Preface	ix
Comments on notations	xiii
 Chapter 1 Some Spaces of Functions and Distributions	
1.1. Calculus on Euclidean Spaces	1
1.2. Distributions, Fourier Transforms	5
1.3. Estimates of Functions and their Fourier Transforms	12
1.4. Rapidly Decreasing Distributions	24
 Chapter 2 Real Interpolation of Banach Spaces	
2.1. Banach Spaces and Linear Operators	29
2.2. The K -Functional	36
2.3. The Mean and the Trace Method	41
2.4. Comparison and Duality of Interpolation Spaces	46
2.5. The Reiteration Theorem	49
2.6. Interpolation of Operators	52
2.7. Quasi-Linearizable Couples of B -Spaces	54
2.8. Friedrichs Couples	59

Chapter 3 **C_0 -Groups and Functional Calculi**

3.1. Submultiplicative Functions and Algebras Associated to them	75
3.2. C_0 -Groups: Continuity Properties and Elementary Functional Calculus	85
3.3. The Discrete Sobolev Scale Associated to a C_0 -Group	94
3.4. Besov Spaces Associated to a C_0 -Group	122
3.5. Littlewood-Paley Estimates	136
3.6. Polynomially Bounded C_0 -Groups	148
3.7. C_0 -Groups in Hilbert Spaces	160

Chapter 4**Some Examples of C_0 -Groups**

4.1. Weighted Sobolev and Besov Spaces	171
4.2. C_0 -Groups Associated to Vector Fields	178

Chapter 5**Automorphisms Associated to C_0 -Representations**

5.1. Regularity and Commutators	193
5.2. Regularity of Fractional Order	199
5.3. Regularity Preserving and Regularity Improving Operators	209
5.4. The spaces $\mathcal{M}_{s,p}^r(\mathbb{R}^n)$	216
5.5. Commutator Expansions	222
5.A. Appendix: Differentiability Properties of Operator-Valued Functions	231

Chapter 6**Unitary Representations and Regularity**

6.1. Remarks on the Functional Calculus for Self-adjoint Operators . . .	236
6.2. Regularity of Self-adjoint Operators with respect to Unitary C_0 -Groups	242
6.3. Unitary Groups in Friedrichs Couples	253
6.4. Estimates on $\varphi(H_1) - \varphi(H_2)$	260
6.A. Appendix: Remarks on the Functional Calculus Associated to \mathcal{W} in $B(\mathcal{H})$	264

Chapter 7**The Conjugate Operator Method**

7.1. Locally Smooth Operators and Boundary Values of the Resolvent	272
7.2. The Mourre Estimate	287
7.3. The Method of Differential Inequalities	299
7.4. Self-adjoint Operators with a Spectral Gap	308
7.5. Hamiltonians Associated to Symmetric Operators in Friedrichs Couples	312
7.6. The Limiting Absorption Principle for Some Classes of Pseudodifferential Operators	330
7.A. Appendix: The Gronwall Lemma	349
7.B. Appendix: A Counterexample. Optimality of the Results on the Limiting Absorption Principle	350
7.C. Appendix: Asymptotic Velocity for $H = h(P)$	355

Chapter 8**An Algebraic Framework for the Many-Body Problem**

8.1. Self-adjoint Operators Affiliated to C^* -Algebras	359
8.2. Tensor Products	372
8.3. ϱ -Functions in a C^* -Algebra Setting	380
8.4. Graded C^* -Algebras	391

Chapter 9**Spectral Theory of N -Body Hamiltonians**

9.1. Tensorial Factorizations of $\mathcal{H}(X)$	401
9.2. Semicompact Operators	403
9.3. The N -Body Algebra	409
9.4. Non-Relativistic N -Body Hamiltonians	414
9.A. Appendix: Remarks on the $\mathcal{C}^{1,1}$ Property	430

Chapter 10**Quantum-Mechanical N -Body Systems**

10.1. Clustering of Particles	433
10.2. Quantum-Mechanical N -Body Hamiltonians	439
Bibliography	445
Notations	453
Index	457
