Invited lectures

| | |
|--|-----|
| A. V. Balakrishnan, Boundary control of parabolic equations: L - Q - R theory . . . | 11 |
| A. Bensoussan and J.-L. Lions, On the asymptotic behaviour of the solution of quasi-variational inequalities | 25 |
| L. Bittner, Extension theorems of Hahn-Banach type and monotone operators . . | 41 |
| F. L. Chernousko, Approximation of integral functionals and numerical solution of variational problems | 51 |
| S. Fučík, Variational noncoercive nonlinear problems | 61 |
| R. Gabasov and F. M. Kirillova, On the theory of optimal control of dynamical systems | 71 |
| H. Gajewski, On Cauchy's problem for the spatially one-dimensional Zakharov system | 79 |
| K. Gröger, Evolution equations in the theory of plasticity | 97 |
| I. Hlaváček, Dual finite element analysis for some unilateral boundary value problems | 109 |
| P. Husták, M. Kubiček, I. Marek and M. Marek, Bifurcation in reaction-diffusion systems | 117 |
| R. Kluge, On some parameter determination problems and quasi-variational inequalities | 129 |
| R. Kluge and H. Langmach, On the determination of some rheologic properties of mechanical media | 141 |
| J. Kolomý, Some methods for finding of eigenvalues and eigenvectors of linear and nonlinear operators | 159 |
| A. Langenbach, Bifurcation under nonlinear loading | 169 |
| H. Langmach, On the determination of functional parameters in some parabolic differential equation | 175 |
| J. Naumann, On second order evolution inequalities of Volterra type | 185 |
| J. Nečas and L. Trávníček, Variational inequalities of elasto-plasticity with internal state variables | 195 |

| | |
|--|-----|
| D. Pascali, On nonlinear divergence equations | 205 |
| W. V. Petryshyn, Nonlinear eigenvalue problems and the existence of nonzero fixed points for A-proper mappings | 215 |
| S. Prößdorf und B. Silbermann, Gestörte Projektionsverfahren und einige ihrer Anwendungen | 229 |
| K. R. Schneider, On a class of nonlinear eigenvalue problems with non-invertible linear part | 239 |
| I. Singer, Some classes of non-linear operators generalizing the metric projections onto Čebyšev subspaces | 245 |
| G. Stoyan, Numerical experiments on the identification of heat conduction coefficients | 259 |
| G. Telschow, On an iteration procedure | 269 |
| L. v. Wolfersdorf, Necessary optimality conditions for control processes with singular integral equations and elliptic equations | 279 |
| K. Zacharias, On the numerical treatment of wave-envelope equations | 293 |

Communications

| | |
|---|-----|
| B. Brass, An obstacle problem and its solution by quasi-variational inequalities | 303 |
| G. Bruckner, On the speed of convergence of iteration methods | 309 |
| F. Häfner and R.-J. Giesel, Numerical results of parameter identification in partial differential equations | 315 |
| E. Krauß, A general Hahn-Banach type theorem | 323 |

Abstracts of communications

| | |
|--|-----|
| H. Benker, On a problem of optimal control in abstract spaces | 337 |
| L. Berg, On the stability of discretization methods for boundary value problems | 341 |
| J. Daneš, Two remarks on functional analysis | 345 |
| Z. Denkowski, On a relation between (K)- and (Q)-convergence of a net of sets | 347 |
| M. Fabian, Theory of Fréchet cones and nonlinear analysis | 349 |
| S. Gähler, Optimality conditions in polyoptimization | 353 |
| M. Goebel, On optimal control of elliptic systems | 357 |
| R. Hünlich, The buckling of axially compressed circular cylindrical shells with free edges | 361 |
| J. Kačur, Stabilization of solutions of abstract parabolic equations | 365 |
| R. Kodnár, Non-linear problems of the orthogonal anisotropic shallow shells | 367 |

| | |
|---|-----|
| E. Kozakiewicz, Некоторые сравнительные теоремы для нелинейных дифференциальных неравенств с последствием | 371 |
| A. Kufner, On some type of nonlinear equations | 375 |
| O. Lange, On the question of controllability of nonlinear dynamical systems . . . | 377 |
| J. Lovíšek, Approximation of the Signorini problem in plane elastostatics | 381 |
| S. Meyer, An asymptotic expansion of the solution of ordinary differential equations containing a small parameter in the highest derivative | 385 |
| E. Miersemann, On eigenvalue equations in convex cones | 389 |
| K. Morgenthal, Asymptotic behaviour of some function systems | 393 |
| K. R. Schneider and B. Wegner, On the asymptotic behaviour of the period of limit cycles bifurcating from a critical point | 397 |
| W. Sprößig, Methods of function theory for the solution of non-linear partial differential equations | 399 |
| F. Unger, On the solution of a boundary control problem at the stationary heat transfer equation | 403 |
| W. Weinelt, On the numerical solution of a variational inequality | 405 |
| J. Wolska-Bochenek, On some inverse problem for a system of one-dimensional diffusion equations | 409 |
