Preface	vii
Chapter 1	
Some aspects of operator theory and the theory of analytic functions	
1. On spectral functions of Hermitian operators	1
2. Representation of a simple Hermitian operator whose deficiency index is (1,1)	8
3. On the spectrum of self-adjoint extensions of a Hermitian operator whose deficiency index is (1,1)	17
4. Some aspects of the theory of analytic functions	21
Chapter 2	
Entire operators whose deficiency index is (1,1)	
1. Quasiregular gauge	48
2. Principal theorem on regular points of $f_M(z)$	53
3. u -regular points of a Hermitian operator	56
4. Functions $e(z)$ and $\nabla_M(z)$	59
5. Entire operators	61
6. R -functions and generalized resolvents of a Hermitian operator	68
7. On distribution functions of a Hermitian operator	82
8. Method of directing functionals	99
9. Operator, entire with respect to a generalized gauge	110
Chapter 3	
Applications of entire operator theory to some classical problems of analysis	
1. Power moment problem	120
2. Continuation problem for positive definite functions	126
3. Unitary and spiral curves	141
Appendix 1 On entire operators whose defect numbers are arbitrary	161
Appendix 2 Entire operators represented by differential operators	177
Appendix 3 On a difficult problem of operator theory and its relation to classical analysis	199
Comments	211
Bibliography	215
Subject index	219
