. On the one-sided invertibility of functional operators and on the semi-Noetherity of singular integral functional operators of the first order in the space $L_p(\Gamma)$ | 93 |
| 4.3. On functional and singular integral functional operators of the first order in Hölder and Orlicz spaces | 94 |
| 4.4. On functional and singular integral functional operators of the first order with a non-invertible shift | 96 |

| | |
|--|------------|
| 4.5. On singular integral functional operators of the first order with a shift which has an empty set of periodic points | 97 |
| 4.6. For the question of invertibility and one-sided invertibility of singular integral functional operators on a closed contour | 98 |
| Chapter 3. The Noether theory of a singular integral functional operator of finite order in the continuous case | 101 |
| § 1. The Noetherity criterion and the index formula for a system of singular integral equations with a Cauchy kernel and continuous coefficients on a closed contour | 104 |
| § 2. Theorems concerning decreasing the order of functional and singular integral operators | 107 |
| § 3. Noetherity criterion and a formula for the index for systems of singular integral equation with a Carleman shift | 113 |
| 3.1. The case of an orientation-preserving Carleman shift | 113 |
| 3.2. The case of an orientation-changing Carleman shift | 117 |
| § 4. An invertibility criterion for a matrix functional operator with a non-Carleman shift | 118 |
| 4.1. The reasons for the necessary conditions of invertibility | 118 |
| 4.2. Invertibility conditions in the cases $\kappa(a) = 0$ and $\kappa(a) = n$ | 120 |
| 4.3. On the invertibility of a canonical functional operator with a matrix function α -reducible to the normal form | 121 |
| 4.4. α -reducibility of a block triangular matrix to the normal form | 123 |
| 4.5. A normalizable matrix of solutions of a functional equation system. A connection between α -reducibility and normalizability | 124 |
| 4.6. Lemma on the existence of a normalizable matrix of continuous solutions of a functional equation | 127 |
| 4.7. Local α -reducibility | 133 |
| 4.8. On local properties of fundamental solutions | 134 |
| 4.9. A fundamental system of solutions and its connection with the invertibility of the canonical operator | 137 |
| 4.10. A connection between the normalizability and existence of a fundamental system of solution | 140 |

| | |
|---|-----|
| 4.11. A criterion of invertibility for a canonical functional operator | 141 |
| 4.12. A criterion for the invertibility of a functional operator of the order m . The case of a finite set of fixed points of shift | 142 |
| 4.13. A matrix functional operator of the order m belongs to the set $\tilde{M}(S)$ | 145 |
| 4.14. An invertibility criterion for a functional operator of the order m . The case of a finite set of periodic points of the shift | 146 |
| § 5. Noether theory for singular integral functional operators of superior orders | 148 |
| 5.1. The case of a shift that preserves the orientation on Γ and has a finite number of fixed points | 148 |
| 5.2. The case of a shift preserving the orientation on Γ with periodic points | 151 |
| 5.3. The case of a shift changing the orientation on Γ | 152 |
| § 6. References and a survey of similar results | 154 |
| 6.1. The invertibility of the matrix functional operator and its connection with the spectral theory of dynamics systems and the multiplicative ergodic theorem | 154 |

Chapter 4. The Noether theory of singular integral functional operators with continuous coefficients on a non-closed contour 161

| | |
|---|-----|
| § 1. The Noetherity criterion and the index formula for a singular integral operator with continuous coefficients on a non-closed contour | 164 |
| 1.1. An abstract scheme for the study of the Noetherity of paired operators on a non-closed contour | 164 |
| 1.2. The reduction of the $(I - S^2)$ -Noetherity of a singular integral operator with Cauchy kernel and continuous coefficients on the segment $[0, 1]$ to the continuous invertibility of a singular integral operator with constant coefficients | 168 |
| 1.3. The spectral representation of the operator S . An invertibility criterion for singular integral operators with constant coefficients | 169 |
| 1.4. The Noetherity criterion and the index formula for a singular integral operator with Cauchy kernel | 172 |

| | |
|---|------------|
| 1.5. Operators with fixed singularities | 177 |
| 1.6. The Noetherity criterion and the index formula for operators of the algebra Σ | 180 |
| 1.7. Systems of singular integral equations on a non-closed contour | 184 |
| § 2. The Noetherity criterion and the index formula for singular integral functional operators with continuous coefficients on a non-closed contour | 186 |
| 2.1. On the application of the abstract scheme for the study of Noetherity | 186 |
| 2.2. Some more results about operators with fixed singularities | 188 |
| 2.3. The Noetherity criterion for the operator N | 192 |
| 2.4. The index formula for the operator N | 194 |
| 2.5. The Kveselava-Vekua operator on a non-closed contour | 198 |
| § 3. Systems of singular integral operators with shift on a non-closed contour .. | 202 |
| 3.1. The criterion for Noetherity | 202 |
| 3.2. The calculation of the index | 204 |
| 3.3. The case of orientation-changing shift | 207 |
| § 4. References and a survey of closely related results | 208 |
| 4.1. On the question of invertibility and one-sided invertibility for singular integral functional operators on a non-closed contour | 209 |
| Chapter 5. The Noether theory in algebras of singular integral functional operators | 211 |
| § 1. C^* -algebras of singular integral operators | 214 |
| 1.1. General scheme | 214 |
| 1.2. Algebras of an SIO on a closed contour | 217 |
| 1.3. Algebras of an SIO on a non-closed contour | 218 |
| § 2. C^* -algebras of singular integral operators with a Carleman shift | 221 |
| 2.1. The case of a closed contour and an orientation-preserving shift | 221 |
| 2.2. The case of a closed contour and an orientation-changing shift | 222 |
| 2.3. The case of a non-closed contour and an orientation-changing Carleman shift | 223 |

| | |
|---|-----|
| § 3. C^* -algebras of singular integral operators with non-Carleman shift which has periodic points | 228 |
| 3.1. The case of a closed contour | 228 |
| 3.2. The case of a non-closed contour | 232 |
| 3.3. Discrete operators | 235 |
| § 4. Further development of a local method for studying the Noetherity of bounded linear operators of non-local type and its applications. Commentaries to the literature | 238 |
| 4.1. The local method (see Ju. I. Karlovich - V. G. Kravchenko 8)) | 239 |
| 4.2. On the local methods of Ju. I. Karlovich and their applications | 248 |
| 4.3. On the factoribility of almost-periodic matrix functions and the Noetherity of certain classes of convolution type operators | 257 |
| References | 265 |
| Subject Index | 287 |
