

# CONTENTS

Transition of the Quasi-Levels in the Discrete Spectrum of the Schrödinger Operator under Strong Perturbations of the Potential A. G. Alenitsyn . . . . .	1
A Criterion for the Existence of the Complete Wave Operators in the Theory of Scattering with Two Spaces M. Sh. Birman . . . . .	17
The Inverse Problem for the Wave Equation with an Unknown Source A. S. Blagoveshchenskii . . . . .	23
On the Various Formulations of the One-Dimensional Inverse Problem for the Telegraph Equation A. S. Blagoveshchenskii . . . . .	35
Quantitative Characteristics of Singular Measures V. V. Borzov . . . . .	37
Spectral Identities and the Trace Formula in the Friedrichs Model V. S. Buslaev . . . . .	43
Perturbation of the Spectrum of the One-Dimensional Self-Adjoint Schrödinger Operator with a Periodic Potential V. A. Zheludev . . . . .	55
The Field of a Point Source Located Outside a Convex Curve I. A. Molotkov . . . . .	77
Criteria for the Boundedness and Complete Continuity of Certain Imbedding Operators V. L. Oleinik and B. S. Pavlov . . . . .	101
A Uniqueness Theorem for Functions with Positive Imaginary Part B. S. Pavlov . . . . .	107
Application of the Method of Standard Comparison Problems to Perturbations of the Coulomb Field. The Discrete Spectrum S. Yu. Slavyanov . . . . .	113
