

TABLE OF CONTENTS

Preface	ix
1. Transport Theory	1
1.1 Linear Transport Theory	1
1.2 Nonlinear and Linearized Transport Theory	4
1.3 References, Preview, and Notation	5
2. Time-Independent Transport Equations	7
2.1 One-Dimensional Transport Equations	7
2.2 Functional Formulation	14
2.3 Historical Remarks	19
3. Model Case: Full-Range Theory	27
3.1 Spectral Representation	27
3.2 Dispersion Function and Spectral Measure	40
3.3 Representations on <i>Lip</i> -Spaces	47
4. Model Case: Half-Range Theory	54
4.1 Decompositions of the Hilbert Spaces	54
4.2 Representations of the Extension Operators	65
5. Factorization of Operator-Valued Functions	88
5.1 Factorization of the Symbol	88
5.2 Application to a Half-Space Transport Problem	97
6. Boundary Value Problems	102
6.1 Regular Problems	102
6.2 Classical Solutions	118
6.3 Distributional Data	124
6.4 Transport Problems in General Domains	129
7. Nonhermitian Collision Operators	137
7.1 Nonhermitian Collision Operators	137
7.2 Indefinite Collision Operators	153

8. Nonhermitian Coordinate Operators	163
8.1 Full-Range Theory	163
8.2 Half-Range Theory	176
9. Degenerate Spectra	189
9.1 Multiple Eigenvalues	189
9.2 Vanishing Eigenvalues	215
10. Other Generalizations	222
10.1 Nondegenerate Scattering Kernels	222
10.2 Vector-Valued Case	235
10.3 Unbounded Operators	242
11. Time-Dependent Transport Equations	249
11.1 Two Fundamental Problems	249
11.2 Functional Formulation	252
11.3 Auxiliary Theorems	254
11.4 Historical Remarks	259
12. Reactor Problem	261
12.1 Collisionless Transport Operator	261
12.2 Streaming Operator	266
12.3 Transport Operator	274
13. Multiple Scattering Problem	292
13.1 Collisionless Transport Operator	292
13.2 Penetration Operator	299
13.3 Transport Operator	304
13.4 Scattering Theory	310
13.5 Inverse Problems	316
References	321
List of Symbols	329
Author Index	335
Subject Index	337
