<b>Introduction</b> . . . . .	VII
<b>1 Invertibility in Banach algebras</b>	
1.1 Banach algebras and $C^*$ -algebras . . . . .	1
1.2 Linear operators . . . . .	4
1.3 Stability of operator sequences . . . . .	7
1.4 Local principles . . . . .	12
1.5 The finite section method for Toeplitz operators . . . . .	17
1.6 A general invertibility scheme . . . . .	24
1.7 Norm-preserving localization . . . . .	32
1.8 Exercises . . . . .	36
1.9 Comments and references . . . . .	39
<b>2 Spline spaces and Toeplitz operators</b>	
2.1 Singular integral operators-constant coefficients . . . . .	46
2.2 Piecewise constant splines . . . . .	54
2.3 Algebras of Toeplitz operators (Basic facts) . . . . .	59
2.4 Discretized Mellin convolutions . . . . .	64
2.5 Algebras of Toeplitz operators (Fredholmness) . . . . .	72
2.6 General spline spaces . . . . .	79
2.7 Spline projections . . . . .	83
2.8 Canonical prebases . . . . .	91
2.9 Concrete spline spaces . . . . .	96
2.10 Concrete spline projections . . . . .	102
2.11 Approximation of singular integral operators . . . . .	105
2.12 Proofs . . . . .	126
2.13 Exercises . . . . .	138
2.14 Comments and references . . . . .	142
<b>3 Algebras of approximation sequences</b>	
3.1 Algebras of singular integral operators . . . . .	146
3.2 Approximation using piecewise constant splines . . . . .	153
3.3 Approximation of homogeneous operators . . . . .	163

3.4	The stability theorem . . . . .	171
3.5	Basic properties of approximation sequences . . . . .	175
3.6	Proof of the stability theorem . . . . .	189
3.7	Sequences of local type . . . . .	197
3.8	Concrete approximation methods . . . . .	205
3.9	Exercises . . . . .	218
3.10	Comments and references . . . . .	222
<b>4</b>	<b>Singularities</b>	
4.1	Approximation of operators in Toeplitz algebras . . . . .	228
4.2	Multiindexed approximation methods . . . . .	240
4.3	Approximation of singular integral operators . . . . .	255
4.4	Approximation of compound Mellin operators . . . . .	260
4.5	Approximation over unbounded domains . . . . .	270
4.6	Exercises . . . . .	277
4.7	Comments and references . . . . .	279
<b>5</b>	<b>Manifolds</b>	
5.1	Algebras of singular integral operators . . . . .	281
5.2	Splines over homogeneous curves . . . . .	289
5.3	Splines over composed curves . . . . .	299
5.4	The stability theorem . . . . .	306
5.5	A Galerkin method . . . . .	320
5.6	Exercises . . . . .	335
5.7	Comments and references . . . . .	336
<b>6</b>	<b>Finite sections</b>	
6.1	Finite sections of singular integrals . . . . .	337
6.2	Finite sections of discrete convolutions . . . . .	344
6.3	Around spline approximation methods . . . . .	350
<b>Bibliography</b>	. . . . .	356
<b>Index</b>	. . . . .	371
