## CHAPTER 1 INTRODUCTION 1

- 1.1 *Why a new book on probability?* 1
- 1.2 *What are the mathematical differences?* 2
- 1.3 *What are the conceptual differences?* 3
- 1.4 *Preliminary clarifications* 5
- 1.5 *Some implications to note* 7
- 1.6 *Implications for the mathematical formulation* 9
- 1.7 *An outline of the 'introductory treatment'* 11
- 1.8 *A few words about the 'critical' Appendix* 14
- 1.9 *Other remarks* 15
- 1.10 *Some remarks on terminology* 19
- 1.11 *The tyranny of language* 21
- 1.12 *References* 22

## CHAPTER 2 CONCERNING CERTAINTY AND UNCERTAINTY 24

- 2.1 *Certainty and uncertainty* 24
- 2.2 *Concerning probability* 26
- 2.3 *The range of possibility* 27
- 2.4 *Critical observations concerning the 'space of alternatives'* 32
- 2.5 *Logical and arithmetic operations* 35
- 2.6 *Assertion, implication; incompatibility* 39
- 2.7 *Partitions; constituents; logical dependence and independence* 42
- 2.8 *Representations in linear form* 48
- 2.9 *Means; associative means* 56
- 2.10 *Examples and clarifications* 59
- 2.11 *Concerning certain conventions of notation* 66

## CHAPTER 3 PREVISION AND PROBABILITY 69

- 3.1 *From uncertainty to prevision* 69
- 3.2 *Digressions on decisions and utilities* 76

- 3.3 *Basic definitions and criteria* 83
- 3.4 *A geometric interpretation: the set  $\mathcal{P}$  of coherent previsions* 89
- 3.5 *Extensions of notation* 91
- 3.6 *Remarks and examples* 92
- 3.7 *Prevision in the case of linear and non-linear dependence* 94
- 3.8 *Probabilities of events* 99
- 3.9 *Linear dependence in general* 105
- 3.10 *The fundamental theorem of probability* 111
- 3.11 *Zero probabilities; critical questions* 116
- 3.12 *Random quantities with an infinite number of possible values* 128
- 3.13 *The continuity property* 132

## CHAPTER 4 CONDITIONAL PREVISION AND PROBABILITY 134

- 4.1 *Prevision and the state of information* 134
- 4.2 *Definition of conditional prevision (and probability)* 135
- 4.3 *Proof of the theorem of compound probabilities* 136
- 4.4 *Remarks* 139
- 4.5 *Probability and prevision conditional on a given event  $H$*  140
- 4.6 *Likelihood* 142
- 4.7 *Probability conditional on a partition  $\mathcal{H}$*  143
- 4.8 *Comments* 144
- 4.9 *Stochastic dependence and independence; correlation* 146
- 4.10 *Stochastic independence among (finite) partitions* 149
- 4.11 *On the meaning of stochastic independence* 150
- 4.12 *Stochastic dependence in the direct sense* 152
- 4.13 *Stochastic dependence in the indirect sense* 153
- 4.14 *Stochastic dependence through an increase in information* 154
- 4.15 *Conditional stochastic independence* 156
- 4.16 *Non-correlation; correlation (positive or negative)* 161
- 4.17 *A geometric interpretation* 166
- 4.18 *On the comparability of zero probabilities* 173
- 4.19 *On the validity of the conglomerative property* 177

## CHAPTER 5 THE EVALUATION OF PROBABILITIES 179

- 5.1 *How should probabilities be evaluated?* 179
- 5.2 *Bets and odds* 179
- 5.3 *How to think about things* 183
- 5.4 *The approach through losses* 185
- 5.5 *Applications of the loss approach* 191
- 5.6 *Subsidiary criteria for evaluating probabilities* 198
- 5.7 *Partitions into equally probable events* 199

- 5.8 *The prevision of a frequency* 202
- 5.9 *Frequency and 'wisdom after the event'* 207
- 5.10 *Some warnings* 211
- 5.11 *Determinism, indeterminism, and other 'isms'* 216

## CHAPTER 6 DISTRIBUTIONS 221

- 6.1 *Introductory remarks* 221
- 6.2 *What we mean by a 'distribution'* 222
- 6.3 *The parting of the ways* 228
- 6.4 *Distributions in probability theory* 232
- 6.5 *An equivalent formulation* 241
- 6.6 *The practical study of distribution functions* 252
- 6.7 *Limits of distributions* 260
- 6.8 *Various notions of convergence for random quantities* 262
- 6.9 *Distributions in two (or more) dimensions* 269
- 6.10 *The method of characteristic functions* 280
- 6.11 *Some examples of characteristic functions* 287
- 6.12 *Some remarks concerning the divisibility of distributions* 296

*Index* 299
